

UTILITY SERVICES

Main Campus

- Generate electricity for campus consumption
- Generate chilled water for Central Campus chilled water loop
- Generate steam for heating for entire Central Campus
- Master planning for generation and distribution of steam, electricity and chilled water
- Provide high voltage electrical distribution, operation and maintenance for both Central Campus, 132 KV and 4160 volt systems
- Provide engineering and master planning for high voltage distribution systems
- Provide project management, engineering design and code compliance for both utility generation and distribution on Central Campus
- Maintain and implement utility rate structures for both general fund and non-general fund customers on Central Campus including steam, chilled water and electricity
- Provide utility locate services for all utilities on Central Campus
- Provide air and storm water permitting for the Central Plant.

Williams Village

- Provide generation of cooling for Williams Village campus
- Provide generation of steam for Williams Village campus
- Provide master planning for steam and chilled water generation and distribution for Williams Village campus
- Provide project management, engineering design and code compliance for both generation and distribution of Williams Village for steam and chilled water
- Develop and implement utility rate structure for steam and chilled water to Williams Village campus customers
- Provide utility locates for all Williams Village campus utilities
- Provide high voltage electric operation and maintenance for Williams Village Heating Plant and distribution
- Provide air and storm water permitting for Williams Village Heating Plant
