

# **Vocabulary Acquisition and Predictors of Accelerated Vocabulary Growth**

EHDI

March 5, 2019

# Presenters and Authors

Allison Sedey, Ph.D., CCC-SLP, CCC-A<sup>1, 2</sup>

Allison.Sedey@Colorado.edu

Christine Yoshinaga-Itano, Ph.D.<sup>1</sup>

Christie.Yoshi@Colorado.edu

<sup>1</sup>University of Colorado-Boulder

<sup>2</sup>Colorado School for the Deaf and the Blind

# Additional Authors

---

Craig Mason, Ph.D.

University of Maine

# Today's Topics

---

- Describe NECAP
- Summarize sample characteristics
- Examine vocabulary growth over time
- Identify characteristics associated with better vocabulary outcomes
- Compare vocabulary development in children with unilateral vs. bilateral loss

# Participants

- All families participated in NECAP
  - National Early Childhood Assessment Project
  - CDC-supported project examining language outcomes at the national level
    - Birth to 3
    - Children who are deaf or hard of hearing

# States Represented in Sample

- Arizona
- California
- Florida
- Idaho
- Indiana
- Maine
- Minnesota
- New Mexico
- North Dakota
- Oregon
- South Dakota
- Texas
- Utah
- Wisconsin
- Wyoming

# Participant Criteria

- Bilateral hearing loss
  - (all degrees -- mild to profound)
- English is written language of the home
- No other disabilities thought to affect speech or language development

## Number of Participants/Assessments

- 837 children
- Assessed on 1 to 5 occasions
  - 436 children assessed once
  - 401 children assessed two or more times
- Total assessments = 1,499

# Participant Characteristics

- Chronological age
  - Range = 9 to 36 months
  - Mean = 25.4 months
- Boys = 54%; Girls = 46%

# Participant Characteristics: Adherence to EHDI Guidelines

Age at...	Median (mos)	Range (mos)
Identification	2	.05 to 31
Amplification	5	.5 to 36
Intervention	5	.25 to 35

\*69% of children were identified by 3 months of age

\*65% of children were in intervention by 6 months of age

\*57% of children met EHDI 1-3-6

# Participant Characteristics: Mother's Level of Education

Highest degree completed	% of primary caregivers
Less than HS	9%
High school diploma	37%
Vocational or Associates	19%
Bachelor's degree	25%
Graduate degree	10%

# Participant Characteristics: Communication Mode of Family

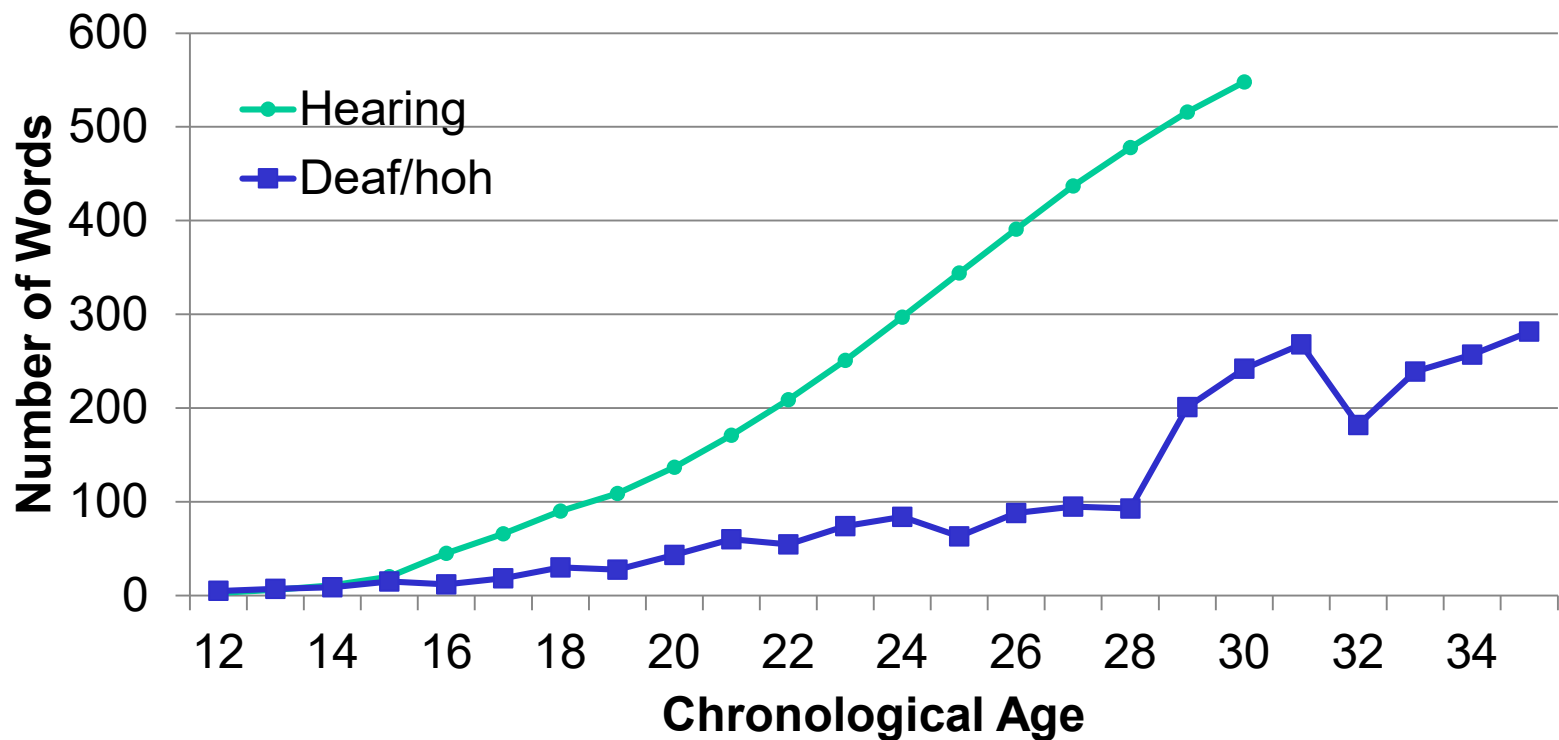

Communication mode used with child by family	% of primary caregivers
Primarily spoken language	71%
Spoken only	29%
Very occasional sign used	42%
Spoken + sign language	24%
Sign only	5%

# MacArthur-Bates Communicative Development Inventories

- Assesses expressive spoken and sign vocabulary
- Parent-report instrument
- Age score assigned based on number of words child produces in spoken or sign language

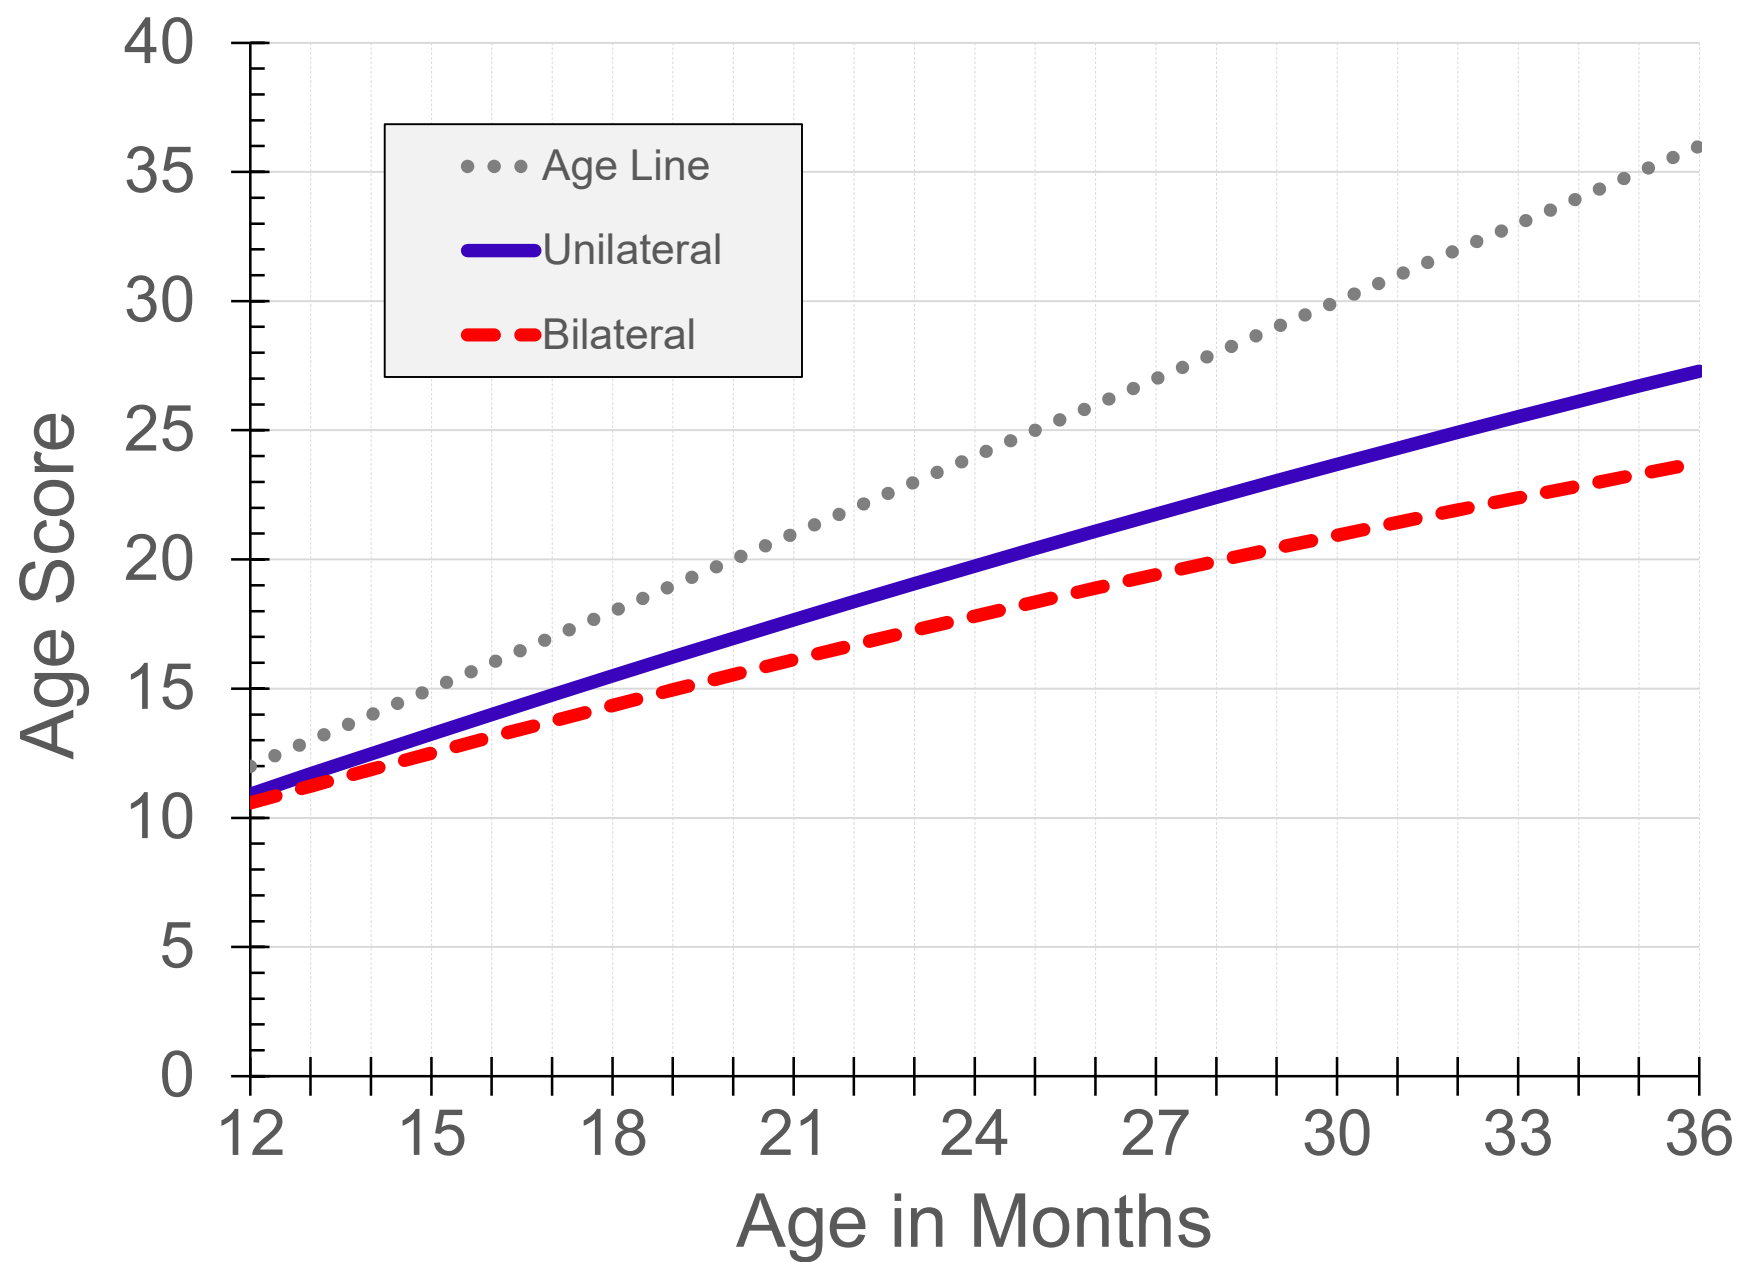

# MacArthur-Bates CDI: Expressive Vocabulary – 50<sup>th</sup> Percentile

## Participants with Unilateral Loss

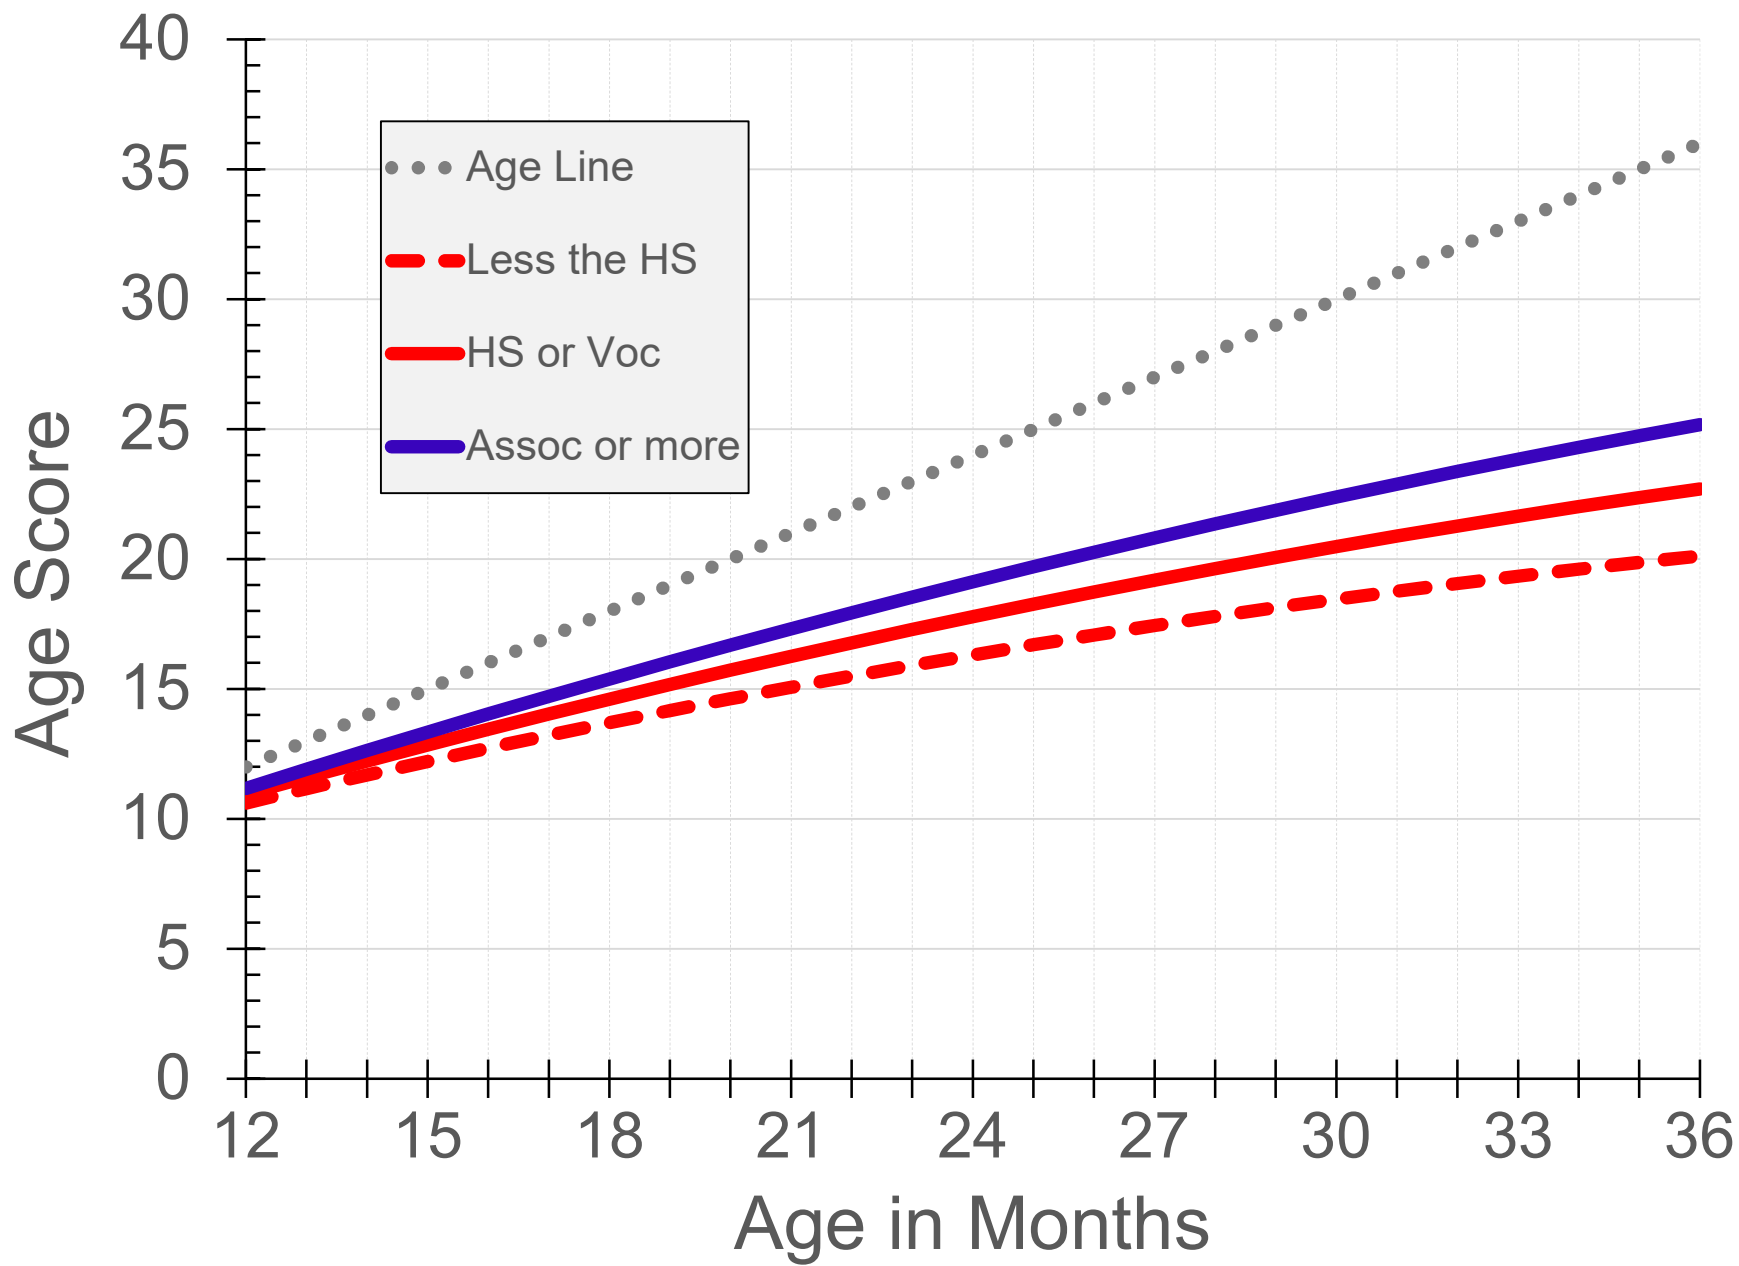

- 228 children
- Assessed on 1 to 5 occasions
- Total assessments = 409

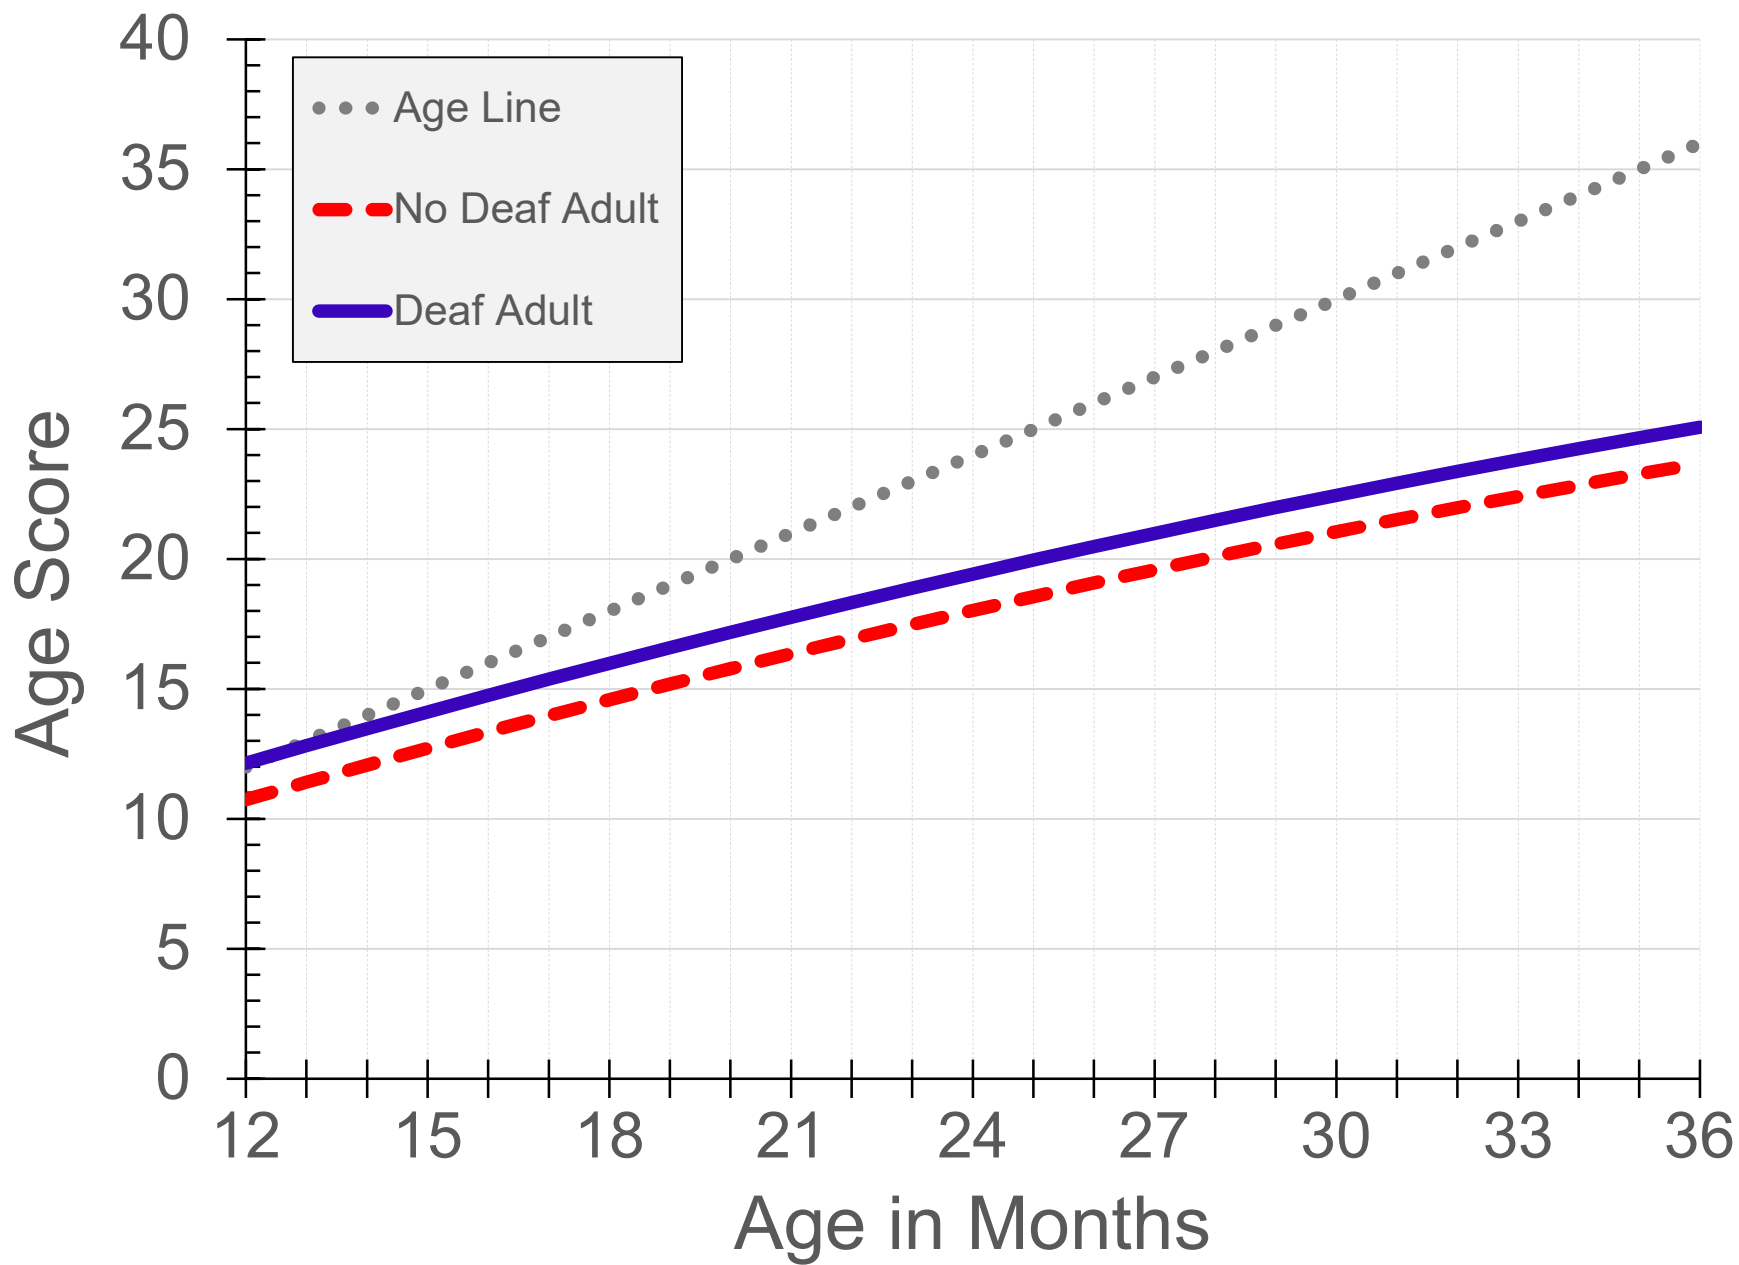

# Conclusions

- As language demands increase over time, gap between CA and Language Age widens
- Divergence from age expectations starts at:
  - 25 mos for general, surface structure expressive language
  - 20 mos for cognitive-linguistic skills
  - 16 mos for Expressive Vocabulary

# Conclusions

- By 35 months of age the gap between language age and chronological age is:
  - 7 mos for general, surface structure expressive language
  - 8 mos for cognitive-linguistic skills
  - 12 mos for expressive vocabulary

# Conclusions

- Beginning at 19 mos, hearing children produce 35 to 40 new words per month
- Beginning at 19 months, children who are deaf or hard of hearing average 15 new expressive words per month
- It is important for parents and interventionists to keep typical development in mind when assessing progress and setting goals

# Predictors of Better Language Outcomes: Multiple Regression

- Significant predictors of expressive vocabulary (based on most recent assessment):
  - Meeting 1-3-6 EHDI guidelines
  - Parent who is deaf or hard of hearing
  - Lesser degrees of hearing loss
  - Higher mother's level of education
  - Gap between CA and Language Age is widening over time
