Office Hours
MW 2-3 and Thurs 10:30-11:30
It is very easy to schedule appointments outside of office hours with me—I am almost always in my office during normal business hours. Just send email or talk to me before or after class.

Course Prerequisite
This class requires previous completion of Economics 3818, Intro to Statistics, or the equivalent.

Course Description
The goal of this course is to teach you how to analyze data in order to obtain meaningful inferences, in other words, to use data to say something informative about interesting questions. Because these are skills that are best learned by doing, this requires that students develop facility with a statistical software package. In this course, we will use STATA, a package particularly well suited for empirical economics analysis. While students will exert a fair amount of energy mastering STATA in order to follow the lectures and complete the assignments in this course, it is important to remember that learning STATA commands is only a means to an end, and that the key focus of this course is develop skills in econometric analysis and interpretation.

Course Materials

Textbook:
A course pack developed by Prof. Brian Cadena serves as an informal textbook. It is available in electronic form on the CULearn website. Additionally, hard copies are available at the CU Bookstore.

Stata Support:
Web Links on the course website provide access to additional on-line STATA help guides and training

Software:
Students are not required to purchase their own copies of STATA. You can access STATA on the computers in this classroom or in the computer lab in the basement of the economics building. Note that the economics building is closed on weekends, but remains open until 10pm on weekdays. If you chose to purchase your own copy of STATA, you qualify for a substantial discount through the University’s GradPlan. Information is available at:
http://www.colorado.edu/its/licenses/stata.html. Please note that Small Stata is insufficient for
this course.  2009 prices for Stata/IC (Intercooled Stata) license were $98 for 1 year and $65 for 6 months.

Hardware:
You will find it useful to bring a USB memory stick to class to store copies of programs and log files from our work in class.

Course Requirements

Attendance:  Attendance is absolutely crucial to success in this class.  In order to re-enforce the importance of attendance, it will be factored into final grades.  **Attendance will be taken regularly and any student missing more than 20% (3 weeks of class, or 9 class meetings) of the course’s scheduled classes will receive a failing grade.**  To be clear, these absences are intended to cover both valid (illness, car breaking down) and invalid reasons for missing class.  Excused absences will therefore not be granted.  I reserve the right to record an absence for students who spend substantial class time on non-class activities.

Exams:  Two midterms and a final exam.  The first midterm is scheduled for Mon, Sept 20.  The second midterm is scheduled for Fri, Oct 22.  The final is scheduled for Sat, Dec 11 4:30-7:00.

Research Paper and Presentation: The goal of this course is to train you to perform and interpret original analyses of economic data.  To that end, you will complete one independent research project, using the skills taught in this course.  You will write a paper (6-8 pages, double-spaced, including figures and tables) on a topic of interest to you, focusing on original analysis of relevant data.  Some course time will be spent teaching you how to download and analyze U.S. Census data, and many students will formulate a research question that can be investigated using Census data.  Students are, however, free to pursue other data sources on topics of interest.  I can provide a certain amount of direction, but ultimately students are responsible for obtaining the data they use, loading it into STATA, and manipulating it into a usable format.

I will hold individual meetings the first week of November (11/1-11/5) to make sure that you have found an appropriate topic and data set and provide some individual guidance (class will be cancelled during the week to allow for individual meetings during class time).

During the final 2 weeks of the course (11/29-12/10), each student will give a 10-12 minute presentation of his or her research project.  The research paper is due on the last day of class, Dec 10, by 5 pm.  You are also required to provide me with a copy of your data, sufficiently well labeled that I could replicate your results if I desired.  For most students, their final project grade will be determined by the quality of the written paper, however, I will adjust the final project grade down or up (up to 10%) for presentations that are substantially below or above reasonable course expectations.
Grades
Grades will be based on:
20% Midterm 1 (Mon, Sept 20)
20% Midterm 2 (Fri, Oct 22)
30% Final Research Project
30% Final Exam (Sat, Dec 11)

Final letter grades will be based on the cumulative performance I would expect from an intelligent and hardworking student.

Some Additional Notes/Policies
Material from a Missed Class: If you miss class, you are responsible for obtaining the material you missed. There is sufficient overlap with the course pack that reviewing the relevant material there will help, but you should arrange to obtain log file/programs/notes from a classmate (not from the professor), and work through these on your own to catch back up with the class. Students will frequently work on ungraded in-class exercises, and these will be posted on the course website for students who miss class to complete on their own.

Missed Exams: Make-up exams for the midterms will not be given. Midterm exam absences will only be excused for compelling circumstances (generally family emergencies or documented illness), in which case the other course material will be re-weighted. Students with a compelling and documented excuse for missing the final exam will take the final at an alternate time determined by the professor. Students anticipating conflict with an exam date due to religious observance or over-scheduling (3 or more exams on the same day) must bring these to my attention within the first 3 weeks of class.

Special Accommodations: Students with documented disabilities who may need academic accommodations should speak with me during first three weeks of the class. Also contact the Disability Services Office, Willard 322 (phone 303-492-8671), so that such accommodations may be arranged.

Class Disruptions: Ringing cell phones, texting during class time, and pets (as opposed to service animals) are not welcome in my class.

Class Start and End Times: I generally make sure that this class starts and ends on time. If you find that you are frequently late to class or find that I am frequently running over, first check to make sure your watch is set correctly: [http://www.timeanddate.com/worldclock/city.html?n=75](http://www.timeanddate.com/worldclock/city.html?n=75)

Academic Integrity: All students are responsible for knowing and adhering to the academic integrity policy of the University of Colorado at Boulder ([www.colorado.edu/policies/honor.html](http://www.colorado.edu/policies/honor.html) and [www.colorado.edu/academics/honorcode/](http://www.colorado.edu/academics/honorcode/)). All incidents of academic misconduct will be reported to the Honor Code Council. I particularly encourage students to avoid plagiarism (portrayal of another’s work or ideas as one’s own) and therefore to conscientiously identify and cite all ideas or language borrowed from any other work.
Course Schedule

Week 1 (Aug 23-27): Introduction and Getting Started in STATA

Week 2 (Aug 30-Sept 1): Summarizing Continuous Data

Week 3 (Sept 8-10): Categorical Data

Week 4 (Sept 13-17): Hypothesis Testing

Week 5: **Mon, Sept 20- 1st Midterm**
Sept 22-24: Relationship between 2 variables

Week 6 (Sept 27-Oct 1): Simple Regression

Week 7 (Oct 4-8): Multiple Regression

Week 8 (Oct 11-15): Omitted Variable Bias

Week 9 (Oct 18-22): Binary Variables and Interaction Models
**Fri, Oct 22: 2nd Midterm**

Week 10 (Oct 25-20): IPUMS Tutorial

Week 11 (Nov 1-5): Individual meetings during class time to discuss final projects

Weeks 12 and 13 (Nov 8-19): Advanced topics

Week 14 (Nov 22-26): Fall/Thanksgiving Break

Weeks 15 and 16 (Nov 29-Dec 10): Final Project Presentations

**Fri, Dec 10, 5 pm, Final Papers Due**
**Sat, Dec 11, 4:30-7, Final Exam**
