

GEOG 3682

Final Review Sheet

Be able to answer these questions about the theories/approaches we have discussed:

What is the theory?

How does the theory define the 'problem'?

How does the theory define and/or measure 'development'?

What major concepts/definitions are key to the theory?

When (generally) was the theory the mainstream discourse of development, or a prominent discourse of development?

What earlier theories does it build on, and/or 'react' to, and how?

How does the theory claim to lead to 'development' for *people*?

Be able to give 1-2 solid examples of that theory in practice.

What were some (if any) 'unintended consequences' of the theory as applied into practice?

Be able to give 1-3 major critiques of the theory and it's associated theoretical perspective
