

What are the safety concerns?

When driving a motorized off-road vehicle (MOV), the safety of yourself and others must be your top priority. Hazards include falling off a moving vehicle, overturning the vehicle, collisions with objects or pedestrians, and stepping off a moving vehicle.

How to protect yourself

- Make sure only authorized drivers operate the MOV.
- Wear your seat belt.
- When operating a MOV for the first time; make sure you know which controls are used to start, stop, accelerate, backup and park.
- No riding on the backs, front or sides of the MOV.
- Keep your arms, legs and head inside the MOV at all times, unless using your left hand and arm for turn signals.
- Do not use a headset or cell phone while driving.
- Be aware of class changes. Pull over for students to pass when sidewalks are busy.
- Warn riders of bumps or obstacles that may make the MOV bounce and cause a passenger to fall out.
- Secure and properly store all equipment and supplies to prevent objects from falling out and/or striking people.
- When driving down a steep grade; reduce your speed and avoid sharp turns. Do not park on a steep incline.
- Always set the parking brake and remove the keys when leaving the MOV unattended.
- If the MOV is not operating properly, park it in a safe location, remove the key and notify your supervisor immediately.
- Never step off a moving vehicle.
- Traveling speed should never exceed 5 miles per hour on walking/working surfaces or 10 miles per hour in other areas.
- Only drive on sidewalks (not roads) and cross roadways at designated crosswalks.
- When charging the MOV battery, make sure the cord is safe and undamaged before plugging in.
