Will be presenting a workshop on

How to Use the NCHS Data Warehouse on Trends in Health and Aging

Friday, March 17, 2006

2:00 – 4:00

CRS Computer Lab, IBS Bldg 4

The NCHS Data Warehouse on Trends in Health and Aging is a compilation of approximately 100 dynamic tables containing national and state level demographic and health data. The warehouse provides users with an easy way to obtain important macro-level data on trends in health and aging. In this “**hands-on**” **lab session**, you will learn how to use the warehouse software to: access data from a number of data systems including Vital Statistics, the National Health Interview Survey, National Health Care Survey, BRFSS, and the Medicare Current Beneficiary Survey, access important documentation, manipulate tables, and do on-line graphs, maps, calculations and statistical tests, and efficiently search and isolate the data and tables you need for your research, grant proposal, lectures, and manuscripts. Please sign up for this workshop by contacting Lori Hoppe at Lori.Hoppe@colorado.edu or 2-7986.
