Technical Electives

Pre-Med Biomechanics requires a total of 12 Technical Elective credits all of which must be Engineering Technical Electives and of which at least 9 must be upper-division and 3 must be on a focus tech elective. Visit the program's [Advising & Curriculum](#) webpage for options.

Humanities & Social Science Electives/Writing Requirements

Visit [Humanities, Social Sciences, and Writing Requirements](#) for options.

Writing Requirement Options

- ENES 1010 (freshmen only), ENES 3100
- WRTG 3030, WRTG 3035
- PHYS 3050
- ENLP 3100 (previous success in an ENLP course highly recommended)

Grade Requirements

The minimum passing grade for a prerequisite or co-requisite course within the biomedical engineering curriculum is a C-. This requirement includes courses completed in another program or department (APPM, PHYS, etc.).

The minimum passing grade for standalone classes is a D-. In addition, students need to have a cumulative and major GPA of at least 2.000 in order to graduate from the College of Engineering. **Pass/Fail** is only permitted for BMEN 1000 and Free Elective credits.

Focus Elective

One technical elective must be taken from the Focus Elective list on the Biomedical Engineering website. Please consult the Advising & Curriculum website for a current list of options.

Effective: Fall 2024

Pre-med Tracks: Biomechanics vs. Bioinstrumentation

Biomechanics Option

Biomechanics is the study of the structure, function and motion of the mechanical aspects of biological systems, at any level from whole organisms to organs, cells and molecules, using the methods of mechanics.

Why pursue Biomechanics?

Biomechanics draws from the traditional engineering discipline of mechanical engineering. You may wish to take the biomechanics track if you are interested in human motion, performance, disabilities, prosthetics or orthopedics. You may find biomechanics interesting if you want to learn more about the mechanical interaction of surgical tools with tissue, the impact of mechanical stimulation on engineered tissues, or the rapidly developing field of mechanobiology.

Why pursue Bioinstrumentation?

Bioinstrumentation draws from the traditional engineering discipline of electrical engineering. You may wish to take the bioinstrumentation track if you are interested in medical devices, such as biosensors and imaging systems, or robotic surgical tools. You may find bioinstrumentation interesting if you want to learn more about the electrical interaction of surgical tools with tissue, methods to image the engineered tissues post-translation, or the rapidly developing field of neurobiology.
