

# YOU'RE INVITED

## to the Community-Based Research Showcase

Tuesday, May 17th

3:30 - 5:00, UMC 247

Light refreshments will be served.

Please join CU Engage to hear from our inaugural cohort of Community-Based Research (CBR) Graduate Fellows about their work. CBR Fellows include students from Mechanical Engineering, Education, Computer Science, and Geography.

The showcase will consist of 5 minute “lightning talks” by each set of presenters about:

- Healing Practices in Black Lives Matter
- Learning in the Food Movement
- Refugee Education
- Air Quality Monitoring
- Community Food Insecurity
- Social Dimensions of Dust-on-Snow

You will also have the opportunity to mingle with presenters and see posters representing their work.

In Community-Based Research, university researchers collaborate with people directly impacted by an issue to formulate a research project or creative project that examines an issue of public concern.

Guided by values of equity and participation, CBR teams draw on varied forms of expertise and collectively decide on goals and methods with the aim of producing public knowledge that builds capacity for the partner organization and/or contributes to social change.
