A new and more efficient HVAC system, including duct work, is being installed in the ballroom. While you may never see this “behind-the-scenes” system, we know it is a highly valued and welcomed update and are thrilled to include it in the renovation!

CU Boulder is known for its work in sustainability and energy improvements, and the UMC has been updating lights with this same mindset. The old lights in the ballroom will be replaced with energy-efficient, LED lights to provide a better product for the space and the environment.

Can you spot what’s missing? In addition to the wallpaper and acoustical paneling, the blue curtains also have been removed! If you are curious about the new look, check out the Prezi colorado.edu/umc/about/ballroom and artistic rendering of the renovated space.
