The University of Colorado Facilities Management Department together with the Office of Environmental Health and Safety is responsible for all matters relating to environmental health and safety. Each office must be consulted at each stage of the design process.

It is the responsibility of the Consultant to ensure that Facilities Management and Environmental Health and Safety are integral parts of the project, and that the latest editions of their guidelines and/or specifications are followed throughout the project.

The Facilities Management Construction/Life Safety Handbook (latest edition) is made a part of these Standards by reference and a copy can be obtained from the Office of Facilities Management Design and Construction.
