Welcome to the Meaning of IT

In this course, we will consider what it means to be active citizens in a networked digital age. We'll look at historical case studies in past IT adoption, unintended consequences and futuristic predictions. We will examine the big thematic thread of the search for authentic information, whether in digital imagery, viral video, or sound formats. We will look at digital rights management, government regulation of IT and the legal and personal implications of being public on the web, and we will consider the concept of privacy as a recent societal value. The largest portion of the semester will be dedicated to the examination of IT's modification of our social behavior, and of our means of gathering, interacting with, displaying and using information. We will consider who we are and who we become in social networks, online games and in virtual worlds. Most fundamentally, we will explore the question of what it means to be human in a rapidly-changing world.

Announcements

**review sheet for test 2 posted to syllabus** Here is your hive-mind shared review document. Here is the review sheet as a word doc, and here it is as a printable PDF.
