

EONS Challenge

Explore real-world data collection with the **NASA-developed** STELLA 1.1 handheld spectroscopy device!

No prior experience is required.

Available sensor data:

- Near Infrared & Visible Light Sensors
- Ambient Air & Surface Temperature Sensors
- Pressure Sensor

STELLA devices collect data that complements LANDSAT **satellite observations** and can be used to study the following:

- Urban heat islands
- Plant drought stress
- Wildfire impacts
- Agricultural systems
- And more...
