About Us

We believe mentorship is key to finding your path in a STEM career, especially in navigating the unspoken rules of grad school.

**STEM Routes** aims to provide community-based support and career mentorship to underrepresented CU students as they find their paths in STEM. We do so by combining workshops, one-on-one mentoring, and social events. The result is an enriching, diverse community for both graduate and undergraduate students.

Get Involved!

Our vibrant community is a great way to find your niche at CU Boulder. STEM Routes provides early-career PhD students the enriching experience of mentoring undergrads through their own application process while also being mentored by more advanced PhD students.

With flexible involvement, you can dedicate as much time and effort as you have energy for. Here are some ways you can get involved:

- **Be a graduate mentor.** We’ll send undergraduates your way to learn more about the landscape of your field or get help emailing professors in the department to get involved in their research.

- **Join the planning team.** We meet for one hour weekly to discuss upcoming projects, events, and strategies. You decide which projects speak to you and how much time you have to engage each week.

- **Host Office Hours.** Dedicate at least one hour each week to host office hours on behalf of STEM Routes. Undergraduates drop in to ask questions about their STEM career, proofread applications, or just chat.

Join our email list to keep up with our workshops and social events!

stem_routes@colorado.edu
A hub for underrepresented students in STEM.

We support successful STEM pathways of historically underrepresented students through workshops, mentorship, and community.

STEM Routes builds a diverse, supportive community of graduate students who work together to bridge the gap between graduates and undergraduates and help underrepresented and first-generation students achieve their STEM career goals.
