Instructions:

1. Calculators are permitted.
2. Notes, your text and other books, cell phones, and other electronic devices are not permitted—except for calculators or as needed to view and upload your work.
3. Justify your answers, show all work.
4. When you have completed the exam, go to the uploading area in the room and scan your exam and upload it to Gradescope.
5. Don't forget to scan any pages you used for extra space!
6. Verify that everything has been uploaded correctly and the pages have been associated to the correct problems.
7. Turn in your hardcopy exam.

On my honor as a University of Colorado Boulder student, I have neither given nor received unauthorized assistance on this work.

Signature: _____ Date: _____

Duration: 90 minutes

Problem 1. (26 points.) Suppose Y is a random variable with pdf

$$f_Y(y) = \begin{cases} 3(1-y)^2 & 0 < y < 1 \\ 0 & \text{otherwise} \end{cases}$$

- (a) Find the expectation of Y .
- (b) Find the variance of Y .
- (c) Find the pdf of the random variable J when $J = 2Y - 1$.

(Use the back if additional space is needed!)

Problem 2. (21 points.) A book containing 150 pages has 100 misprints. Assume that the number of misprints in 150 pages follows a Poisson distribution. Recall that the Poisson distribution has the pmf:

$$P(X = i) = e^{-\lambda} \frac{\lambda^i}{i!} \quad \text{for } \lambda > 0$$

- (a) Find the probability that a particular page contains no misprints.
- (b) Find the probability that a particular page contains at least 2 misprints.
- (c) Find the expected number of errors in any collection of 10 pages.

(Use the back if additional space is needed!)

Problem 3. (24 points.)

- (a) A certain variety of pine tree has a mean trunk diameter of $\mu = 150$ cm and a variance of $\sigma^2 = 900$ cm. The diameter of the pine tree trunk in this area follows a normal distribution.
- (i) What is the probability that a pine tree that is randomly selected from the area has a diameter between 100 and 180 centimeters?
 - (ii) If three pine trees are randomly selected, and each has a diameter measurement that is independent of the others, what is the distribution of the sum of their trunk diameters (the three trunk diameters added together)?
- (b) (This problem is unrelated to any previous problem.) Let X be a random variable such that $P(X = 1) = 1 - P(X = 0) > 0$. If $3\text{Var}(X) = 2E[X]$, find $P(X = 0)$.

(Use the back if additional space is needed!)

Problem 4. (29 points.) Let X and Y be random variables with joint probability density function:

$$f_{X,Y}(x,y) = \begin{cases} 12xy(1-x) & 0 < x < 1, 0 < y < 1 \\ 0 & \text{otherwise} \end{cases}$$

- (a) Are X and Y independent? Justify your answer.
- (b) Find the marginal probability density function of X .
- (c) Find $E[X]$.
- (d) Write the specific expression for the probability that $3Y > X$, complete with any integration symbols and bounds that are needed, but **do not solve**.

Standard Normal Table

$\Phi(z) = P(Z \leq z)$ for $Z \sim N(0, 1)$
