USE TECHNOLOGY FOR SOCIAL IMPACT!

ATLS 5250: Fieldwork Methods for ICTD

This course introduces the methods and models that can be employed in the design, development, and deployment of ICTD projects (information and communication technologies for development). This class will examine the applications of participatory research, ethnography, ethics in developing-world context, behavior change communication, monitoring and evaluation, and quantitative and qualitative data collection and (preliminary) analysis. The goal of this course is to build student confidence with multi-method approaches to "doing development" while giving students an opportunity to build and test a "toolbox" of useful and practical on-the-ground skills

Juniors & Seniors Welcome!
