October 2015

ANNOUNCING INTERNSHIPS FOR SPRING 2016

For undergraduate or graduate university students, spring semester 2016; very flexible on hours and scheduling; the internship can be formalized depending on the institution and department or be more informally structured.

The Center is an autonomous non-profit institution begun in 1974. Its activities include annual international energy conferences; a publications program with the biannual Journal of Energy and Development since 1975, an occasional paper series, and books; analysis, forecasting, and policy projects for such groups as the World Energy Council (London) and Toyota; and training and academic support through internships and fellowships. Those in economics/business form the largest group of interns in past years as well as from international affairs.

*April 24-27, 2016, the 43rd annual international energy conference will be held in Boulder. For interns, this will entail handling registration, session preparation, and participation during the actual sessions. These meetings are the oldest of their type held in the United States, with attendance by invitation only from the public and private sectors of as many as 23 countries. Many interns have found the conference to be the most valuable part of their experience with ICEED as they are able to interact with the participants and learn more about global energy issues, the geopolitics of energy, the U.S. shale revolution, and the economics of renewables.

*In the spring 2016 we shall be preparing two publications: at least one occasional paper for distribution at the conference and volume 41 of The Journal of Energy and Development. For the Journal, interns are asked to check citations as well as read for content and understanding as the largest number of subscribers are libraries world-wide that serve university-level students, faculty, and analysts.
