Office 365 Update-

- Pricing has come back- it's free to all faculty and staff. (Exchange, email, calendaring, link, IM, chat, conferencing, Sharepoint, Office Online)
- Services with a cost- Special quota considerations, archiving of mailboxes, extending Link,
- Talked with student leadership, and a survey that will be attached to CUSG vote to gauge interest in either Microsoft or Google.
- Still a long term conversation needed about Google vs. Office 365.
- Timing- start moving people this summer. Migrations should be easy.
- Shared Folders- Sharepoint does address this issue to some degree, but OIT will not be prepared to manage campus Sharepoint infrastructure this summer. Management can be done at the department level.
- Still negotiating a contract with Google for google apps for education.

UIS Update-

- Number of incidents is getting better and outages are getting shorter.
- Working on getting infrastructure squared away- we are making progress
- Assessment by Dell and consultants was thorough and revealed what we all new. There are a lot of problems at all levels and it is getting better but UIS we want is still 18 months away.

"Outsourced" projects as a service- Handout

- Set up a "grant" system for small units?
- Endorsement to move forward as a service.
- Bring to next meeting a list of what people are coming to OIT for.
    - Ex. Contest for NSF grant on the CU campus, we've been approached to put order around the application. Scope, project, more framework, analysis.
    - Advising and identifying students who are at risk and do outreach to them. A&S advising application. – Identify requirements and come up with a solution. Analysis and project management.
