

Econ 6818: Econometric Methods and Applications

Second paper assignment

Turn in a second description of your econometrics project. Be as specific as possible, include

a description of the project

the question or questions you are addressing

the equation or equations you plan to estimate (make sure to define your variables)

functional form

stochastic specification, etc.

a description of your data (type, source, etc) and a copy of the data with summary statistics

a brief review of the literature on this issue

a description of the econometric issues/problems that are germane to your estimation.

briefly describe the chapters you are reading in Gujarati to prepare yourself.
