# MATH 2510 Introduction to Statistics
Instructor: Dr. Ilia Mishev

General Education: Quantitative Skills

This is an introductory course in statistics. We will cover some of the fundamental ideas and tools used in statistics.

Topics that we will cover include elementary statistical measures, statistical distributions, statistical inference, hypothesis testing and linear regression. We will also go over some of the basics of probability as they are necessary for our understanding of statistics.

In this course, we will have a small number of enrolled students. This will allow us to get to know each other a lot better and have a lot more support for one another.
