

EBIO 4100: ECOLOGY, EVOLUTION AND MANAGEMENT OF THE GULF OF CALIFORNIA

Vermilion Sea Field Station

Bahía de los Ángeles, Baja California, México

July 30 - August 16, 2009

This is an intensive, 18-day field course sponsored by The Vermilion Sea Institute. Beginning with oceanography, and moving on to evolution and ecology, we will equip students with intellectual tools that will enable them to perceive more closely and comprehend more deeply the rich marine environment around them. Students will also participate in research designed to inform management of a newly established Marine Protected Area.

Because VSI will cover half of each student's expenses for this course, application is required. For more information, and to apply, please visit:
