It's all in your head
A Clean Slate. A New Year.

Nothing like the clear resolve of a new year. With a fresh impulse to put your best energy to work for you. You could brush up on your language skills—in English, Arabic, German, French, Spanish, Japanese, Italian, American sign language, or Pascal. You could take one of several new computer graphics classes. You could enroll in our new certificate program in Total Quality Management. (After one semester, it's getting high marks.) You could learn to manage the burden of stress you carry around. Or reduce some of that stress with a popular course called Handling Difficult People. In these pages you'll find hundreds of course offerings designed to make you calmer, more effective and more fulfilled in 1994. Enjoy!

Come as you are. Bring what you know. Lively classroom discussion keeps concepts grounded and meaningful.

Evening classes attract motivated, interested learners. Expect lively discussion and instructors who love to teach. Credits may be applied to the degree of your choice. Each school or college admits a certain number of evening credit hours (usually 12) before you must apply for admission as a degree student. If you are thinking of applying to CU, you should consult a current catalog for admission requirements and make an appointment with a CU admissions advisor.

Eligibility: All you need is a high school diploma or GED. (Individuals on University of Colorado financial stops or academic suspension from the College of Engineering and Applied Science or the College of Business may not enroll.)

Residency: Whether you are a resident or non-resident, you may take up to 3 semester hours per term or session for $80 per credit hour. Residency makes a difference only if you are registering for 4 or more credit hours. If you have lived in Colorado for the past 12 months, you may be eligible for in-state tuition rates although you may be asked for documentation.

Under 21? If you're not 22 years old by the first day of classes, you are assumed to have the same legal residence as your parents. If your parents live out of state, you may petition the University of Colorado for resident status as an emancipated minor. If you believe your initial classification is incorrect, talk to the Classification Coordinator at 492-5148.

Tuition: Resident tuition is $80 per credit hour. Some courses requiring special equipment or materials may be slightly higher. If you're not a Colorado resident and want to register for 4 or more credit hours, you'll be charged non-resident tuition. Please see Survival Tip on page 4 for more information.

Privileges: As a Boulder Evening Credit student, you have access to the following services:

- Total library services at no additional charge
- Recreation Center Membership for $71.50 a semester
- Wardenburg Student Health Services for $50.20 a semester
- Photo IDs for $10 cash, checks with guarantee card, Visa, MasterCard (please bring photo identification). Boulder campus validation stickers are not available

To sign up for these and other student benefits, simply take your registration receipt to the appropriate office.

Counseling Services: Free academic counseling is available to help you plan a degree program, decide on a major, or simply explore your options. Feel free to call 492-5145 for an appointment.

Financial Aid: Degree students may qualify for all financial aid programs if eligible. Nondegree students taking courses for credit may qualify for a Stafford Loan (formerly GSL) if eligible. Applications are available in the Office of Financial Aid, Environmental Design Room 2 (492-5991). The Colorado Commission on Higher Education also provides some tuition assistance to eligible students and these applications are also available from the Office of Financial Aid.

Veteran Benefits: As an eligible veteran or veteran dependent, you may enroll in evening classes and apply credit toward a degree. If you have questions about your eligibility and benefits, contact Veterans Services in the Office of Financial Aid, Environmental Design, Room 2 or call 492-7322.

To Enroll: Advance registration is necessary, by mail, by FAX or in person at the Division of Continuing Education, 1221 University Avenue. See the instructions on the inside front cover of this catalog.

To Drop: To drop a credit course and ensure that you receive any tuition refund that may be due, come to the Division of Continuing Education, 1221 University Avenue and complete a drop voucher. If you don't officially withdraw from a course, you may receive a grade of "F" for that class.

Pass/Fail Option: This option is not available for Boulder Evening Credit Courses.

Special Faculty-Staff Registration: Faculty and staff of the University of Colorado at Boulder may enroll in Boulder Evening Credit Courses at half the regular tuition on a space available basis. Please bring a current copy of your PAF (showing at least half-time employment) to registration beginning January 18.

Dr. Michael Hall teaches Biopsychology in the Evening Credit program. The class appeals to professionals (nurses, hospital people, even psychotherapists) who want to know more about behavior as it is shaped by biological processes. Since the course fulfills a natural science requirement, some students take it hoping it will be easier than Chemistry or Physics. The bad news? "It's not. But it may be more interesting for some people." A member of the faculty at CU's Health Sciences Center since 1988, Dr. Hall also has a background in biofeedback and stress management and has done clinical work in those areas. At present, he is working on a book about dominance and submission in the animal world and parallels in human behavior; to help people handle difficult situations. When the boss growsl, should you growl back, or play dead?

Survival Tips

Tuition charges for credit courses offered by the Division of Continuing Education are determined by program and by the residency status of the student.

Residents of Colorado are assessed tuition based on the price per semester hour and the number of semester hours for which they register. Tuition is based on the cost cited in the most recent program publication.

Non-Residents of Colorado are assessed tuition based on the price per semester hour and the number of semester hours for which they register. Non-residents may register for up to three (3) semester hours at the resident tuition rate cited in the most recent program publication. Non-residents registering for four (4) or more semester hours of credit courses offered by the Division of Continuing Education, regardless of program, are assessed non-resident tuition for all courses at the rate established by the Board of Regents for that term or session.

Important Exception: Tuition for INDEPENDENT STUDY VIA CORRESPONDENCE is assessed at the rate cited in the catalog of The Colorado Consortium for Independent Study in effect at the time of registration. This assessment is not affected by considerations of residency.

The Board of Regents reserves the right to change tuition without prior notice.

All tuition and refund determinations are subject to audit.

Tune up your skills with instructors who put the “edge” in knowledge.

Software gets better and better and computers get faster and more powerful. But finding time to keep up is a challenge. Courses in Computer Applications make it easy. You can earn a certificate, or just learn some shortcuts. Let’s say, you can count on individual attention from outstanding instructors who will help you learn what you need to know as painlessly as possible—whether you’re a veteran or a cautious latecomer.

Certificate in Computer Applications
You may earn a Certificate in Computer Applications in roughly three or four semesters, but there is no time limit. As you complete appropriate courses, credit is automatically applied toward Certificate requirements. The requirements are straightforward.

A. Four required core courses:
1. Computer Literacy* (CCA 100)
2. Concepts of Data Processing and Information Technology (CCA 335)
3. Computer Application Systems Overview (CCA 340)
4. Software Development and Maintenance (CCA 350)

*Computer Literacy, the introductory course, is designed to be completed first, although you may take it at the same time as another course. If you have a substantial background with computers, you may omit it. Simply submit a letter to the Division of Continuing Education requesting an exemption from CCA 100 Computer Literacy, if you plan on achieving the Certificate.

B. At least one course in programming.
Programming languages offered include BASIC, Pascal, C and C++. Others are added to keep pace with industry standards.

C. Four elective courses chosen from the full range of computer topics. Any computer applications course not listed above and not a specific programming language qualifies as an elective, including all graphics courses.

This intensive, two-session lecture course covers the basics of systems start-up and a review of potential microcomputer-based applications. Topics include:
- Overview of CAD applications in engineering, design, drafting, and architecture
- Overview of AutoCAD third-party software
- Highlights of upcoming CAD Level I and II courses
- The impact and future of CAD
- Hardware and peripherals
- Managing CAD system issues

A technical background is not required, but some familiarity with microcomputers is helpful. This introductory course is highly recommended for those who have no CAD background, but have a desire to learn more about this rapidly expanding field.

Who Should Attend: Beginning CAD is especially helpful for those who wish to enroll in, or learn more about, upcoming courses in computer graphics or Computer Aided Design. Those who interface with CAD personnel, need basic information, and have no CAD background will benefit, too.

This course completes the treatment of C++ covering multiple inheritance and templates in detail, and introducing exceptions. We address the subtle question of which kind of problems really need multiple inheritance, and the language complexities of virtual base classes. Templates (generic types) are more straightforward, but also require skill for their effective use. Exceptions are introduced; they are not yet supported by production compilers. Prerequisite: CCA 328 Intermediate C++ Programming or equivalent.

Total Quality Management: An American Imperative.

Total Quality Management (TQM) has become much more than a slogan used in advertising campaigns. The rules of the marketplace have changed, and quality has become a key factor in determining a company’s success. The demand for qualified professionals competent in implementing and managing successful strategies of Total Quality Management continues to grow as does the impact of TQM on all aspects of American business.

To meet the challenge, the University of Colorado at Boulder, Division of Continuing Education is proud to address this timely subject. In cooperation with local business and industry, the Division is offering a Professional Certificate Program in Total Quality Management. This program will provide the knowledge and skills requisite to promote and implement TQM successfully in the workplace. Although anyone may take as many or as few courses as they wish, to earn the Professional Certificate in Total Quality Management, individuals must apply for admission to the certificate program, complete the seven core courses and two approved elective courses of their choice, and complete a team/individual project demonstrating total quality management skills and concepts. Participants with prior training/work experience may be allowed to substitute advanced elective courses for some of the required introductory core courses.

Our program is unique . . .
The Professional Certificate Program in Total Quality Management was developed at the request of business and industry. Representatives from a variety of firms were involved in its creation. Their input was employed in curriculum design, as well as in administrative processes. Course content and format will be practical and hands-on. Team participation within an organization will be encouraged through a reduced tuition plan for those employers enrolling three or more employees in the program. The culmination of the certificate program will be a team/individual project that will demonstrate the participants’ knowledge and skills in total quality management.

Required Courses

Introduction to Quality Management Fundamentals and Philosophy
Exploration of the philosophies from Taylor to Deming, Juran, Crosby, and Teguchi. This course will identify and explain the various quality philosophies, explore the application of quality management methodologies, and the implementation of total quality management concepts to improve productivity and a firm's competitive edge.

Managing the Transition to TQM
Understanding and promoting the tools of quality are requisite to implementing TQM but are insufficient as "stand alone steps" to that process. To implement TQM successfully, one must also understand and address organizational systems, culture, and power blocks. Focus of this course will be the principles of instilling vision in organizations, aligning organizational structure with the vision, training employees effectively, and managing organizational change.

Basic Tools for Improving Quality and Productivity
For most American companies, the cost of quality runs to approximately 25-40% of the costs of goods sold. This course will explore and define the cost of quality, measurement techniques, and how to use a cost of quality system to measure actual systems performance and productivity. Participants will be introduced to the seven basic tools of quality and techniques for their use.

Building High Performance Work Teams
This course will focus on techniques for building and maintaining high performance, continuous improvement work teams. Topics will include how to select the work team for the continuous improvement project, how to manage team formation and development, and how to use basic team building and facilitation skills. Participants will also be introduced to problem solving and decision making techniques using the Keppel-Tragoe models.

Introduction to Statistical Tools for Improving Productivity and Quality (SPC)
Using statistical methods to improve quality will be the focus of this course. The key to improved quality is measurement. Participants will develop an understanding of basic statistical concepts and will gain insight into SPC, what it can and cannot do for their organization, and how to apply it to impact on the bottom line performance. Discussion on the design of experiments will include why they are needed to optimize products and processes and how the results are applied.

Measuring and Achieving Customer Satisfaction
An introduction to the specific tools and techniques needed to build and measure a service culture and improve service levels within an organization. Focus will be given to recognizing quality service, diagnosing customer satisfaction, maximizing value to the customer, translating quality service to the organization, defining specific organizational standards for quality customer service, and acknowledging and achieving quality service in organizations.

Quality Function Deployment (QFD): A Structured Approach to Planning
Quality Function Deployment (QFD) guides managers through the planning process with a structure for identifying customer needs, allowing them to evaluate each proposed feature of the product or service function and how it affects the requirements of the customer. Course content will focus on the QFD business methodology and how it can improve quality and productivity.
