

Student of the Month

Francisco is currently a PhD student working in Professor Jerry Qi's group. His research field includes experimental and theoretical work on thermo-mechanical response, such as mechanical relaxation, of Shape Memory Polymers. His work has been presented at the 2007 Society of Engineering Science Conference, and published in the Journal of the Mechanics and Physics of Solids.

Francisco's Bachelor Degree in Mechanical Engineering was obtained from the Pontific Catholic University in Lima, Peru. He then came to the US where he finished his Master Degree at CU-Denver. After working in his original school as a Laboratory Assistant, he came back to Colorado to start the PhD program.

During his free time, especially in summer, he enjoys playing soccer and biking.
