ASEN 3112 - Fall 2019

Structures

Instructors: Francisco Lopez Jimenez

Office: AERO 355 Phone: (303) 492-1047

Email: Francisco.LopezJimenez@Colorado.EDU

Office Hours*: Monday, 4:30-5:30 PM (during weeks of instruction)

Location: AERO 203 (Seebass Conference Room)

Kurt Maute

Office: AERO 353 Phone: (303) 735-2103 Email: maute@colorado.edu

Office Hours*: Monday, 4:30-5:30 PM (during weeks of instruction)

Location: AERO 203 (Seebass Conference Room)

Laboratory Coordinator: Bobby Hodgkinson

Office: AERO 150D Phone: 303-492-7238

e-mail: hodgkinr@colorado.edu

Teaching Assistants: Sophie Zaccarine

Office Hours: Thursday, 9:00 -10:00 AM, AERO 303 (Onizuka)

Thursday, 1:00 -2:00 PM, AERO N353 (Chawla)

e-mail: sophia.zaccarine@colorado.edu

Armin Kianfar

Office Hours: Thursday, 5:00 - 6:00 PM, AERO 303 (Onizuka)

Friday, 4:00 -5:00 PM, AERO 203 (Seebass)

e-mail: armin.kianfar@colorado.edu

Teaching Fellow: Deven Mhadgut

Office Hours: Tuesday, 8:00 - 9:00 AM, AERO 303 (Onizuka)

Wednesday, 3:30 - 4:30 PM, AERO N353 (Chawla)

e-mail: deven.mhadgut@colorado.edu

Lab Assistant: Will Butler, email: William.W.Butler@colorado.edu

^{*} to discuss personal matters, students may request a one-to-one meeting with one of the instructors

Lectures: M/W: 09:00 – 10:15 pm, AERO 120

Recitations & Labs: Section 011 T: 12:30 – 2:20 am, AERO N 100 (co-PILOT)**

Section 012 T: 2:30 – 4:20 pm, AERO N 100 (co-PILOT)**

Class Web Site: CANVAS, https://canvas.colorado.edu/, ASEN3112

Class e-mail list: Through CANVAS only

Texts: Lecture notes are posted on CANVAS

Prerequisites: ASEN 2001-2003-2004 and APPM 2360, with grade of C or better in each.

Course Objectives: The main objective of the course is to introduce modern structural analysis

techniques based on understanding of the development of internal forces, stresses and deformations. These are essential to the design and verification of advanced aerospace structures and systems. The course offers an introduction to matrix and finite element methods for skeletal (truss and frame) structures, as well as to fundamental concepts in mechanical vibrations, structural dynamics, and

structural stability.

Major Course Topics and Schedule:

Week	Topic
1	The concept of stress and strain
2	Elastic behavior of materials
3	Torsion I & II
4	Torsion III, Deformation of Beams I
5	Deformation of Beams II
6	Energy Methods I & II
7	Energy Methods III & IV
8	Finite Element Method I & II
9	Finite Element Method III
10	Finite Element Method IV, Structural Dynamics and Vibration I
11	Structural Dynamics and Vibration II & III
12	Structural Dynamics and Vibration IV & V
13	Stability of Structures I
14	Fall Break
15	Stability of Structures II & III
16	Design Problems I & II

^{**} if location for particular labs differs from the one stated above, the alternate location will be announced on CANVAS.

Course Work:

Coursework consists of reading assignments, in-class clicker quizzes, homework, recitations, experimental/ computer labs, three midterm exams and one final exam. Attendance to recitation is expected; attendance to labs is mandatory. Exams cover all material including lectures, recitations, laboratory work and homework.

Recitations: Recitations are offered on Tuesdays in AERO N100, in two sections of 1 hr. 50 min each. The main objective is to review material covered during the week, especially that helpful for the currently assigned homework. Recitations may also include additional exercise material, not covered in class, useful for midterm exam preparation. Recitations are replaced by lab demos (conducted at the same time, also in AERO N100, unless another location is announced) prior to laboratory and/or computer group work.

<u>Reading Assignments</u>: Reading assignments are to be completed before the lecture/discussion. The lecture/discussions should help to clarify and supplement what students have read.

<u>Homework:</u> Homework assignments are given most weeks on Wednesday and are due at the start of the following class on Wednesday, as specified in the assignment. No homework assignments are due in the week of midterm exams. Assignments generally cover 3 to 5 problems and are designed to help students become proficient in a subject. Before doing any homework, students should read the posted lectures and try to follow worked-out examples. This should give the student an idea of the principles involved and the solution method. Homework problems may be also discussed in the recitation prior to the due date. All homework should be done on Engineering paper (the green-on-white ruled paper available at the bookstore). No electronic versions (e.g. PDF or WORD) are accepted. No late homework submissions are accepted.

Written work should be neat and readable with adequate space and margins. Messy work will be returned ungraded and a zero-score recorded. The main and essential steps of the solution approach need to be shown; failing to do so will result in a lower score. The final result needs to be indicated by an arrow, underline or box. Multiple answers when one is required will be counted as incorrect. Copying material from any resource (including solutions manuals) and submitting it as one's own are considered plagiarism and are an Honor Code violation.

<u>Labs</u>: Safety is the first priority for lab work involving experiments or use of computers. If students have not done so, they are required to attend an orientation and safety course presented by the co-PILOT staff in the first week of the semester. Anyone violating rules of safe conduct may be restricted from accessing the co-PILOT facilities. The four experimental labs are carried out in groups of about seven students. The groups are created randomly among student of the same lab section. Attendance is mandatory; missing part of a lab (demo, experiment) without cause or notification results in 50% of the student's report score being deducted. A student should contact one of the instructors in advance if the student cannot make attend part of a lab to make appropriate arrangements (see also section on Course Policies and Procedures).

<u>Computer Use</u>: Several assignments and labs may require computer access and basic programming skills in languages such as MATLAB and Excel. As part of the introduction to finite element methods the use

of the commercial FEM package ANSYS is taught for the computer component of Lab 2. Students will have access to the PILOT and co-PILOT computers to do computer work, once they have completed the PILOT orientation.

Grading Guidelines:

Group work: *	4 Lab reports	25% (= 5% + 10% + 5% + 5%)
Individual:	Clicker Quizzes Homework 3 Midterm Exams Final Exam	10% 15% 30% (= 3 times 10%) 20%
		100%

^{*}Group work only counts toward final grade if the total individual grade is C or better. If the individual grade is below C, the final grade equals the total individual grade.

If the score of any of the 3 midterm exams is lower than the score of the final exam, the midterm grade is dropped, and the weighting of the final is increased by 10% for each dropped midterm.

Notes:

- Clicker quizzes gauge the student's level of preparation of a lecture and the conceptual understanding of course material. The scores of the two lowest clicker quizzes are dropped. The quiz questions are discussed after the quiz during the lecture. No makeup quizzes are offered.
- Each homework assignment includes a set of several problems. The assignment is partially graded for completeness (20pts), while one randomly selected problem is graded in detail for technical content and presentation (30pts). Thus, the final score for each homework set is out of a total of 50pts and computed based upon the numeric breakdown below:

$$HW\frac{Score}{50} = 30pts (Rand.Problem) + 20pts \times \frac{\# of Remaining Problems Completed}{\# of Remaining Problems in Set}$$

Solutions for all homework problems are posted on CANVAS after the due date. The homework assignments with the two lowest scores are dropped. Homework needs be turned at the beginning of class. Late homework will not be accepted; this includes returning homework after lecture has started.

- Midterms cover material discussed in the weeks prior to the exam. They provide a gauge to
 determine what an individual student has learned. The midterm exams are given at regular
 lecture hours in AERO 120. All midterm exams are closed-book, but a crib sheet is permitted.
 The maximum number of pages of the crib sheet will be announced separately for each midterm.
 No makeup exams will be offered.
- The final exam spans the entire course but with additional emphasis on material covered since the third midterm.

• All your scores and grades will be posted on CANVAS and need to be checked within **2 weeks** after they are posted; requests to change a score need to be made within this period. These requests must be made in email to **both** instructors. The subject line of the email should read:

ASEN 3112 - Request for score change for <exam/lab/homework> <Id>

- We reserve the right to make minor changes to this distribution of weights based on variations in assignments.
- Homework and midterms are returned during recitations and office hours. Students can check the assignment for grading correctness during these times and request a change of score if incorrect grading is found. Once a graded assignment is taken outside the recitation class room (co-PILOT) or the room used for office hours, no change of score can be requested.

Letter Grading Scheme:

Letter grades will be assigned as follows:

Letter	Grade Percent Grade	4.00 Scale
A	93.00 - 100.00	4.00
A-	90.00 – 92.99	3.67
B+	87.00 – 89.99	3.33
В	83.00 – 86.99	3.00
B-	80.00 – 82.99	2.67
C+	77.00 – 79.99	2.33
С	73.00 – 76.99	2.00
C-	70.00 - 72.99	1.67
D+	67.00 – 69.00	1.33
D	63.00 – 66.99	1.00
F	Below 63.00	0.00

Exam Times and Locations:

- Midterm 1: Wednesday September 25th, in class
- Midterm 2: Wednesday October 23rd, in class
- Midterm 3: Wednesday November 20th, in class
- Final exam*: Wednesday December 18, 1:30 PM 04:00 PM, AERO 120

^{*} date is not confirmed yet by CU campus and may change.

Course Policies and Procedures:

- 1. The instructors reserve the right to reply to email questions only in business hours, i.e. Monday through Friday, 8:00 am 5:00 pm. Emails received 24 hours or less before the exams or any due dates are not guaranteed to be responded to.
- 2. The instructors reserve the right to make changes to the weekly course schedule based on occurring events that require different dispositions. The instructors will give sufficient advanced notice through announcements in class and posting on CANVAS. Changes to this syllabus and assignments may be announced at any time during class periods. The instructors will post the current syllabus and assignments on CANVAS. Both are dated in the footnote.
- 3. This course exclusively uses CANVAS to send out announcements, to provide comments to students daily on class activities, and to provide general information about course assignments. It is strongly recommended that all students setup their CANVAS account such that they receive automatically a notification about new announcements and updates to the CANVAS course page.
- **4.** No makeup clicker quizzes, makeup homework, and makeup exams will be offered. A zero-score is recorded for each missed clicker quiz, homework, and exam. Note that the two clicker quizzes and homework assignments with the lowest scores are dropped. If the score of a midterm is lower than the one of the final, the midterm is automatically dropped and the weighting on the final is increased by 10%.
- 5. If you qualify for accommodations because of a disability, please submit your accommodation letter from Disability Services to your faculty member in a timely manner so that your needs can be addressed. Disability Services determines accommodations based on documented disabilities in the academic environment. Information on requesting accommodations is located on the <u>Disability Services website</u>. Contact Disability Services at 303-492-8671 or <u>dsinfo@colorado.edu</u> for further assistance. If you have a temporary medical condition or injury, see <u>Temporary Medical Conditions</u> under the Students tab on the Disability Services website.
- 6. Students and faculty each have responsibility for maintaining an appropriate learning environment. Those who fail to adhere to such behavioral standards may be subject to discipline. Professional courtesy and sensitivity are especially important with respect to individuals and topics dealing with race, color, national origin, sex, pregnancy, age, disability, creed, religion, sexual orientation, gender identity, gender expression, veteran status, political affiliation or political philosophy. Class rosters are provided to the instructor with the student's legal name. The instructors will gladly honor your request to address you by an alternate name or gender pronoun. Please advise the instructors of this preference early in the semester so that the instructors may make appropriate changes to the student's records. For more information, see the policies on classroom behavior and the Student Code of Conduct.
- 7. All students enrolled in a University of Colorado Boulder course are responsible for knowing and adhering to the Honor Code. Violations of the policy may include: plagiarism, cheating, fabrication, lying, bribery, threat, unauthorized access to academic materials, clicker fraud, submitting the same or similar work in more than one course without permission from all course instructors involved, and aiding academic dishonesty. All incidents of academic misconduct will be reported to the Honor Code (honor@colorado.edu); 303-492-5550). Students who are found responsible for violating the academic integrity policy will be subject to nonacademic sanctions from the Honor Code as well as academic sanctions from the faculty member. Additional information regarding the Honor Code

academic integrity policy can be found at the **Honor Code Office website**.

- 8. The University of Colorado Boulder (CU Boulder) is committed to fostering a positive and welcoming learning, working, and living environment. CU Boulder will not tolerate acts of sexual misconduct, intimate partner abuse (including dating or domestic violence), stalking, protected-class discrimination or harassment by members of our community. Individuals who believe they have been subject to misconduct or retaliatory actions for reporting a concern should contact the Office of Institutional Equity and Compliance (OIEC) at 303-492-2127 or cureport@colorado.edu. Information about the OIEC, university policies, anonymous reporting, and the campus resources can be found on the OIEC website. Please know that faculty and instructors have a responsibility to inform OIEC when made aware of incidents of sexual misconduct, discrimination, harassment and/or related retaliation, to ensure that individuals impacted receive information about options for reporting and support resources.
- 9. Campus policy regarding religious observances requires that faculty make every effort to deal reasonably and fairly with all students who, because of religious obligations, have conflicts with scheduled exams, assignments or required attendance. In this class, students must let the instructors know of any such conflicts within the first two weeks of the semester so that reasonable arrangements can be worked out. See <u>campus policy regarding religious observances</u> for full details.

Final Comments

The grading scheme in this course is not assigned to reward or punish. It is designed to indicate the student's level of competency compared to the standards set by the AES faculty. Does the student meet the minimum level of competency? Does the student exceed the minimum? Is the student below the minimum? This should be indicated by the final grade. The instructors are professionals and it is their job to set and maintain standards. The instructors are expected to use their education, experience, and interactions with industry, government laboratories, others in academe, etc., to determine the content of these standards. Because the CU Aerospace Engineering program is accredited by ABET (Accreditation Board for Engineering and Technology), the AES curriculum meets that board's requirements. As with any other professionals (doctors, lawyers, etc.) the students must trust that the instructors know what they are doing and that they are obliged to uphold standards.

The final grade indicates the student's readiness to continue to the next level of courses. Meeting the minimum requirements indicates that the student is prepared to continue at least at the minimum level required for the next in the sequence of courses. Exceeding the minimum means the student is ready to enter the next course and that the student has mastery of material beyond the minimum, i.e., the student shows some level of proficiency.
