

Figure 1. Linkages between our Program Educational Objectives and the constituencies involved. The faculty considers inputs from the aerospace industry, external rankings, the PRP and the EAB in formulating Educational Objectives. The curriculum is designed to produce outcomes that support achievement of the objectives. The Alumni survey and inputs from industry measure the degree to which the objectives are achieved. Various programmatic and curricular factors that support achievement of the objectives are periodically formulated in a strategic plan and self-study, which are then reviewed by the PRP and EAB in light of our stated objectives. These inputs are also considered by the faculty as part of the periodic review process, leading to possible changes in objectives, outcomes and curriculum.
