Nathan Kangchen Zhao Email: Nathan.Zhao@colorado.edu

Textbook

Overview
The study of dynamics is a key component of every undergraduate engineering major, and is especially relevant to Aerospace Engineering. In the upper division you will begin taking courses dealing with the dynamics of air and space vehicles building upon the fundamentals presented in this class. Structures, fluids, controls, and orbital mechanics all have roots in this material, so it is critical that you build this technical base carefully.

In this class the fundamentals of two-dimensional motion of particles and rigid bodies are presented from both a theoretical and practical point of view. In addition to deriving and using first principles of dynamics, we will do experiments, designs, and hands-on work that are intended to help students develop an intuition or feel for dynamics. Furthermore, we take the study of simple motions one step further by introducing the fundamental concepts of vibrations and control into this course. Vibration analysis is critical to aerospace vehicle design, and as engineers we must both understand the motion of vehicles and learn how to modify the vehicle to suit mission requirements. This course will give you a flavor of these advanced topics, laying the groundwork for more advanced studies in your junior and senior years.

Course Outline

1. Particle Kinematics and Kinetics
2. Particle Energy and Momentum Methods
3. Planar Rigid Body Kinematics and Kinetics
4. Rigid Body Energy and Momentum Methods
5. Vibrations
6. Systems and Control

Prerequisites
Physics 1, ASEN2001, and ASEN2012, APPRM2350 are prerequisites for this course. APPM2360 is a pre or co-
requisite. Much of the material covered in this class has been introduced in your freshman physics class. It also
depends heavily on a solid understanding of statics. Students are expected to have a working knowledge of vector
operations and vector calculus. Assignments regularly require the use of MATLAB; students are expected to be
proficient in the use of MATLAB for problem solving.

Course Components

Material and concepts are introduced, and student mastery is evaluated using several mechanisms throughout
the course:

Reading Assignments - The primary means for conveying factual information, techniques, and examples is
reading assignments in the textbook and course notes. The textbook is excellent, providing clear explanations
and numerous examples of varying difficulty - take advantage of this outstanding resource. Reading
assignments are to be completed prior to the class lecture period.

Lecture & Discussion – We typically start a new topic in each lecture session. The instructor will provide a
complementary overview of the material covered in the reading assignment.

Homework – Homework problems are generally assigned once per week. They provide practice in solving
problems of varying difficulty and sometimes will also involve computing. Collaboration on homework is
allowed (copying from others or solution manuals is not); however, students are encouraged to use homework
as a means to ensure their individual mastery of the subject. In-class group problem solving and labs will allow
for considerable collaborative problem solving. The due date of homework is generally on Mondays by 11 pm.

Group Problem Solving – In the lecture and lab periods we will sometimes have group problem solving
sessions. A handout is provided with conceptual questions about the material and/or relevant problems (often
from previous year’s exams). Students work in groups to answer conceptual questions about the material and
do practice problems in preparation for the unit exam. We discuss the questions and problem solutions in class.

Labs - There are a variety of experimental and design labs in this course that offer a different perspective on
the material. They vary in duration and requirements. Each lab handout will state the objectives of the
assignment, the report requirements, and the weighting (number of points) in the overall lab grade. In some
cases, students will observe dynamic phenomena in the lab before we formally discuss the theory and do practice
problems. Why do it in this order? The idea behind this type of “discovery learning” is that it helps you develop
a concrete mental picture to connect to abstract mathematical concepts; and, it allows the student to formulate
the questions that need to be answered to fully understand the experiment. In particular, we have tried to avoid
making the labs “canned” or “turn-key”; that is, you should not expect to be able to walk into the lab, collect
some data, and crank out a fill-in-the-blank answer to the lab questions.

The labs are designed so that you should expect to have to try out several different approaches or ideas, puzzle
over and discuss surprising results, debug and adjust models, and ultimately demonstrate a clear understanding
of the material. We encourage you to work with your team to figure things out, ask questions of the instructors
and TA’s when you are stuck, make some calculations, and maybe redo the experiment based on what you
observed. The final result of the lab is not a “right” answer, but rather a set of answers and a solid explanation,
based on correct mathematical theory and good experimental practice, of why such results were obtained.
In some laboratory exercises, we will stress data analysis skills. This includes extensive usage of computer programming and statistics taught in ASEN2012. In these examples, we expect students to follow directions from the instructor and provide a lab write-up that demonstrates that students understood the key concepts of the lab. Presentation of results will be stressed and students are expected to properly describe what was measured, what was modeled, and whether discrepancies between observations and models are significant. Although the computer programs written for this class will not be graded, students are required to turn them in. Students will also be required to follow programming instructions made by the instructor. Our purpose in making these programming requirements is to teach students new and efficient methods for conducting engineering analyses. Proper presentation of laboratory results is important throughout the ASEN curriculum.

**Exams** – Four *in-class exams* will be conducted at ~3 week intervals. Exams will include both conceptual questions and more detailed problems similar to homework or lab analysis. The *final exam* will contain material from the entire course.

**Final Exam**
The final exam schedule is shown above. If you have 3 or more finals scheduled for the same day, university policy allows you to request a rescheduling of the exams in excess of 2. Please check your schedule and notify the instructor within the first 2 weeks of the semester if you will require a rescheduled exam for this class.

**Logistics**
1. Assignment submission: All assignments are to be submitted in Gradescope (be sure to include team members for group assignments) with Canvas as a backup if you run into difficulties uploading to Gradescope. Graded assignments and rubrics will be available also through Gradescope.
2. Grading errors: If you notice an error in grading of your assignment, you may use the regrade request function in Gradescope to briefly describe the error. Regrade requests for any exam or assignment must be submitted to the professors within 2 weeks of the grade posting to Canvas.
3. Office Hours: Instructor and TA office hours will be arranged and announced as soon as possible.
4. Email: We reserve the right to reply to email questions only in business hours, i.e. Monday through Friday, 8:00 am – 5:00 pm. Emails received 24 hours or less before the exams are not guaranteed a response. To better help us manage and track your emails please include ASEN2003 at the beginning of the subject line.
5. Attendance: Attendance to lecture on zoom or in-person is expected, but not required. Participation in laboratory sessions (either in-person or remote) is mandatory. In-class assignments may be given at any time and students are expected to come to class prepared to work with their team.
6. In-class exams and comprehensive final exam: Exam dates are provided on the class schedule. If you cannot take an exam due to an unavoidable schedule conflict, notify the instructor at least one week prior to the exam date to make arrangements for an alternate test date. If you cannot take an exam due to illness or other emergency situation occurring on the exam date, notify the instructor as soon as possible so that an appropriate course of action can be arranged.

Instructions on what materials may be used for exams will be provided by the instructors. Any type of collaboration or copying on an exam or final constitutes cheating and will result in an F for the course. An honor code violation report will be filed.
7. Lab Reports - Experimental and design lab exercises are conducted and submitted together with your team. Contributions of each team member will be identified for each exercise. Collaborations with other teams, including shared diagrams or extensive discussion of results must be acknowledged. A grading rubric is provided with each lab.

8. Deadlines - Late assignments are not accepted except under extenuating circumstances such as a school closure or sudden illness. If such an event occurs, you are expected to contact the instructor immediately by phone or email. A hectic schedule or crashed computer is not an acceptable reason for a late lab submission. If you know in advance that you will not be on campus for a due date, you may submit your assignment to any time prior to the due date.

9. Grading - Grades on individual assignments and for the overall course are set based on the following criteria. 

**Grades do not correspond to pre-specified ranges of scores.**

A, A- Demonstrates superior understanding of the material beyond the course requirements, excellent technical work

B+, B Demonstrates comprehensive understanding of the material, very strong technical work

B-, C+ Demonstrates good understanding of the material, complete technical work

C Demonstrates adequate understanding of the material to proceed to the next level; sufficient technical work

C- Does not demonstrate adequate understanding of the material to proceed to the next level

D Poor technical work

F Unsatisfactory performance

**To receive a course grade of C or better, a student must earn a C or better on the individual grade in this class.** A C is the minimum grade that allows you to proceed to a course for which this is a prerequisite. If the weighted exam and final score is below a C, the student’s individual score will be assigned as their final grade in the course. In this case the group assignments will not contribute to the final grade. See the grading table below for specific weightings.

10. Safety is the number one priority for laboratory activities. If you have not already done so, you are required to attend an orientation and safety lecture presented both by ITLL and by course staff during the first week of the semester. Anyone violating rules of safe conduct may receive a zero for the laboratory exercise and may be restricted from ITLL. Use of ITLL facilities is a privilege, not a right. Those endangering themselves, others, or laboratory equipment by their unsafe conduct will not maintain their access privileges.
Homework Logistics

Posting & Submission
- Homework will be posted on Canvas/Gradescope including the due date & time.
- Homework is due in Gradescope on Mondays by 11:00 pm (Mountain Time). Late homework will not be accepted, but the lowest two homework grades will be dropped (see below).
- Solutions will be posted on Canvas after the due date.

Collaboration vs Copying/Plagiarism
- Collaboration is permitted on homework. You may discuss the means and methods for formulating and solving problems and even compare answers, but you are not free to copy someone's assignment. Copying material from any resource (including solutions manuals) and submitting it as one’s own is considered plagiarism and is an Honor Code violation. Remember, the more you think about the problems yourself, the more you actually learn, and the more successful you will be on exams and in subsequent courses.
- Directly COPYING from a solution manual or other source is considered PLAGIARISM.
- While we strongly discourage students from relying on a solutions manual for pedagogical reasons, we will NOT consider the USE of a solutions manual as plagiarism. What is critical is that students SOLVE the homework on their own, regardless of the tutoring or resources they used, and not turn in a copy of someone else’s work. Thus, copying another student’s homework or the answer key and turning it in is plagiarism and a violation of the honor code.

Content
- Homework solutions must demonstrate an understanding of the principles involved, by including diagrams, using correct notation and terminology, explaining the approach, showing the key steps to obtaining the solution, and outlining the answer with proper units. These problem-solving steps are critical for developing problem formulation skills.

Format
- Homework should be neatly handwritten with a new page for each problem. Typed homework is acceptable if you prefer it, but is definitely not required or encouraged. If you write a MATLAB script or function to solve the problems, the code must be included in your submission.
- Always submit work with a professional appearance. neatness, clarity, and completeness count. Very messy work will be not be graded and a score of zero recorded.
- Vector notation must be used when appropriate. Numerical values must include units and a meaningful number of significant digits. Final answers must be indicated with an arrow, underline, or box.

Grading
- For grading purposes, homework is considered part of the group grade and only contributes to the total grade when the individual work is C or better.
- Homework is graded partially based on completion of all assigned problems (50%) and partially based on the quality/accuracy of a subset of the assigned problems (50%). To receive credit for completion, problems must be presented using the full appropriate problem solving approach. The problems graded for accuracy will be evaluated in more detail looking for correct methods, accurate complete results, and clear explanations (where appropriate).
- In computing the overall homework grade, we will drop the two lowest homework scores. This is meant to provide some flexibility in dealing with a higher workload in another class or unexpected situation that prevents you from completing one or two of the assignments on time.

*The threshold individual grade for a C will not be higher than 70.

Grading Philosophy

Assignments are graded to an absolute standard designed to indicate your level of competency in the course material. Minor adjustments may be made in the assignment of final grades, but there is a limited amount of “curving” in the course. The final grade indicates your readiness to continue to the next level in the curriculum. The AES faculty have set these standards based on our education, experience, interactions with industry, government laboratories, others in academe, and according to the criteria established by the ABET accreditation board.

The course grade is primarily dependent on individual measures of competency, i.e. exams. The other course assignments are designed to enrich the learning experience, build additional skills, and enhance individual performance, not to substitute for sub-standard individual competency. Accordingly, group assignment grades are only incorporated into the final grade when the individual grade is a C or better. In other words, if your individual average is below a C, the group-based grade fraction will not be averaged into your final grade, which will then be based solely on your individual score. This policy makes it important to use the group assignments to enhance your own learning. If the work in the assignment is split up among group members, be sure that the learning is not also split up, but is shared among the whole group. Homework is included in the group grade because collaboration is encouraged; it does not mean that copying is permitted on homework.
Aerospace Engineering Sciences & University Policies 2020
(statements can be found online as well)

Spring Pause
The week of March 22-26 will be used in this class as a spring pause to provide us all with a safe and supportive way to promote health, wellness and learning without leaving campus. During this week, we won’t have any exams or assignments due. We will still have class with interactive class activities that will require your attendance and be part of your final course grade. While March 25 is a wellness day, attendance is still required for all other class sessions that week. We all wish we could take a regular spring break, but public health concerns prevent us from doing so. So, we want to emphasize that it is still important for everyone to behave responsibly. Do not use the week to travel or engage in risky behavior that could result in an outbreak on campus after we all return.

Classroom Behavior
Both students and faculty are responsible for maintaining an appropriate learning environment in all instructional settings, whether in person, remote or online. Those who fail to adhere to such behavioral standards may be subject to discipline. Professional courtesy and sensitivity are especially important with respect to individuals and topics dealing with race, color, national origin, sex, pregnancy, age, disability, creed, religion, sexual orientation, gender identity, gender expression, veteran status, political affiliation or political philosophy. For more information, see the policies on classroom behavior and the Student Code of Conduct.

Requirements for COVID-19
As a matter of public health and safety due to the pandemic, all members of the CU Boulder community and all visitors to campus must follow university, department and building requirements, and public health orders in place to reduce the risk of spreading infectious disease. Required safety measures at CU Boulder relevant to the classroom setting include:
- maintain 6-foot distancing when possible,
- wear a face covering in public indoor spaces and outdoors while on campus consistent with state and county health orders,
- clean local work area,
- practice hand hygiene,
- follow public health orders, and
- if sick and you live off campus, do not come onto campus (unless instructed by a CU Healthcare professional), or if you live on-campus, please alert CU Boulder Medical Services.

Students who fail to adhere to these requirements will be asked to leave class, and students who do not leave class when asked or who refuse to comply with these requirements will be referred to Student Conduct and Conflict Resolution. For more information, see the policies on COVID-19 Health and Safety and classroom behavior and the Student Code of Conduct. If you require accommodation because a disability prevents you from fulfilling these safety measures, please see the “Accommodation for Disabilities” statement on this syllabus.
All students who are new to campus must complete the COVID-19 Student Health and Expectations Course. Before coming to campus each day, all students are required to complete the Buff Pass.

Students who have tested positive for COVID-19, have symptoms of COVID-19, or have had close contact with someone who has tested positive for or had symptoms of COVID-19 must stay home. In this class, if you are sick or quarantined and unable to participate in specific lecture or lab activities, please notify the instructors and if possible, your lab partners, of your absence. In accordance with FERPA privacy laws, you are not required to state the nature of your illness/reason for being absent.

**Accommodation for Disabilities**

If you qualify for accommodations because of a disability, please submit your accommodation letter from Disability Services to your faculty member in a timely manner so that your needs can be addressed. Disability Services determines accommodations based on documented disabilities in the academic environment. Information on requesting accommodations is located on the Disability Services website. Contact Disability Services at 303-492-8671 or dsinfo@colorado.edu for further assistance. If you have a temporary medical condition, see Temporary Medical Conditions on the Disability Services website.

**Preferred Student Names and Pronouns**

CU Boulder recognizes that students' legal information doesn't always align with how they identify. Students may update their preferred names and pronouns via the student portal; those preferred names and pronouns are listed on instructors' class rosters. In the absence of such updates, the name that appears on the class roster is the student's legal name.

**Honor Code**

All students enrolled in a University of Colorado Boulder course are responsible for knowing and adhering to the Honor Code. Violations of the policy may include: plagiarism, cheating, fabrication, lying, bribery, threat, unauthorized access to academic materials, clicker fraud, submitting the same or similar work in more than one course without permission from all course instructors involved, and aiding academic dishonesty. All incidents of academic misconduct will be reported to the Honor Code (honor@colorado.edu; 303-492-5550). Students found responsible for violating the academic integrity policy will be subject to nonacademic sanctions from the Honor Code as well as academic sanctions from the faculty member. Additional information regarding the Honor Code academic integrity policy can be found at the Honor Code Office website.

**Sexual Misconduct, Discrimination, Harassment and/or Related Retaliation**

The University of Colorado Boulder (CU Boulder) is committed to fostering an inclusive and welcoming learning, working, and living environment. CU Boulder will not tolerate acts of sexual misconduct (harassment, exploitation, and assault), intimate partner violence (dating or domestic violence), stalking, or protected-class discrimination or harassment by members of our community. Individuals who believe they have been subject to misconduct or retaliatory actions for reporting a concern should contact the Office of Institutional Equity and Compliance (OIEC) at 303-492-2127 or cureport@colorado.edu. Information about the OIEC, university policies, anonymous reporting, and the campus resources can be found on the OIEC website.
Please know that faculty and graduate instructors have a responsibility to inform OIEC when made aware of incidents of sexual misconduct, dating and domestic violence, stalking, discrimination, harassment and/or related retaliation, to ensure that individuals impacted receive information about options for reporting and support resources.

**Religious Holidays**

Campus policy regarding religious observances requires that faculty make every effort to deal reasonably and fairly with all students who, because of religious obligations, have conflicts with scheduled exams, assignments or required attendance. For each class, check with your faculty member in advance so that you are aware of their specific requirements for accommodating religious observances.

See the [campus policy regarding religious observances](#) for full details.
