APPLICATION FORM

To be admitted to the Actuarial Studies Track of the Certificate Program in Actuarial Studies and Quantitative Finance, you must have completed 3 semesters of calculus, with a grade of $B+$ or better in each. If you have been given credit for AP exams in calculus, you must have scored 4 or better on the BC test, or have gotten a 5 on the AB test. If you have transfer credit in calculus, you must have gotten a $B+$ or better in each transferred course. If you are currently taking the third semester of calculus, you can be admitted provisionally to the Actuarial Studies Track with a note from your instructor stating that you are currently doing $B+$ or better work. Provisional admittance will make it easier to enroll for some courses, but you will dropped from the Actuarial Studies Track if you do not actually earn a $B+$ or better in the course. A student may also be admitted by passing the first examination of the Society of Actuaries.

You must meet with a Program advisor and fill out this application, bringing with you a student transcript (and documentation of AP scores) to verify that the calculus requirement has been met. It is imperative that you map out all your future required courses so that the feasibility of your completing the requirements is verified prior to acceptance in the Actuarial Studies Program.

Admission to the Actuarial Studies Track is limited to 10 per year and admittance will be done on a first-come-first-serve basis. Students must get a $C−$ or better in every required course in the Program and maintain a $B$ average in all required courses in the Program. Students may major in any department in any college (or even be not enrolled in any degree program).

In signing this form you agree to give the Program access to your academic records.
