

ASEN 3200 ORBITAL MECHANICS/ATTITUDE DYNAMICS & CONTROL

Lectures: MWF 10:40-11:30 am, AERO 120 (Zoom 1/10-1/21/22)

Labs: Fridays - Section 011 8:30-10:20 am, Section 012 1:00-2:50 pm PILOT Lab (Zoom 1/10-1/21/22)

Office hours: See Canvas page

Instructors:

Dr. Penina Axelrad: penina.axelrad@colorado.edu

Office: AERO 417

Dr. Jay McMahon: jay.mcmahon@colorado.edu

Office: AERO 461

Lab Coordinator Bobby Hodgkinson: hodgkinr@colorado.edu

Office: AERO 150D

Teaching Assistants / Teaching Fellows:

Patrick Miga: Patrick.Miga@colorado.edu

Angel Hoffman: Angel.Hoffman@colorado.edu

Donavan Harshfield: Donavan.Harshfield@colorado.edu

Tomaz Remec: Tomaz.Remec@colorado.edu

Textbooks:

Required:

Howard D. Curtis, *Orbital Mechanics for Engineering Students*, 4th Edition, Elsevier Aerospace Engineering Series 2021. Electronic edition available for free through CU Libraries.

Supplementary (not required)

- Bedford and W. Fowler, *Engineering Mechanics: Dynamics*, 5th Edition Pearson Prentice Hall, Upper Saddle River, NJ, 2008. See Chapter 20 and Appendix C.
- H. Schaub and J. L. Junkins, *Analytical Mechanics of Space Systems*, 4th Ed, AIAA Ed Series, Reston, VA, 2014.
- Larson and Wertz, *Space Mission Analysis and Design*. Provides useful hardware information
- Vallado, D. A., *Fundamentals of Astrodynamics and Applications*, 4th Ed Microcosm, Hawthorne, CA 2013.

Prerequisites: ASEN 2003, ASEN 2004, APPM 2360 and ASEN 2350 or MATH 2400

Course Web Page: <http://canvas.colorado.edu>

Overview and Goals:

In the sophomore ASEN2003 and ASEN2004 courses, students developed an understanding of the motion of particles and rigid bodies in 2D as well as the basics of orbital mechanics and satellite design. In ASEN3200 we break free of the planar motion bounds to explore full 3D motion of space platforms. By the end of the semester students will be able to model and analyze the orbital and attitude motion of satellites; to develop a near-Earth satellite mission concept; and to design a single axis spacecraft attitude control system.

The first half of the course focuses on dynamics and control of spacecraft orientation or attitude. Nearly all spacecraft must be accurately pointed to accomplish their mission, yet the natural behavior in orbit is typically uncontrolled tumbling. We will develop a fundamental understanding of these natural 3D rigid body kinematics and dynamics, using this to discuss common methods of passive and active attitude control. Attitude sensor and actuator technology will be investigated, as well as common ways of representing and determining attitude. On the topic of rigid body kinematics, the goal is for students to become comfortable with a small sub-set of attitude representations such as the DCM, 3-2-1 and 3-1-3 Euler angles, and get some experience working with quaternions. On the topic of rigid body dynamics, the goal is for students to understand the use of Euler's equations and the angular momentum vector to describe the motion of a rigid body. On the topic of control, the goal is for students to gain experience working with simple open-loop and closed-loop flow diagrams can be created, and how to use transfer function methods to develop single-input-single- output linear controls. This is applied to 1-D constrained rotational motion only.

Lab experiments will be conducted to measure spacecraft mass properties, understand the operation of gyroscopic instruments, and design feedback control to achieve precise spacecraft pointing. In these labs the goal is for students to receive hands-on opportunities to see the complex dynamic interactions that can occur with spinning rigid bodies and gyroscopic systems.

In the second half of the course, students will learn the characteristics of the motion of a system of particles with emphasis on the two-body problem, a model that offers a good preliminary approximation for the dynamics governing the motion of a planetary orbiter or interplanetary transfer vehicle. We will study the motion of a spacecraft under the influence of gravitational perturbing forces and n-body perturbations from additional celestial bodies. Also, the perturbations caused by atmospheric drag, and solar radiation pressure will be considered. In addition to studying the motion, we will look at ways to determine the ephemeris or trajectory of a satellite from observations. Finally, we will study aspects of designing an Earth orbiting and/or interplanetary mission.

The orbital section includes a design lab project in which students simulate an orbital dynamics scenario and develop a design concept to achieve a specified objective.

Class Format:

The first half of the course is devoted to attitude dynamics and is led by Dr. Axelrad. The second half will focus on orbit mechanics, led by Dr. McMahon. Each section has a similar format:

- Lectures are held Monday, Wednesday, and Friday. Attendance is required. Lab sections are also held on Fridays. Attendance is required.
- For the first two weeks of the semester, all class sessions will be held remotely via Zoom during the scheduled times. After that, we expect in-person participation. Lectures will be recorded via classroom capture or zoom, and posted to Canvas, so that students who are not able to attend a class due to illness or other unavoidable situation, can access the material they missed. If the professor is not able to attend in person, the class may be delivered via recording or on Zoom.
- Reading and homework assignments are given weekly.

Exams and Finals:

- There are total of 4 exams in this course.
- Halfway through each of the two sections a midterm exam will be held during the class period. Exams will be closed book with students allowed to bring a 1-page sheet of notes.
- At the end of each of the two sections a final exam is scheduled outside of the regular class time. These finals will be closed book with students allowed to bring two pages of notes. Students will have 2.5 hours to take each of the final exams. Dates and times are shown on the schedule.
- The instructors will provide information for timing of exams to students with accommodations.
- If you cannot take an exam due to an unavoidable schedule conflict, notify the instructor at least one week prior to the exam date to make arrangements for an alternate test date. If you cannot take an exam due to illness or other emergency situation occurring on the exam date, notify the instructor as soon as possible so that an appropriate course of action can be arranged.
- Exams are to be done completely independently. Any type of collaboration or copying on an exam or final constitutes cheating and will result in an F for the course. An Honor Code violation report will also be filed.

Homework:

- For grading purposes, homework is considered part of the group grade and only contributes to the total grade when the individual work meets the minimum threshold described under grading policies.
- Collaboration is permitted on homework. You may discuss the means and methods for formulating and solving problems and even compare answers, but you are not free to copy someone's assignment. Copying material from any resource (including solutions manuals) and submitting it as one's own is considered plagiarism and is an Honor Code violation. Honor code violations on homework will result in a grade penalty and a violation report being filed with the honor code office.
- Homework solutions must demonstrate an understanding of the principles involved by including diagrams, using correct notation and terminology, explaining the approach, showing the key steps to obtaining the solution, and outlining the answer with proper units. These problem-solving steps are critical for developing problem formulation skills.
- Always submit work with a professional appearance. Neatness, clarity, and completeness count and will be accounted for in the grading scheme. Although you may use software to aid in computations, code may not be submitted solely as your solution.

- Although each homework assignment will have several problems, all problems may not be graded. Solutions will be provided for all the problems.
- If you believe that your homework was graded incorrectly, you have 2 weeks from when it returned to request a regrade in Gradescope. Request should simply include a brief description of the error. These will be reviewed by the instructors.
- Assignment due dates will be indicated on the class schedule and the Canvas/Gradescope pages. Students are responsible to ensure that submitted documents are uploaded correctly, readable, and in the correct location. Corrupt files will not be graded.
- Late homework will not be accepted; however, we will drop each student's lowest two homework scores in computing final grades. We expect this allowance should be sufficient to cover accidentally missed deadlines, illness, or other personal reasons for missing a deadline.

Lab Projects

- Experimental exercises, design labs, and projects are conducted together with your team.
- A grading rubric will be provided with each lab project.
- Team lab reports will be submitted, graded, and returned in Gradescope.

Class Attendance:

You are expected to participate in class, labs, and scheduled exams. If you need to miss a lecture, it is your responsibility to catch up on the material. If you need to miss a lab, it is your responsibility to notify both the instructor and your lab partners.

Grading:

Grades on individual assignments and for the overall course are set based on the following criteria.

- A, A- Demonstrates superior understanding of the material, excellent technical work
- B+, B Demonstrates comprehensive understanding of the material, very strong technical work
- B-, C+ Demonstrates good understanding of the material, complete technical work
- C Demonstrates sufficient understanding of the material to proceed to the next level; adequate technical work
- C- Does not demonstrate sufficient understanding of the material to proceed to the next level
- D Poor technical work
- F Unsatisfactory performance

- If you believe that an error has been made in grading any of your submissions, you may submit a regrade request in Gradescope.
- Please note: the CANVAS gradebook is a guide to ensure that your assignments have been graded and that the grade entered is consistent with that reported to you. The CANVAS gradebook does not contain all information related to the final course grade calculation; so if you would like an estimate of your final course grade, consult with the instructor by email or in office hours.

Grading Policy

Assignments are graded to an absolute standard designed to indicate your level of competency in the course material. Minor adjustments may be made in the assignment of final grades, but there is a limited amount of “curving” in the course. The final grade indicates your readiness to continue to the next level in the curriculum.

The course grade is primarily dependent on individual demonstrated measures of competency. We rely on exam scores to identify whether a student has achieved the basic level of competency of the material. Accordingly, other assignment grades are only incorporated into a student’s final grade when their individual grade is a C or better. In other words, if your exam average is below a C, the other assignment grades are not included in the final grade, as shown in the table below.

Other course assignments are designed to enrich the learning experience and to enhance individual performance, not to substitute for shortcomings in individual competency. This policy makes it important to use the homework and lab group assignments to enhance your own learning. If the work in the assignment is split up among group members, be sure that the learning is not also split up, but rather is shared among the whole group.

Final Grade Table

Type	Description	Percentage
Exams	Midterm Exams (2)	40%
	Final Exams (2)	60%
	Exam Total	100%
Other	Lab Projects	70%
	Homework	30%
	Other Total	100%
Final Grade	If exam grade \geq C	Final grade = $0.5 \cdot \text{Exam Total} + 0.5 \cdot \text{Other Total}$
	If exam grade $<$ C	Final grade = Exam Total

University Policies

CLASSROOM BEHAVIOR

Both students and faculty are responsible for maintaining an appropriate learning environment in all instructional settings, whether in person, remote or online. Those who fail to adhere to such behavioral standards may be subject to discipline. Professional courtesy and sensitivity are especially important with respect to individuals and topics dealing with race, color, national origin, sex, pregnancy, age, disability, creed, religion, sexual orientation, gender identity, gender expression, veteran status, political affiliation or political philosophy. For more information, see the policies on [classroom behavior](#) and the [Student Conduct & Conflict Resolution policies](#).

REQUIREMENTS FOR COVID-19

As a matter of public health and safety, all members of the CU Boulder community and all visitors to campus must follow university, department and building requirements and all public health orders in place to reduce the risk of spreading infectious disease. Students who fail to adhere to these requirements will be asked to leave class, and students who do not leave class when asked or who refuse to comply with these requirements will be referred to [Student Conduct and Conflict Resolution](#). For more information, see the policy on [classroom behavior](#) and the [Student Code of Conduct](#). If you require accommodation because a disability prevents you from fulfilling these safety measures, please follow the steps in the “Accommodation for Disabilities” statement on this syllabus.

CU Boulder currently requires masks in classrooms and laboratories regardless of vaccination status. This requirement is a precaution to supplement CU Boulder’s COVID-19 vaccine requirement. Exemptions include individuals who cannot medically tolerate a face covering, as well as those who are hearing-impaired or otherwise disabled or who are communicating with someone who is hearing-impaired or otherwise disabled and where the ability to see the mouth is essential to communication. If you qualify for a mask-related accommodation, please follow the steps in the “Accommodation for Disabilities” statement on this syllabus. In addition, vaccinated instructional faculty who are engaged in an indoor instructional activity and are separated by at least 6 feet from the nearest person are exempt from wearing masks if they so choose.

If you feel ill and think you might have COVID-19, if you have tested positive for COVID-19, or if you are unvaccinated or partially vaccinated and have been in close contact with someone who has COVID-19, you should stay home and follow the further guidance of the [Public Health Office](#) (contacttracing@colorado.edu). If you are fully vaccinated and have been in close contact with someone who has COVID-19, you do not need to stay home; rather, you should self-monitor for symptoms and follow the further guidance of the [Public Health Office](#) (contacttracing@colorado.edu).

If you need to miss class due to illness, please notify the instructor and your lab partners of the dates you will be out. There is no need to provide any specifics as to the nature of your illness.

ACCOMMODATION FOR DISABILITIES

If you qualify for accommodations because of a disability, please submit your accommodation letter from Disability Services to your faculty member in a timely manner so that your needs can be addressed. Disability Services determines accommodations based on documented disabilities in the academic environment. Information on requesting accommodations is located on the [Disability Services website](#). Contact Disability Services at 303-492-8671 or dsinfo@colorado.edu for further assistance. If you have a temporary medical condition, see [Temporary Medical Conditions](#) on the Disability Services website.

PREFERRED STUDENT NAMES AND PRONOUNS

CU Boulder recognizes that students' legal information doesn't always align with how they identify. Students may update their preferred names and pronouns via the student portal; those preferred names and pronouns are listed on instructors' class rosters. In the absence of such updates, the name that appears on the class roster is the student's legal name.

HONOR CODE

All students enrolled in a University of Colorado Boulder course are responsible for knowing and adhering to the Honor Code academic integrity policy. Violations of the Honor Code may include, but are not limited to: plagiarism, cheating, fabrication, lying, bribery, threat, unauthorized access to academic materials, clicker fraud, submitting the same or similar work in more than one course without permission from all course instructors involved, and aiding academic dishonesty. All incidents of academic misconduct will be reported to the Honor Code (honor@colorado.edu; 303-492-5550). Students found responsible for violating the academic integrity policy will be subject to nonacademic sanctions from the Honor Code as well as academic sanctions from the faculty member. Additional information regarding the Honor Code academic integrity policy can be found on the [Honor Code website](#).

SEXUAL MISCONDUCT, DISCRIMINATION, HARASSMENT AND/OR RELATED RETALIATION

CU Boulder is committed to fostering an inclusive and welcoming learning, working, and living environment. The university will not tolerate acts of sexual misconduct (harassment, exploitation, and assault), intimate partner violence (dating or domestic violence), stalking, or protected-class discrimination or harassment by or against members of our community. Individuals who believe they have been subject to misconduct or retaliatory actions for reporting a concern should contact the Office of Institutional Equity and Compliance (OIEC) at 303-492-2127 or email cureport@colorado.edu. Information about university policies, [reporting options](#), and the support resources can be found on the [OIEC website](#).

Please know that faculty and graduate instructors have a responsibility to inform OIEC when they are made aware of incidents of sexual misconduct, dating and domestic violence, stalking, discrimination, harassment and/or related retaliation, to ensure that individuals impacted receive information about their rights, support resources, and reporting options. To learn more about reporting and support options for a variety of concerns, visit [Don't Ignore It](#).

Religious Holidays

Campus policy regarding religious observances requires that faculty make every effort to deal reasonably and fairly with all students who, because of religious obligations, have conflicts with scheduled exams, assignments or required attendance. For this class, you are expected to review the course schedule and let the instructor know within the first two weeks of the semester of any such conflicts so that we can work out an accommodation plan.

See the [campus policy regarding religious observances](#) for full details.
