I. Introduction - The Competitive Equilibrium Model

A. Demand, Supply and Competitive Equilibrium
   1. The Meaning of Equilibrium
   2. Arbitrage
   3. Solving Linear Demand and Supply Functions for Competitive Equilibrium

B. Taxes, Subsidies and Competitive Equilibrium
   1. Introducing a Tax to the Competitive Equilibrium Model - Graphically

C. Elasticity Measures
   1. ARC Formula and Point Formula
   2. Income Elasticity
   3. Own Price Elasticity
   4. Cross Price Elasticity

II. Consumer Choice Theory

A. Introduction to the Consumer Choice Problem
   1. The Subjective Side: Consumer Tastes
   2. The Objective Side: Prices and Income
   3. The Idea of the Consumption Space
      a. Two good Case
      b. N good Case

B. The Budget Set
   1. Underlying Assumptions
   2. Importance of Budget Line
      a. Intercepts
      b. Slopes
   3. Effect of Income and Price Changes

C. Preferences and the Utility Function
   1. Five Axioms of Preference Theory
   2. Indifference Curves and the Five Axioms
      a. Marginal Rate of Substitution
      b. Perfect Substitutes, Perfects Complements, Quasi-linear Preferences, Cobb-Douglas Preferences
   3. Representation of Preferences with a Utility Function
      a. Marginal Utility
      b. Relationship Between MRS and the Marginal Utilities
D. Optimal Choice
1. Identifying the Optimal Choice Using the Budget Line and Indifference Curves
2. Comparative Statics on Optimal Choice
   a. Income Expansion Path and Engel Curve
   b. Price Offer Curve and Demand Curve
   c. Normal and Inferior Goods
3. Slutsky Decomposition of a Price Change
   a. Substitution Effect & Income Effect
   b. Normal, Inferior and Giffen Goods
   c. Hicksian Decomposition v. Slutsky
   d. Algebraic Slutsky Decomposition

E. Consumption from an Endowment
1. Budget Line
2. Net Demands
3. Price Offer Curve
4. Indices: Paasche and Laspeyres
5. Applications:
   a. Labor-Leisure Model
   b. Intertemporal Choice

F. Expected Utility
1. Probabilities and Expected Value
2. Risk and Expected Utility
3. Application: Lottery Tickets and Insurance

III. Theory of the Firm and Market Structure

A. The Production Function
1. Assumptions
2. SR v LR
3. Marginal Product
4. Isoquants
5. Returns to Scale

B. Profit Maximization
1. Short Run
2. Long Run
3. Factor Demand Curves

C. Cost Minimization and the Cost Function
1. Short Run
2. Long Run
3. The Total and Average Cost Curves
D. Competitive Profit Maximization and Supply
   1. Firm Supply
   2. Industry Supply
   3. Economic Rents

E. Monopoly
   1. Market Power
   2. Profit Maximization of the Monopolist

F. Oligopoly
   1. Cournot Model
   2. Bertrand Model
   3. Collusion

IV. General Equilibrium and Welfare Economics

A. Introduction to General Equilibrium (Without Production)
   1. Two Persons that Consume From an Endowment
   2. Edgeworth Box
   3. Walrasian Equilibrium

B. Welfare Implications of Competitive Equilibrium
   1. Gains From Trade - Consumer Surplus and Producer Surplus
   2. Geometric Representation and Calculation of CS and PS for Linear Demand and Supply
   3. Connection Between Maximizing the Gains from Trade and Pareto Efficiency
   5. Welfare Effect of Monopoly v. Competition
   6. Externalities and Public Goods
