SECTION 07270

FIRESTOPPING

PART 1 - GENERAL

1.1 SUMMARY:

A. Section Includes:

1. Through-penetration firestopping in fire-rated barriers including both empty openings and openings containing cables, pipes, ducts, conduits and other penetrating items.

2. Construction-gap firestopping at connections of the same or different materials in fire-rated construction using fire-resistant sealants.

3. Construction-gap firestopping occurring within fire-rated walls using fire-resistant sealants.

4. Construction-gap firestopping occurring at the top of fire-rated walls.

B. Related Sections:

1. Section 07210 - Building Insulation: Fibrous fire safing insulation.

2. Section 07253 - Sprayed Fireproofing.

5. Division 16 - Electrical: Raceway seals, cable trays and manufactured electrical devices.

1.2 SYSTEM PERFORMANCE REQUIREMENTS:

A. General:

1. Provide firestopping systems that are produced and installed to resist the spread of fire and the passage of smoke and other gases.

B. F-Rated Through-Penetration Firestop Systems:

1. Provide through-penetration firestop systems with F ratings required, as determined per ASTM E814, but not less than that equaling or exceeding
the fire-resistance rating of the constructions penetrated.

C. T-Rated Through-Penetration Firestop Systems:

1. Provide through-penetration firestop systems with T ratings, in addition to F ratings, as determined per ASTM E814, where systems protect penetrating items exposed to contact with adjacent materials in occupiable floor areas. T-rated assemblies are required where the following conditions exist:

   a. Where firestop systems protect penetrations located outside of wall cavities.

   b. Where firestop systems protect penetrations located outside fire-resistant shaft enclosures.

   c. Where firestop systems protect penetrations located in construction containing doors required to have a temperature-rise rating.

   d. Where firestop systems protect penetrating items larger than a 4-inch-diameter nominal pipe or 16 sq. in. in overall cross-sectional area.

D. Fire-Resistive Joint Sealants:

1. Provide joint sealants with fire-resistance ratings required, as determined per ASTM E119, but not less than that equaling or exceeding the fire-resistance rating of the construction in which the joint occurs.

2. **LEED EQc4: Low Emitting Materials**
   All sealants shall meet or exceed the VOC limits of South Coast Air Quality Management District Rule #1168 and all sealants used as fillers must meet or exceed the requirements of the Bay Area Quality Management District Regulation 8, Rule 51.

E. Exposed-to-View Firestopping Materials:

1. For firestopping exposed to view, traffic, moisture, UV radiation, and physical damage, provide products that do not deteriorate when exposed to these conditions.

   a. For piping penetrations for plumbing and wet-pipe sprinkler systems, provide moisture-resistant through-penetration firestop systems.

   b. For floor penetrations with annular spaces exceeding 4 inches or more in width and exposed to possible loading and traffic, provide
firestop systems capable of supporting the floor loads involved either by installing floor plates or by other means.

c. For penetrations involving insulated piping, provide through-penetration firestop systems not requiring removal of insulation.

2. For firestopping exposed to view, provide products with flame-spread values of less than 25 and smoke developed values of less than 450, as determined per ASTM E84.

1.3 SUBMITTALS:

A. Certifications:

1. Submit manufacturer's certification that materials supplied are in accordance with the specifications and requirements of the authorities having jurisdiction.

2. Submit certification that materials supplied are VOC compliant and are nontoxic to building occupants.

B. Test Reports:

1. Submit product test reports from, and based on tests performed by, a qualified testing and inspecting agency who is acceptable to ICBO and the University of Colorado at Boulder Department of Environmental Health and Safety evidencing compliance of firestopping with requirements based on comprehensive testing of current products.

C. Penetrations Schedule:

1. Submit a schedule showing typical penetrations of each penetrating material type, firestopping type to be used, F ratings, T ratings, UL or other acceptable testing agency reference numbers, and other pertinent data.

1.4 QUALITY ASSURANCE:

A. Fire-Test Response Characteristics:

1. Provide firestopping that complies with the following requirements and those specified under the "System Performance Requirements" article:

a. Perform firestopping tests by a qualified testing and inspecting agency. A qualified testing and inspecting agency is UL, Warnock Hersey, or another agency performing testing and follow-up inspection services for firestop systems that is acceptable to the
b. Through-penetration firestop systems must be identical to those tested per ASTM E814 under conditions where positive furnace pressure differential of a least 0.01" of water is maintained at a distance of 0.78" below the fill materials surrounding the penetrating items in the test assembly. Provide rated systems complying with the following requirements:

1) Furnish products bearing classification marking of qualified testing and inspecting agency.

2) Furnish firestop systems corresponding to those indicated by reference to system designations listed by UL in their "Fire Resistance Directory" or by Warnock Hersey.

c. Fire-resistive joint sealant systems must be identical to those tested for fire-response characteristics per ASTM E119 under conditions where the positive furnace pressure differential is at least 0.01 inch of water, as measured 0.78 inch from the face exposed to furnace fire. Provide systems complying with the following requirements:

1) Fire-Resistance Ratings of Joint Sealants: As indicated by reference to design designations listed by UL in their "Fire Resistance Directory."

2) Furnish joint sealants, including backing materials bearing classification marking of qualified testing and inspection agency.

B. Information on Drawings:

1. Drawings refer to specific design designations of through-penetration firestop systems intended to establish requirements for performance based on conditions that are expected to exist during installation. Any changes in conditions and designated systems require the Architect's prior approval. Submit documentation showing performance of proposed substitutions equals or exceeds that of systems they would replace and are acceptable to authorities having jurisdiction.
1. Conform to applicable standards, including, but not limited to:

b. ASTM E814 Test Method of Fire Tests of Through-Penetration Firestops.

D. Installer Qualifications:

1. Installer who has successfully completed within the last three years at least three firestopping applications similar in type and size to that of this project.

E. Single Source for Materials:

1. Obtain firestopping materials from a single manufacturer for each different product required.

F. Preconstruction Laboratory Tests:

1. Submit substrate materials representative of actual joint surfaces to be sealed to manufacturer of firestopping products for laboratory testing of firestop materials for adhesion to primed and unprimed substrate joints and for compatibility with secondary seals, if required, as indicated below:

   a. Use test methods standard with manufacturer to determine if priming and other specific substrate preparation techniques are required to obtain rapid, optimum adhesion of firestopping to substrate joints under environmental conditions that will exist during actual installation.

   b. Testing will not be required when firestopping manufacturer is able to submit preparation data required above which is based on previous testing of current firestopping products for adhesion to, and compatibility with, substrates matching those submitted.

G. Detectable Asbestos:

1. Provide firestopping products containing no detectable asbestos as determined by the method specified in 40 CFR Part 763, Subpart F, Appendix A, Section 1, "Polarized Light Microscopy."

1.5 WARRANTY:

A. Submit 2 copies of written 2-year warranty agreeing to repair or replace
firestopping which fails to perform as airtight and watertight joints; or fails in joint adhesion, cohesion, abrasion resistance, weather resistance, extrusion resistance, migration resistance, stain resistance, or general durability; or appears to deteriorate in any other manner not clearly specified by submitted manufacturer's data as an inherent quality of the material for the exposure indicated.

B. Provide warranty signed by the Installer and Contractor.

PART 2 - PRODUCTS

2.1 MANUFACTURERS:

A. Provide products by one of the following for each different product required:

1. 3M Fire Protection Products

2. Bio-Fireshield Inc.

3. General Electric Company

4. Tremco, Inc.

5. Hilti Inc.

6. Other approved manufacturer’s offering UL listings will be considered.

2.2 MATERIALS:

A. Compatibility:

1. Provide firestopping, joint fillers, dams and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by testing and field experience.

B. Accessories:

1. Provide components for each firestopping system that are needed to install fill materials and to comply with "System Performance Requirements" article in Part

   a. Use only components specified by the firestopping manufacturer and approved by the qualified testing and inspecting agency for designated fire-resistance-rated systems. Accessories include but are not limited to the following items:

   B.

   C.

   D.

   E.

   F.

   G.

   H.

   I.

   J.

   K.

   L.

   M.

   N.

   O.

   P.

   Q.

   R.

   S.

   T.

   U.

   V.

   W.

   X.

   Y.

   Z.
2. Permanent forming/damming/backing materials including the following:
   a. Semirefractory fiber (mineral wool) insulation.
   b. Ceramic fiber.
   c. Sealants used in combination with other forming/damming materials to prevent leakage of fill materials in liquid state.
      1) Fire-rated formboard.
      2) Joint fillers for joint sealants.
   e. Temporary forming materials.
   f. Substrate primers.
   g. Collars.
   h. Steel sleeves.

C. Applications:
   1. Provide firestopping systems composed of materials specified in this Section that comply with system performance and other requirements.

PART 3 - EXECUTION

3.1 PENETRATION SCHEDULE:

A. General:
   1. Prepare a schedule showing typical penetrations of each penetrating material type and other information as follows:
      a. Project Name.
      b. Construction Type.
      c. Occupancy.
d. Firestop Applicator.

B. Construction Assemblies:

1. Gypsum Board Walls
2. CMU and Concrete Walls
3. Concrete Floors
4. Floor/Ceiling Assemblies
5. Roof/Ceiling Assemblies
6. Shafts
7. Chases
8. Curtain Walls
9. Construction Joints
10. Expansion Joints

C. Fire Resistive Rating Requirements:

1. Furnish the following information for each type of construction assembly listed above:

   a. Hourly fire rating.
   b. "F" Rating.
   c. "T" Rating.
   d. Qualified testing agency Design No.
   e. Penetrating item.
   f. Penetrating material and size.
   g. Minimum annular space.
   h. Maximum annular space.
   i. Architect's detail and sheet number.
3.2. IDENTIFICATION

A. Identify through-penetration firestop systems with preprinted labels as recommended by manufacturer. Attach labels permanently to surfaces adjacent to and within 6 inches of edge of the firestop systems so that labels will be visible to anyone seeking to remove penetrating items or firestop systems. At a minimum, the labels shall include the following information:

1. Contractor’s name, address, and phone number
2. Through-penetration firestop system designation of applicable testing and inspecting agency
3. Date of installation
4. Through-penetration firestop system manufacturer’s name
5. Installer’s name

END OF SECTION 07270
