

TEXTBOOK TO BE USED BY GPTIs WHEN TEACHING
ECON 3818: INTRODUCTION TO STATISTICS WITH COMPUTER APPLICATIONS

The textbook is an integral part of the course. It helps the student learn the material and it also provides an easy reference to help GPTIs teach at the appropriate level. At its meetings on 14 November 2012 and 13 May 2013, the undergraduate curriculum committee decided that GPTIs, being relatively inexperienced, would benefit from guidance on textbooks when teaching core economic courses. Therefore GPTIs teaching Econ 3818: Introduction to Statistics with Computer Applications are required to use the following textbook:

Alan Caniglia: *Statistics for Economics: An Intuitive Approach*. Harper Collins.

This is currently out-of-print but can still be used with permission of the publisher. Please see Professor Don Waldman for details.

Because faculty are more experienced, this restriction on appropriate textbooks does not apply to instructors or tenure-track faculty.
