This additional email is targeted specifically to OIT DDS-supported animal researchers. For both Windows and Mac users, you may ignore the previous emails with instructions. This is because OIT-DDS has automatically provided the below two solutions for you.

If you run into any difficulties with these solutions, please contact your local OIT-DDS support person.

**Mac Users – DDS-specific Instructions for Accessing Topaz VDI Environment:**

Local administrative rights are not required for DDS supported users. Instead, the Topaz VDI solution is available to install via DDS Self Service.

*Note:* If you are a member of a DDS-supported department but your system is not currently enrolled but you would like DDS support, contact DDS at [https://desktopsupport.colorado.edu](https://desktopsupport.colorado.edu)

To access Topaz using this method, please follow these steps:

1. Go to /Applications and open Self Service, or perform a Spotlight search for “Self Service”. It will appear like this:

2. Find the “TOPAZ – VMware Horizon VDI Client” option and choose **Install**.

3. The VMware Horizon Client application will be installed, along with a customized link to the Topaz VDI solution. The customized like will appear in Applications as “TOPAZ” with this icon:

4. This will open the VMware Horizon client application directly to the correct address ([https://virtualdesktops.colorado.edu](https://virtualdesktops.colorado.edu)). Login using your Identikey credentials:
5. When you first login to the VDI environment, you will see the following prompt asking to share your system’s home folder and removable storage. Click allow:

![Sharing Prompt]

**Windows Users**

OIT has created a desktop shortcut for TOPAZ Elements. You should see this new icon immediately. By clicking on this icon, Topaz will open in Internet Explorer.
