

# Efficient and optimized use of lab space. . .

**. . .one of the most important climate  
actions to take when working in labs.**

Why? Lab spaces are large energy users due to ventilation needs. Maximizing lab space productivity is a win for science and energy efficiency.

## **CU Boulder 2024 Climate Action Plan (CAP)**

The CAP calls out labs as an important space to address in its recommendation for a campus-wide space optimization program.
