ASEN 5245 – Radar and Remote Sensing

Syllabus, Spring 2019

Class Lectures: Pre-recorded and available via class web page

Class Discussion: Thursdays, 5:00 – 6:30 pm, 17-January through 25-April, ECCS 1B12

Group Project Presentations: Last day of class, Thursday, 2-May, 5:00 – 7:50 pm, ECCS 1B12

Office Hours: Thursdays, 6:30 – 7:30 pm, ECCS 1B12
Mondays, 3:30 – 5:00 pm, ECNT 422
(and by appointment)

Web page: Canvas (https://canvas.colorado.edu)

Instructor: Christopher R. Williams
Phone: 303-492-4829 (it is better to contact me via email)
Email: christopher.williams@colorado.edu

Outline

The subject of radars is extremely broad and this course will introduce radar systems using three interconnected perspectives: theory, analysis, and synthesis. The theory portion will consist of pre-recorded lectures covering the mathematical basis and foundation of radar systems. This perspective is the dissemination and acquisition of fundamental radar knowledge needed for a professional to understand the operation of radar systems. The analysis portion will consist of processing and interpreting real radar observations from ground-based, airborne, and spaceborne platforms. This perspective applies acquired theoretical knowledge to solve real-life atmospheric science problems. Finally, the synthesis portion will consist of simulating key attributes of radar systems to solidify the understanding between radar theory and application.

Course Objective

This course will introduce radar systems from a combined theoretical and applied perspective. Students will develop a quantitative understanding of radar system design and radar signal analysis, and apply these principles to specific applications in environmental remote sensing.

The subject of radars is extremely broad, and a wide range of topics will be treated in this course. It is unlikely that any student will be prepared for all topics, but the particular expertise of individual students will be cultivated through a semester project on a particular radar application. The course is intended for any graduate student with a solid background in mathematics, familiarity with electromagnetic waves and wave propagation, and a background in undergraduate signal analysis.
The applications of radar are endless from the detection of targets such as aircraft to the estimation of parameters such as refractivity, wind speed, temperature, rainfall rate, raindrop size and the list goes on. The purpose of this class is to provide you with a fundamental understanding about how radar systems operate, their components, and their applications to environmental remote sensing.

By the end of the semester you will have a good understanding of how a radar system works and their application to environmental remote sensing. You will NOT be an expert in radar design, or construction, nor will you be able to go into Radio-Shack and buy the parts to construct your own backyard radar or a radar jammer so that you can avoid speeding tickets. Just a caveat here – It is illegal to transmit radio waves outside of a few specified bands (e.g., CB radio and the ISM bands) without a license from the FCC. So, if that is your intention, then you may want to consider another course. However, if you would like to learn how radar systems can be used to probe the environment and how physically useful information is extracted from such systems, then you are in the right place.

**Prerequisites**

The prerequisites for this class include a basic understanding of electromagnetic waves (Physics II), linear system theory including Fourier analysis and some basic understanding of statistics and/or probability. These are all topics that are typically covered in an undergraduate engineering curriculum. Some topics such as electromagnetic waves are covered in more detail by the electrical engineering curriculum however only a basic sophomore Physics II level understanding of the topic is expected for this course.

A working knowledge of MATLAB will be needed as functions written in MATLAB will be provided and homework assignments and projects may require code development in MATLAB. If you do not have a background in one these areas, you should expect to spend some extra time on the specific material.

There are many resources, including the library, at your disposal. If you have questions regarding your preparation for the class, you should contact the instructor. Additionally, because radar is an abroad topic, it is not unexpected that students may need to do some additional work in specific topical areas to provide a firm base in the fundamentals.
**Course Content**

The course is divided into several sections, which consist of the following topics:

**Radar Fundamentals**
- Radar basics; pulsed radar; target ranging; range ambiguity; pulse-to-pulse motion; signal, noise and loss; target detection; receiver components and processing; Doppler radar; Doppler velocity ambiguity

**Radar Sensitivity**
- Radar power equation: derivation and application for point targets; Radar power equation for area targets; Radar power equation for volume targets; radar power losses; radio and receiver noise

**Radar Antenna**
- Directivity; gain; illumination; antenna patterns; aperture antennas; phased array antennas

**Scattering Processes**
- Radar cross section; Rayleigh; Mie; geometric; Bragg; rough surfaces; polarization, propagation

**Radar Signals**
- Transmitter/signal generating characteristics; pulsed waveform; continuous waveform; pulse modulation and compression; complex signals including I and Q signals; digital filtering; Doppler spectrum

**Remote Sensing Applications including data analysis**
- Tracking radars; scanning weather radar; vertically pointing cloud and precipitation radar; airborne radars; space borne radars (e.g., TRMM, GPM, and CloudSat); synthetic aperture radar (SAR)

**Texts**

Required Text:

- **Title:** Principles of Modern Radar, Volume I - Basic Principles
- **Author(s) / Editor(s):** Richards, Mark A.; Scheer, James A.; Holm, William A.
- **Publisher:** SciTech Publishing
- **Copyright Date:** 2010 with updates in 2015
- **ISBN:** 978-1-891121-52-4
- **Electronic ISBN:** 978-1-61344-155-8
- **Online:** [www.Knovel.com](http://www.knovel.com)

Principles of Modern Radar (POMR) is available online through an agreement between the University of Colorado and [www.knovel.com](http://www.knovel.com). Once connected to the internet via a CU connection (either physically on the CU campus or via a CU VPN connection [see [http://www.colorado.edu/oit](http://www.colorado.edu/oit) for the latest on VPN services]) using your CU username and identikey password, browse to the secure website [www.knovel.com](http://www.knovel.com) and search for 'Principles of Modern Radar'.
It is difficult to find a textbook that covers the topic of radar from a remote sensing perspective. Additionally, many radar texts are written as reference books for practicing engineers and not specifically designed as a textbook for students. As reference books, they do not clearly develop subjects from first principles and do not provide problems that can worked by the student. Furthermore, many radar textbooks are written specifically for electrical engineers and assume a significant depth of understanding in electromagnetics and wave propagation, which are not required for this course.

Depending on your specific background, you may need to draw from other supplementary material to provide more clarity or depth to a topic. One complication of supplying supplemental material is that the notation may change. Since this is a graduate course, you should be able to figure out changes in notations used in different books. Many books on radar fundamentals are available through the Engineering Library and through www.knovel.com. Some good references include:

- Introduction to Airborne Radar, 2nd edition, by Stimson
- Radar Principles, by Peyton Z. Peebles, Jr.
- Radar System Principles, by Harold R. Raemer
- Radar Handbook, by Skolink
- Introduction to Radar Systems, by Skolink
- Tools of Radio Astronomy, by Rohlfs and Wilson
- Modern Radar System Analysis, by Marton
- Radio Techniques for Probing the Terrestrial Ionosphere, by Hunsucker
- Fundamentals of Applied Electromagnetics, by Fawwaz T. Ulaby
- Elements of Engineering Electromagnetics, 6th edition, by Rao

There are many other textbooks in the library, however, they are usually checked out. If you are interested in finding one of the other books, you should put a recall request into the library. Be prepared as it can take a couple weeks for the books to be recalled. Several radar books are available online through an agreement between the University of Colorado and www.knovel.com.

**Class Format**

The class format will consist of both pre-recorded lectures and in-person lectures/discussions. The pre-recorded lectures will cover technical aspects of radar systems. The students are expected to watch the approximately 1-hour of technical lectures before attending class on Thursday evening. Benefits of pre-recorded technical lectures include watching them multiple times, and on your own schedule, before we discuss the material in-person. The in-person lectures/discussions will focus on salient features covered in the pre-recorded technical lectures in addition to answering questions and working through example problems. On Thursday evening, we will meet in-person (or on-line) for 1.5 hours.
Video Recording of Thursday Evening Class
In addition to pre-recorded lectures, the Thursday evening classes will be recorded and posted on the class web page. Please be aware that all conversations during the Thursday evening class may be recorded both on video and/or audio by the distant learning studio equipment.

Virtual Access to Thursday Evening Class
On-line virtual access to the Thursday evening class is available to remote students via Zoom, a live video conferencing service administered through the University of Colorado. The Zoom meeting ID for ASEN 5245 is: **258-034-573**. Here is how to connect to the Zoom meeting:

- Zoom Meeting ID: **258-034-573**
- Join via web browser: https://cuboulder.zoom.us/j/258034573
- Join via Zoom app (using meeting ID)
- Join via iPhone one-tap: US: +16699006833,,258034573#
  or +16465588656,,258034573#
- Join via telephone: US: +1-669-900-6833 or +1-646-558-8656

Additionally, if you need help with getting Zoom up and running, please visit the following link:

- http://www.colorado.edu/oit/services/conferencing-services/web-conferencing-zoom

Extreme Weather
Safety is the highest priority. If extreme weather is forecasted for Boulder on Thursday evening, we may conduct our Thursday evening class via the Zoom conferencing tool.

Class Web Page – Canvas
All class communications, including outgoing assignments, incoming submissions, pre-recorded lectures, recorded Thursday evening classes, and class announcements and discussions, will be conducted through the class web page posted on the University of Colorado Canvas service. Access to this web page will be made available to you via your registration confirmation. Also, all email communication will be using @colorado.edu addresses.
Course Grading

20%  Homework, quizzes, reading assignments, and class engagement/participation
20%  Mid-term Exam #1* – covering weeks 1-5.
20%  Mid-term Exam #2* – covering weeks 1-10 (everything before Spring Break).
40%  Final Group Project – Groups of 3-4 people, analyze a radar system and a data set
  25%  Presentation (group grade), given on last day of class: 2 May, 5:00-7:50 pm
  50%  Written report (group grade), uploaded by last day of class (2 May) at 5 pm
  25%  Written peer review of other presentations (individual grade), uploaded by end of
       final exam period Saturday, 4 May, at 10 pm

100%  Total

*Exams will be open book, take-home, but time limited. You will have several days to start the
exam, but once you start, you will have either 4 or 24 hours to complete. A 4-hour exam equates
to an “in class” exam, and a 24-hour exam will require some programming and data analysis.

Aerospace Engineering Sciences & University Policies 2019

Accommodation for Disabilities
If you qualify for accommodations because of a disability, please submit your accommodation
letter from Disability Services to your faculty member in a timely manner so that your needs can
be addressed. Disability Services determines accommodations based on documented
disabilities in the academic environment. Information on requesting accommodations is located
on the Disability Services website (www.colorado.edu/disabilityservices/students). Contact
Disability Services at 303-492-8671 or dsinfo@colorado.edu for further assistance. If you have
a temporary medical condition or injury, see Temporary Medical Conditions (http://www.
colorado.edu/disabilityservices/students/temporary-medical-conditions) under the Students tab
on the Disability Services website and discuss your needs with your instructor.

This course requires the use of the Zoom conferencing tool which is currently not accessible to
users using assistive technology. If you use assistive technology to access the course material,
please contact your faculty member immediately to discuss.

Religious Holidays
Campus policy regarding religious observances requires that faculty make every effort to deal
reasonably and fairly with all students who, because of religious obligations, have conflicts with
scheduled exams, assignments or required attendance. In this class, you must let the instructor
know of any such conflicts within the first two weeks of the semester so that I can work with you
to make reasonable arrangements. See campus policy regarding religious observances
(http://www.colorado.edu/policies/observance-religious-holidays-and-absences-classes-andor-
exams) for full details.
Classroom and On-Campus Behavior

Students and faculty each have responsibility for maintaining an appropriate learning environment, not only while in class, but also while working outside of class such as in labs and study areas. Those who fail to adhere to such behavioral standards may be subject to discipline. Professional courtesy and sensitivity are especially important with respect to individuals and topics dealing with race, color, national origin, sex, pregnancy, age, disability, creed, religion, sexual orientation, gender identity, gender expression, veteran status, political affiliation or political philosophy. Class rosters are provided to the instructor with the student's legal name. I will gladly honor your request to address you by an alternate name or gender pronoun. Please advise me of this preference early in the semester so that I may make appropriate changes to my records. For more information, see the policies on classroom behavior (http://www.colorado.edu/policies/student-classroom-and-course-related-behavior) and the Student Code of Conduct (http://www.colorado.edu/osccr/).

Sexual Misconduct, Discrimination, Harassment and/or Related Retaliation

The University of Colorado Boulder (CU Boulder) is committed to fostering a positive and welcoming learning, working, and living environment. CU Boulder will not tolerate acts of sexual misconduct (including sexual assault, exploitation, harassment, dating or domestic violence, and stalking), discrimination, and harassment by members of our community. Individuals who believe they have been subject to misconduct or retaliatory actions for reporting a concern should contact the Office of Institutional Equity and Compliance (OIEC) at 303-492-2127 or cureport@colorado.edu. Information about the OIEC, university policies, anonymous reporting (https://cuboulder.qualtrics.com/jfe/form/SV_0PnqVK4kkJ1JZnf), and the campus resources can be found on the OIEC website (http://www.colorado.edu/institutionalequity/).

Please know that faculty and instructors have a responsibility to inform OIEC when made aware of incidents of sexual misconduct, discrimination, harassment and/or related retaliation, to ensure that individuals impacted receive information about options for reporting and support resources.

Honor Code

All students enrolled in a University of Colorado Boulder course are responsible for knowing and adhering to the Honor Code. Violations of the policy may include: plagiarism, cheating, fabrication, lying, bribery, threat, unauthorized access to academic materials, clicker fraud, submitting the same or similar work in more than one course without permission from all course instructors involved, and aiding academic dishonesty. All incidents of academic misconduct will be reported to the Honor Code (honor@colorado.edu; 303-492-5550). Students who are found responsible for violating the academic integrity policy will be subject to nonacademic sanctions from the Honor Code as well as academic sanctions from the faculty member. Additional information regarding the Honor Code academic integrity policy can be found at the Honor Code Office website (https://www.colorado.edu/osccr/honor-code).

Other Policies

Please be respectful of others during class time. This includes turning off your cell phone before class and not talking during class unless you have the floor. Details about all of the university policies can be found on the web at http://www.colorado.edu/policies/index.htm.
