^a Response rate (number of respondents divided by sample size) is adjusted for non-deliverable mailing addresses, students for whom was not available, and other students who were sampled yet unavailable during the survey administration.

^b This report is based on information from all randomly selected students for both CU-Boulder and AAU peers. Targeted and locally administered oversamples (i.e., non-randomly selected students) are not included in this report.

^c Sampling error is an estimate of the margin by which the true score for your institution on a given item could differ from the reported score. To interpret the sampling error, assume that 60% of your students reply "very often" to a particular item. If the sampling error is +/-5%, then the true population value is most likely between 55% and 65.

^d Percent of total respondents within each category. These results are *not* weighted.

^e Institution-reported data. This information was used to weight the Mean Comparisons, Frequency Distributions, and Benchmark Comparisons reports.
