## PREFACE

Avalanche phenomena have been known, appreciated, and feared for hundreds of years in all those areas of the world where people, initially agriculturalists, have lived in high mountain lands subject to heavy snow accumulation. Only a small fraction of the total human experience with avalanches has been recorded and handed down to us and the completeness of the record is highly variable from place to place, with Switzerland, France and Austria accounting for a large share of it. Yet even here, detailed, accurate observations adequate for the provision of a sound basis for late-twentieth century development of mountain lands, is frequently lacking. Even so, the mountain systems of western North America, by comparison, are virtual unknowns.

The growth of serious tourist and recreational use of the Alps at the turn of the century, with an enormous acceleration after 1950, have witnessed such an increase in man-made structures and total number of summer and winter visitors, that the avalanche hazard has grown at an alarming rate. The Alpine countries, and especially Switzerland, have pioneered the areas of avalanche and snow mechanics research and the application of the ensuing expertise to development of mountain land-zoning policies. The great burst of developmental activities in the mountains of the North American West, dependent upon acceleration of recreational interests, lagged some 15 years behind the European experience, and is still far from comparable in terms of intensity of land use. Nevertheless, the avalanche hazard problem and the thorny questions of land-use planning are primary issues of the 1970's and 1980's forced by the mushroom growth of ski resorts, increasing interest in winter back-country experience, and expansion of mountain living and transportation across mountainous areas in general. It was within this latter-day context that the Institute of Arctic and Alpine Research (INSTAAR) of the University of Colorado, became very much involved in avalanche research and in natural hazards in mountains in general.

In 1971 a four-year task was commissioned by the Bureau of Reclamation (United States Department of the Interior) whereby INSTAAR became responsible for an attempt to develop an avalanche forecast system for the northern San Juan Mountains (Bureau of Reclamation Contract No. 14-06-D-7155).

This resulted in establishment of a base in Silverton for both winter and summer field operations. As our experience increased many other facets were added to the original program. These included studies in snow mechanics and temperature gradient metamorphism, supported by United States Army Research Office, Durham (ARO DAHCO4-75-G-0028), experimentation with alternate methods to explosives for avalanche release, funded by the Colorado State Highways Department, the Washington State Highways Department and the Federal Department of Transportation, and many studies in snow hydrology, climatology and geomorphology that were identified as graduate student dissertation topics. A major additional step was initiation of a continuing research grant from the Office of University Affairs, NASA, for application of remote sensing techniques to the solution of land-use problems in mountainous terrain. A large element of this effort has so far been devoted to identification of areas subject to avalanche and other natural hazards in specific areas such as Vail and adjacent land along Gore Creek, Crested Butte, Telluride and Ophir. More recently special attention has been given to county-wide mapping at a scale of 1:24,000 in San Juan, San Miguel and Ouray counties. This has been linked to the requirements of Colorado State House Bill 1041 and has been initiated by county request and conducted in collaboration with the Colorado Geological Survey. Finally, observations on avalanche events, obtained on a daily basis through four winters, have been reported to staff of the National Forest Service Avalanche Warning Center, Rocky Mountain Forest and Range Experiment Station, Fort Collins, and incorporated into the generalized State avalanche warning system.

This Avalanche Atlas for highways 550 and 110 within San Juan County, derives support from all of these activities as well as the County authorities themselves. Actual financial support was provided by the San Juan County Commissioners and the Bureau of Reclamation (Contract 14-06-D-7155). A special acknowledgment is accorded to Mr. Allen Nossaman, County Land Use Planner, for without his foresight and encouragement this atlas would not have been compiled. Many numbers of the INSTAAR San Juan Avalanche Project have contributed: in particular Len Miller provided the photography, maps, summary sheet technical data and final collation and editing; Richard and Betsy Armstrong compiled the terrain and vegetation data and Betsy the historical data; additional vital assistance was provided by Tom Carroll, Bill McClelland and Rod Newcomb. Finally the hand of Ed LaChapelle lies

upon all of our avalanche activities as consultant, investigator, colleague and Research Associate of INSTAAR.

In conclusion a word must be added concerning the context of the Atlas. It is an atlas, albeit highly specialized, and nothing more. The intention is to provide data in various forms, maps, photographs, and avalanche summary sheets. It is being complemented by other forms of publication: a compilation of historical data by Betsy Armstrong, to be published as INSTAAR Occasional Paper No. 18; a scientific report on the four-year avalanche study by Richard Armstrong, Edward LaChapelle, Michael Bovis and Jack D. Ives, to appear as INSTAAR Occasional Paper No. 19; county-wide natural hazard mapping by Michael Bovis and Rebecca Summer, and numerous technical papers and reports. The entire collection is identified as a vital segment of INSTAAR's overall research operation and is designated a part of the United States contribution to the Unesco\* Man and the Biosphere Program (MAB): Project 6 - study of the impact of human activities on mountain and tundra ecosystems. The Atlas is dedicated to the people of San Juan County, both past and present, whose keen observational faculties, and fortitude in living with the avalanche hazard have so frequently provided us with scientific insights and invaluable historical data.

Jack D. Ives  
Director, INSTAAR  
Chairman, United States MAB Project 6A

## INTRODUCTION

The San Juan Avalanche Atlas was developed for the San Juan Planning Commission and the San Juan County Commissioners. It is intended to aid those in need of information concerning avalanche hazards related to land use planning.

The idea of an avalanche atlas is not a new one; the Swiss were interested in compiling a register of avalanches in the 1800's. In North America, the first avalanche atlas was produced by the U. S. Forest Service for use by the Colorado Department of Highways in 1964 and is still being used for avalanche control, highway design, and highway maintenance. Similar atlases were developed in Washington State. The Washington State Department of Highways avalanche atlases are more detailed than the original Colorado atlas and include all avalanche paths affecting the highways.

The San Juan Avalanche Atlas attempts to take the next step in the evolution of the avalanche atlas in North America by providing more detailed information on the summary sheet than has been attempted in the past. Detailed technical data are supplied for each path and may be helpful to those interested in designing defensive structures for buildings, highways, etc. The information is not intended for critical engineering purposes, but rather as a guide for subsequent data gathering where necessary.

The atlas is a catalog of avalanche activity which has been observed from the late 1870's through 1975 along highways 550 and 110 in San Juan County, Colorado. However, all known avalanche paths visible from these highways are not included; only paths for which data are readily available are cataloged.

Additional information may be added to the atlas without difficulty since a separate sheet is devoted to each path. It is also emphasized that references may bracket avalanche events that have a return period ranging from once every significant snowfall to once in a hundred years or more. To assist with the continued improvement of our historical record, would atlas users in the San Juans please inform INSTAAR of any avalanche event they are able to observe. Time of day, date, and size of event should be noted and information mailed to: Director, Institute of Arctic and Alpine Research, University of Colorado, Boulder, Colorado 80309.

An explanation of the terms used follows:

MAPS:

All maps are 7½' USGS topographic reproductions with a scale of 1" = 2000'. Each avalanche path is outlined and numbered. Arrows within a path indicate observed directions of flow of avalanche material. The outlines are only a rough boundary of the path and do not indicate absolute limits for land use planning purposes. These limits can only be established by a detailed ground study of the path in question.

PHOTOGRAPHS:

Photographs were taken with a 35 mm camera from a light aircraft. Only low level oblique photographs were taken. Each path is outlined on the photograph and numbered.

AVALANCHE SUMMARY SHEETS:

Path name(s): The common name or names currently used are given. Where more than one name is currently used, all are included.

Path reference number: All paths have been cataloged with a reference number which allows it to be placed in a computer for easy retrieval. The first three digits signify the station. The remaining three refer to the avalanche path. (A station number is a National Forest Service classification number for a highway, mine, or a town. A single station may include more than one zone).

Zone: A zone is a region of geographic similarity; for example the deep valley from Silverton to Gladstone (Cement Creek) is considered a single zone.

Area: This category groups paths with similar release characteristics.

Map number: Each map in the atlas is numbered. This number appears on all avalanche summary sheets to which it applies.

Photograph number: Each photograph is numbered. This number appears on all avalanche summary sheets to which it applies.

Specifications:

Elevations and vertical fall: Elevations and vertical fall are taken directly from 1:24,000 scale maps.

Path lengths: Path lengths are computed as the sum of the individually calculated lengths for each of the three segments of the avalanche path.

Number of starting zones: The number of starting zones are obtained from maps and field observations. In cases where the number of starting zones is difficult to obtain due to the complexity of terrain the term multiple is used.

Starting zone: The starting zone is the section of the path where the initial rupture of the snow-pack occurs and the avalanche begins its downward course.

Track: The track is that section of the path that funnels or guides the mass of falling snow from the starting zone to the runout zone.

Runout zone: The runout zone is the section of the path where an avalanche comes to rest. This is the hazard zone principally because it is frequently characterized by valley bottom slopes which provide some of the few areas in mountains that have slopes gentle enough for construction purposes.

Slope, track, and runout angles: The angles for the starting, track, and runout zones were all calculated from map data and measurements taken from the maps by a scaled ruler.

Acreages: Acreages were calculated from data taken from maps by ruler.

Mean widths: Mean widths were measured on the maps.

Tree line: The tree line data were obtained from maps and field observations. The letter (B) indicates below timberline; (A) indicates above timberline.

Terrain and vegetation cover: Subjective descriptions of the terrain and vegetation of the paths are given including topographic features, vegetation cover and location.

#### HISTORY:

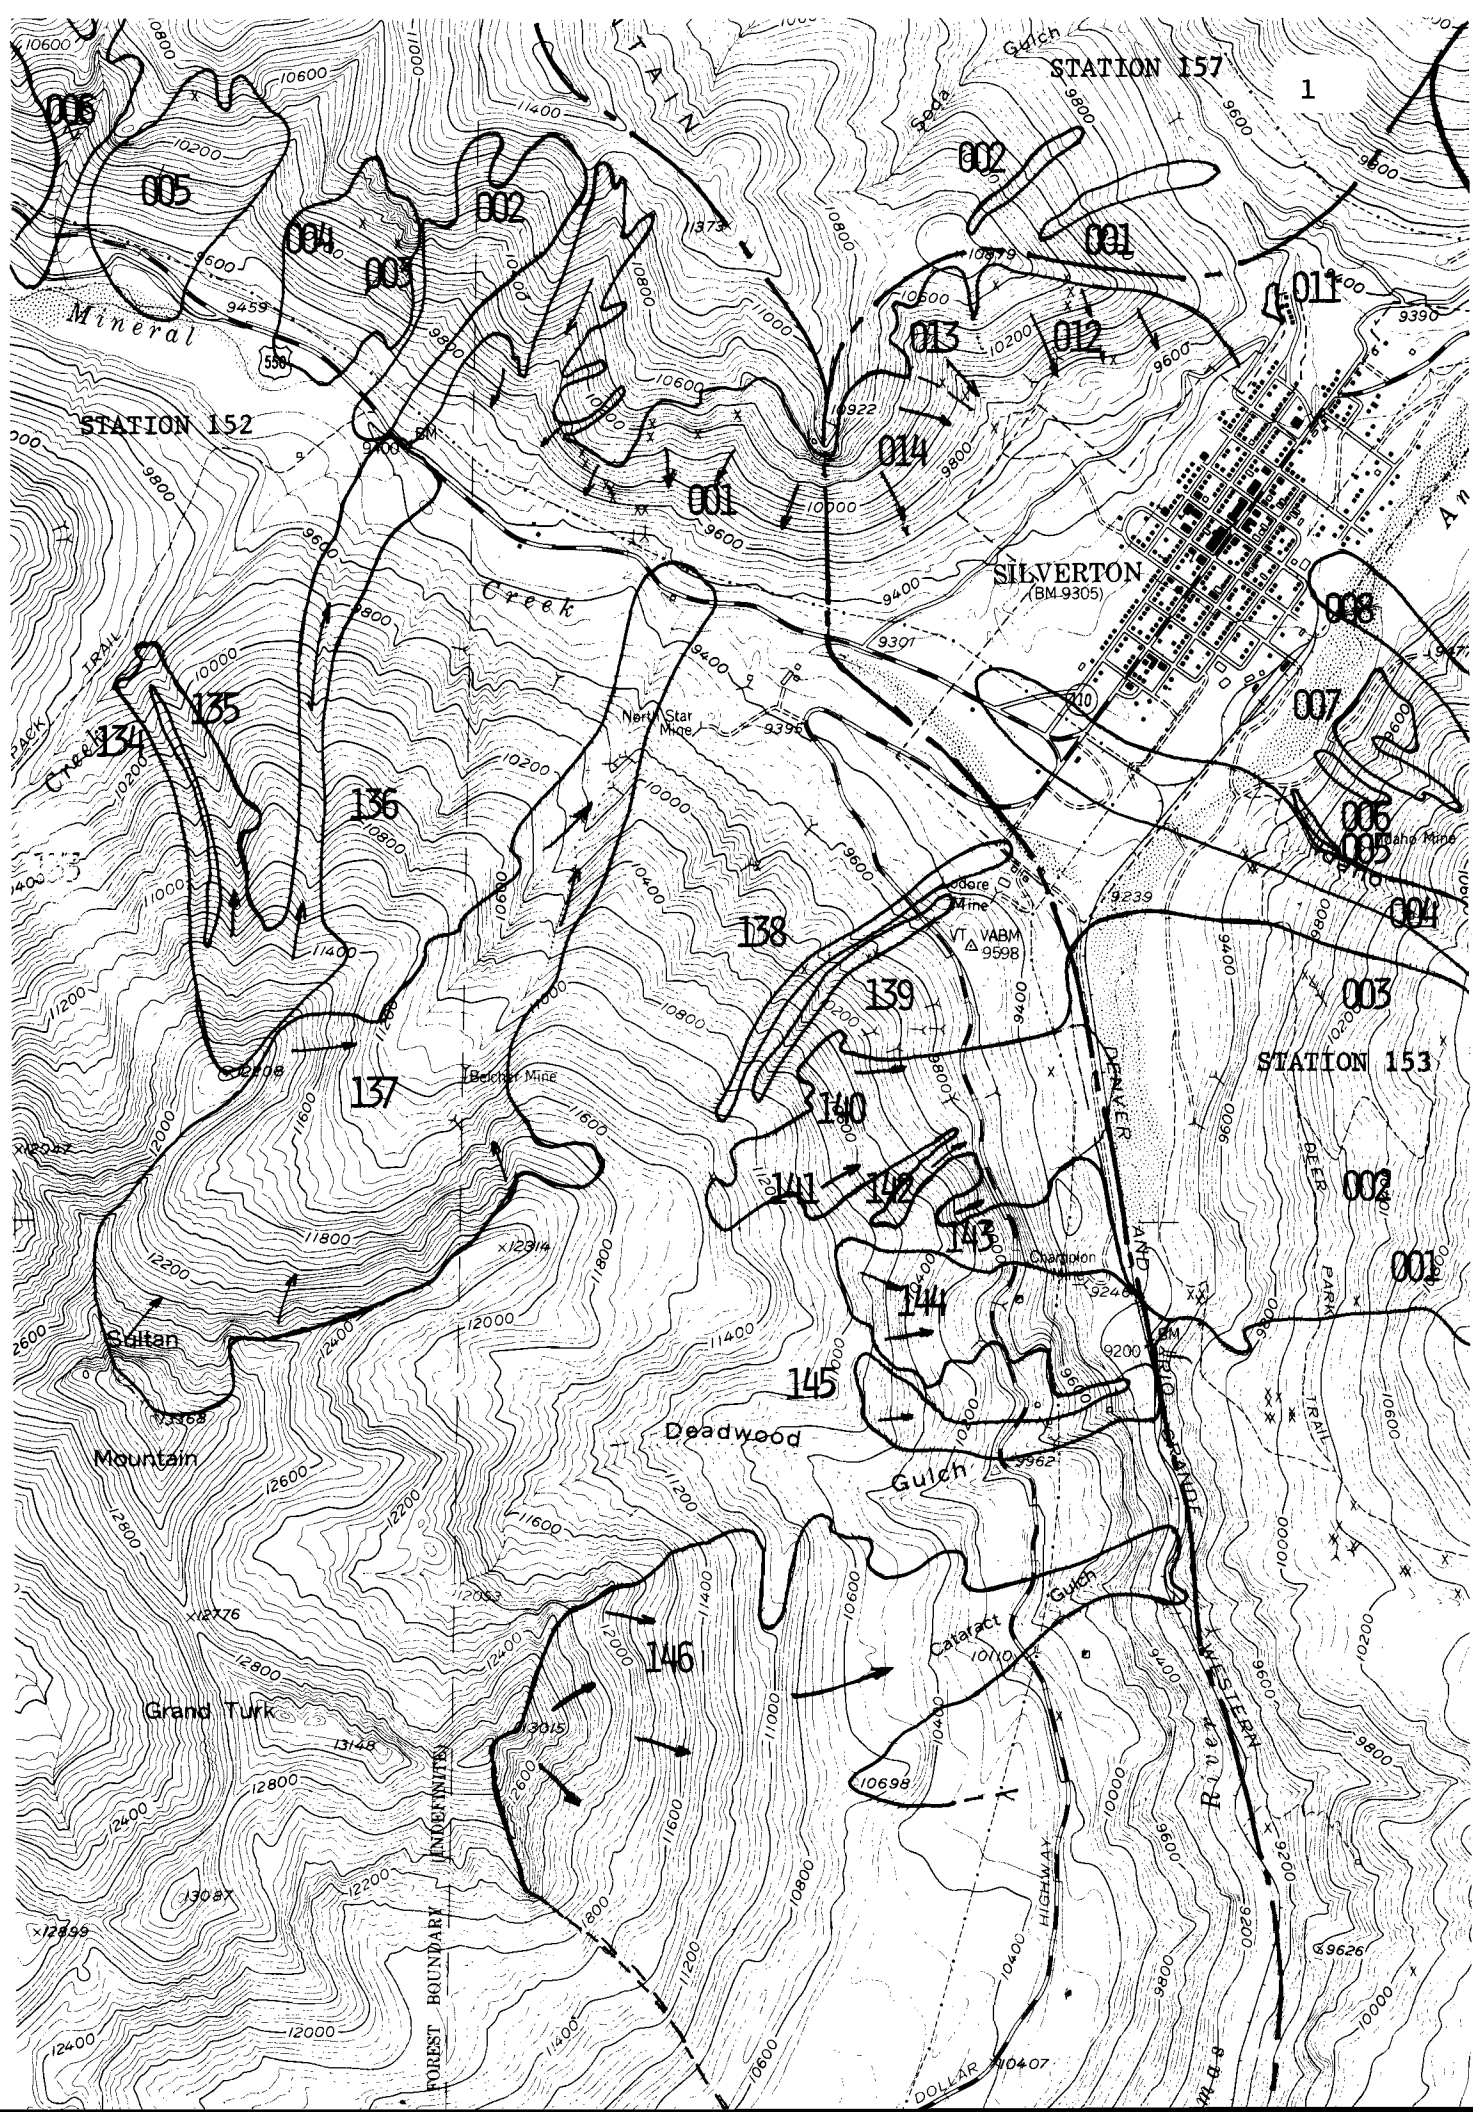

The history of each avalanche path is described in the following three categories:

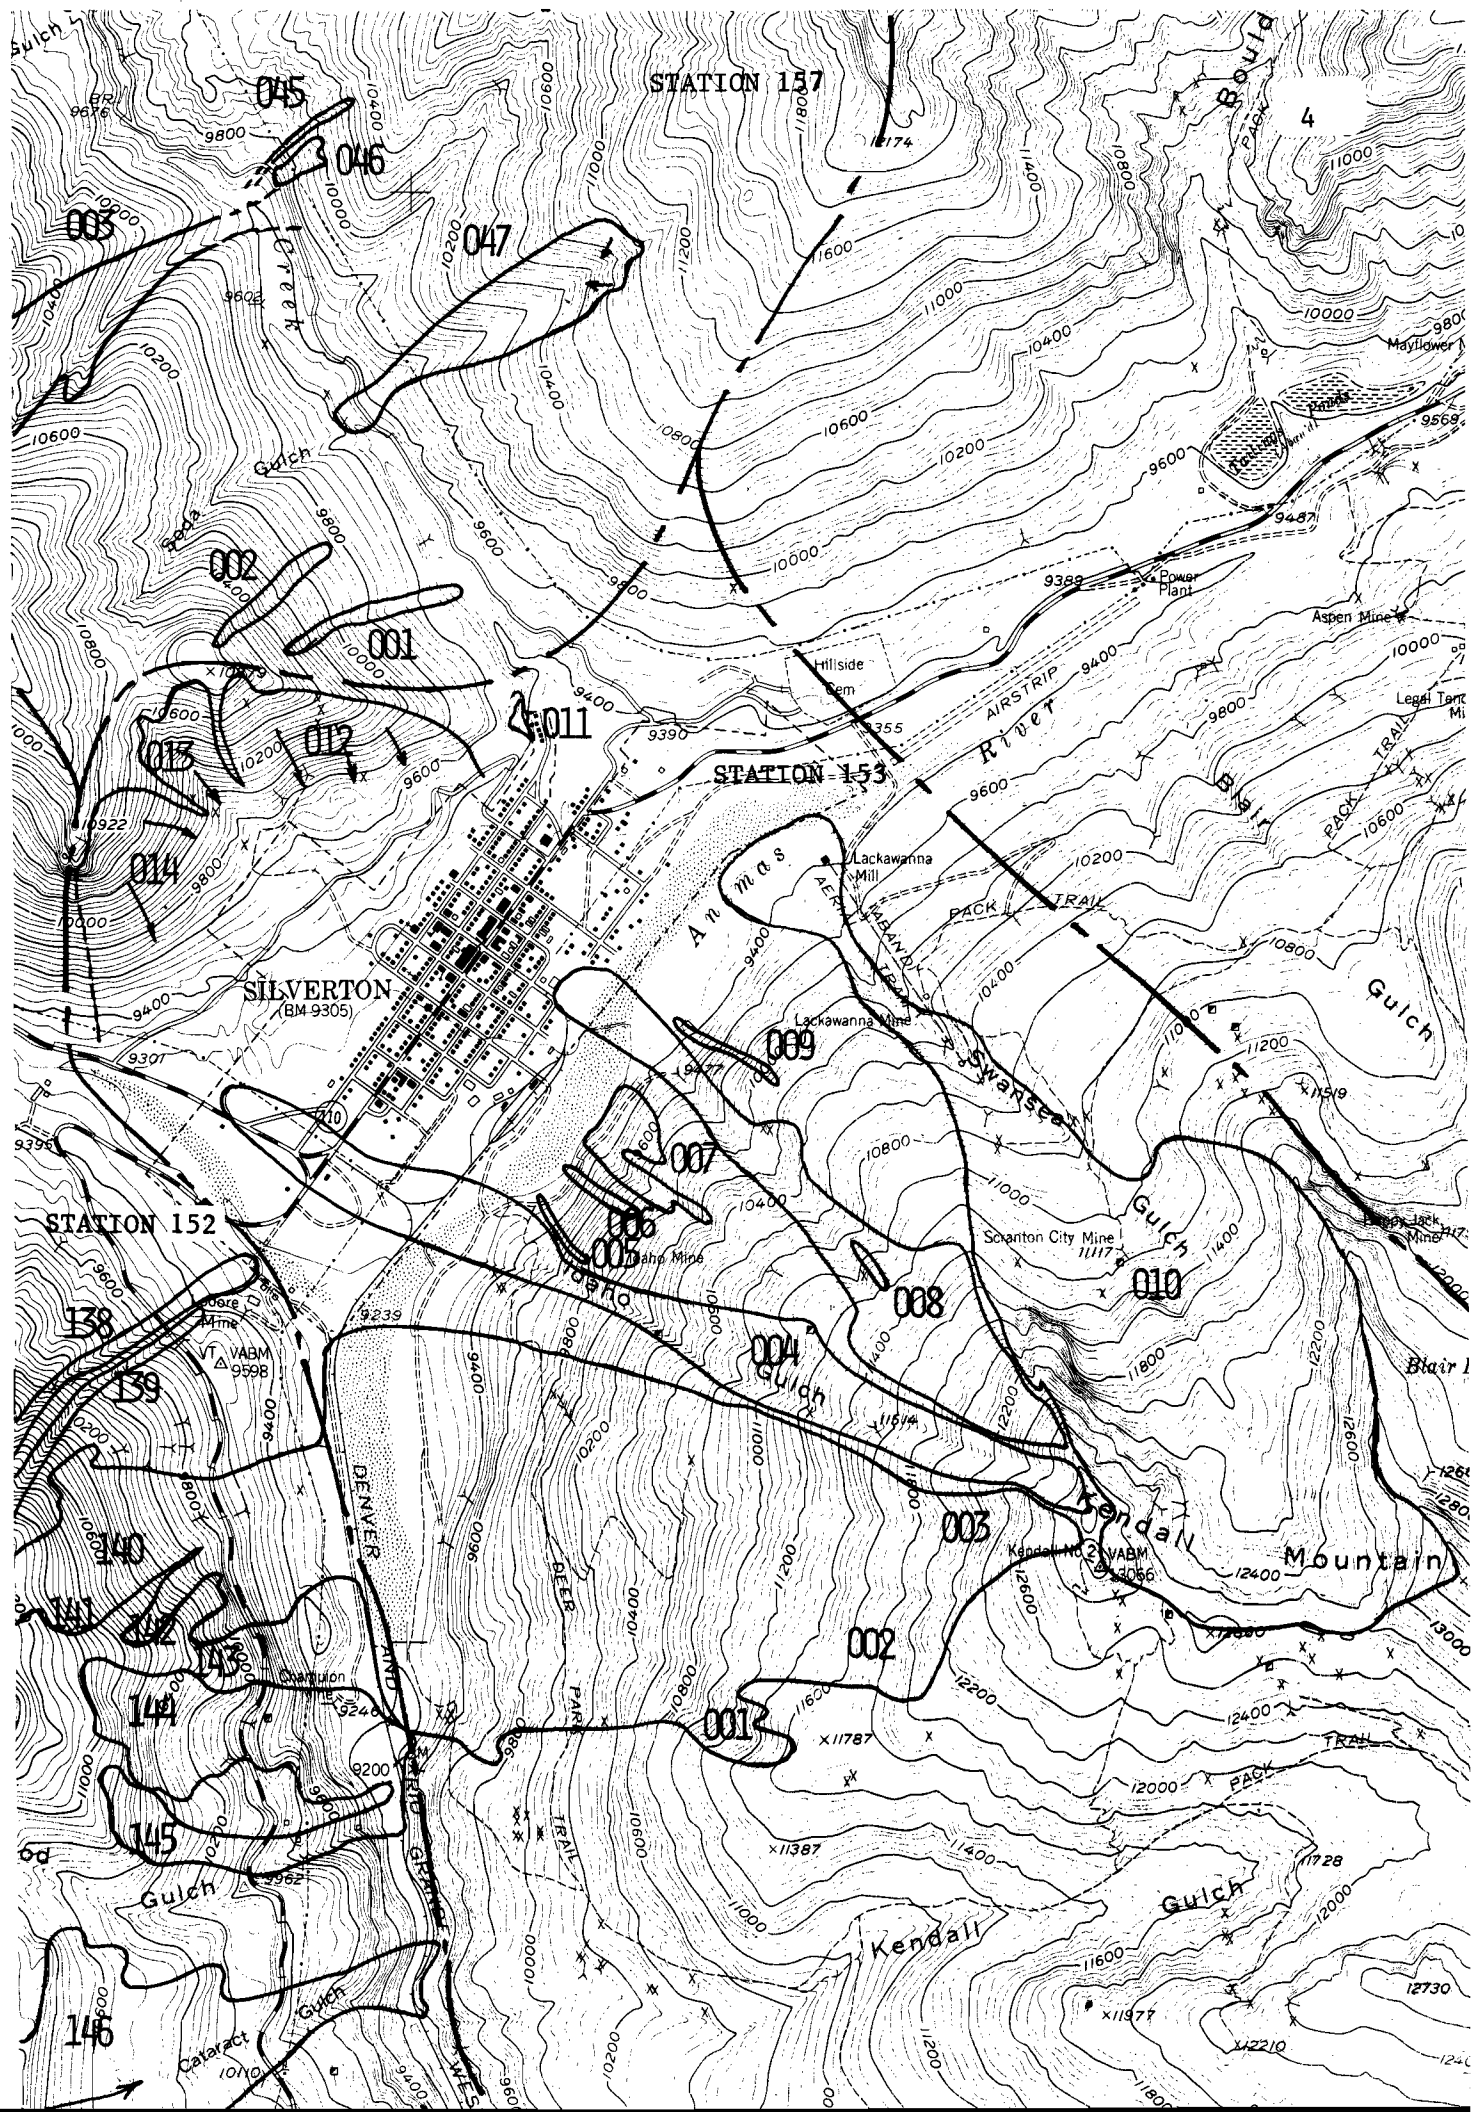

- I. Historical data for the period 1879-1938(B. Armstrong, 1976, Century of Struggle Against Snow - A History of Avalanche Hazard in San Juan County, Colorado.)
- II. Data collected by the Colorado Highway Department for period 1951-1971  
Data obtained from personal communications with Louis Dalla, Durango, Colorado; Herman Dalla, Silverton, Colorado; and James Bell, Silverton, Colorado, for period 1938-1971.
- III. Data collected by the San Juan Avalanche Project, INSTITUTE OF ARCTIC AND ALPINE RESEARCH, University of Colorado, for period 1971-1975.

Path Reference Number: 152156 Zone: I Area: 3

Map Number: 7,8 Photograph Number: 37,38

### SPECIFICATIONS:

Top Elev.: 10280' Bottom Elev.: 10200' Vertical Fall: 80'

Length of Path: 128' Number of Starting Zones: Multiple

	<u>Starting Zone</u>	<u>Track</u>	<u>Runout Zone</u>
Slope Angle	<u>39°</u>	<u>--</u>	<u>0</u>
Area Acres	<u>4</u>	Mean Width <u>--</u>	Area Acres <u>1</u>
		Length <u>--</u>	
Tree Line	<u>B</u>	<u>B</u>	<u>B</u>

### TERRAIN AND VEGETATION COVER:

Starting Zone: Broad bowl-shaped depression, exposed bedrock and talus, moderate aspen, grass and bare ground

Track: Broad bowl-shaped depression, exposed bedrock bands, grass and bare ground

Runout Zone: Broad open slope, talus, bare ground with willows and grass below

HISTORY: II. crossed highway: 19

III. events: 1  
highway: 0  
full-track: 1

## Avalanche Summary Sheet

PATH NAME ('s): Coal Creek East

Path Reference Number: 152157 Zone: I Area: 2

Map Number: 8 Photograph Number: 37,38

### SPECIFICATIONS:

Top Elev.: 10500' Bottom Elev.: 10300' Vertical Fall: 120'

Length of Path: 156' Number of Starting Zones: 4

	<u>Starting Zone</u>	<u>Track</u>	<u>Runout Zone</u>
Slope Angle	<u>54<sup>o</sup></u>	<u>--</u>	<u>0</u>
Area Acres	<u>2</u>	Mean Width <u>--</u>	Area Acres <u>.4</u>
		Length <u>--</u>	
Tree Line	<u>B</u>	<u>B</u>	<u>B</u>

### TERRAIN AND VEGETATION COVER:

Starting Zone: Shallow depression, light coniferous, grass and bare ground

Track: Broad open slope, exposed bedrock, boulders, road cut and bare ground

Runout Zone: Broad open slope, boulders, brush and bare ground

HISTORY: II. (157 and 158)  
crossed highway: 11

III. events: 7  
highway: 1  
full-track: 1

# Avalanche Summary Sheet

PATH NAME ('s): Coal Creek West

Path Reference Number: 152158 Zone: I Area: 2

Map Number: 8 Photograph Number: 38

## SPECIFICATIONS:

Top Elev.: 10760' Bottom Elev.: 10300' Vertical Fall: 460'

Length of Path: 1011' Number of Starting Zones: Multiple

	<u>Starting Zone</u>	<u>Track</u>	<u>Runout Zone</u>
Slope Angle	<u>26°</u>	<u>23°</u>	<u>39°</u>
Area Acres	<u>1</u>	Mean Width <u>100'</u>	Area Acres <u>2</u>
		Length <u>762'</u>	
Tree Line	<u>B</u>	<u>B</u>	<u>B</u>

## TERRAIN AND VEGETATION COVER:

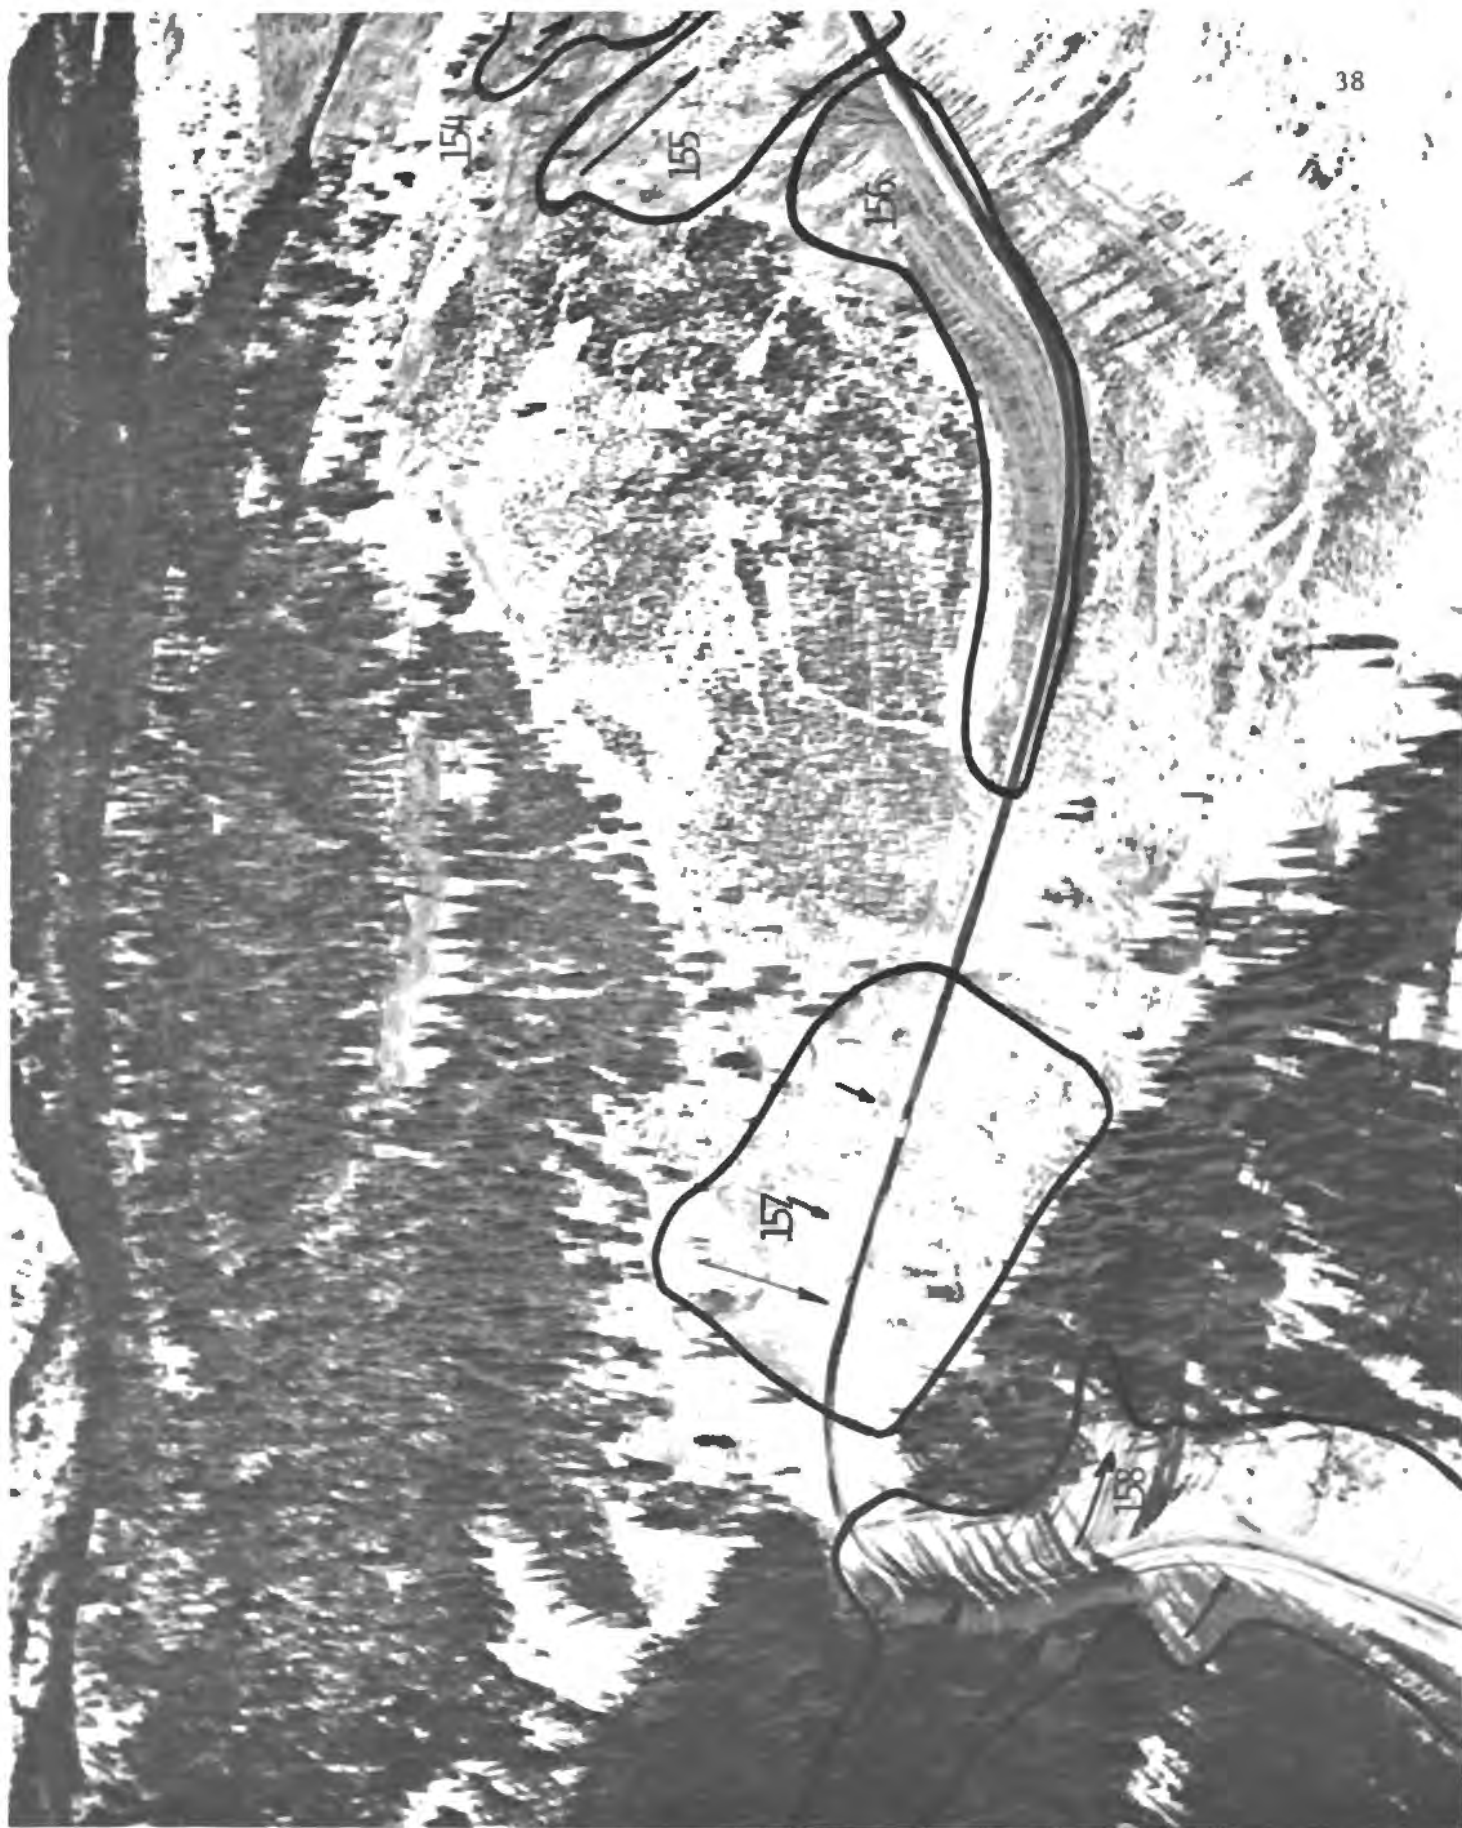

Starting Zone: Broad open slope, exposed vertical bands of bedrock, moderate coniferous and grass

Track: Broad open slope, exposed vertical bands of bedrock, light coniferous, grass and bare ground

Runout Zone: Broad open slope, heavy coniferous and grass

HISTORY: II. (157 and 158)  
crossed highway: 11

III. events: 10  
highway: 2  
full-track: 5

## Avalanche Summary Sheet

PATH NAME ('s): Engineer Mtn. A

Path Reference Number: 152159 Zone: I Area: 1

Map Number: 8 Photograph Number: 39

Top Elev.: 11000' Bottom Elev.: 9520' Vertical Fall: 580'

Length of Path: 3435' Number of Starting Zones: Multiple

	<u>Starting Zone</u>	<u>Track</u>	<u>Runout Zone</u>
Slope Angle	<u>42°</u>	<u>22°</u>	<u>16°</u>
Area Acres	<u>6</u>	Mean Width <u>200'</u>	Area Acres <u>8</u>
		Length <u>1618'</u>	
Tree Line	<u>B</u>	<u>B</u>	<u>B</u>

### TERRAIN AND VEGETATION COVER:

Starting Zone: Open talus, rock and light coniferous.

Track: Deeply cut v-gulley with rock and talus. Some grass and willows.

Runout Zone: Broad open talus slope with grass, creek.

### HISTORY:

**INSTITUTE OF ARCTIC AND ALPINE RESEARCH  
OCCASIONAL PAPERS**

Numbers 1 through 5 are out of print. A second edition of Number 1 is available from the author. Numbers 2, 4, and 5 are available from National Technical Information Service, U.S. Department of Commerce. For details, please write to INSTAAR.

6. *Guide to the Mosses of Colorado*. By W.A. Weber. 1973. 48 pp. Order from the author, University of Colorado Museum, Boulder, Colorado 80309. \$2.50.
7. *A Climatological Study of Strong Downslope Winds in the Boulder Area*. By W.A.R. Brinkmann. 1973. 228 pp. Order from the author, Institute for Environmental Studies, University of Wisconsin, 1225 West Dayton Street, Madison, Wisconsin 53706.
- †8. *Environmental Inventory and Land Use Recommendations for Boulder County, Colorado*. Edited by R.F. Madole. 1973. 228 pp. 7 plates. \$6.00.
- †9. *Studies of Climate and Ice Conditions in Eastern Baffin Island*. 1971-73. By J.D. Jacobs, R.G. Barry, R.S. Bradley, and R.L. Weaver. 1974. 77 pp. \$3.00.
- †10. *Simulation of the Atmospheric Circulation Using the NCAR Global Circulation Model With Present Day and Glacial Period Boundary Conditions*. By J.H. Williams. 1974. 328 pp. \$4.75.
11. *Solar and Atmospheric Radiation Data for Broughton Island, Eastern Baffin Island, Canada, 1971-73*. By J.D. Jacobs. 1974. 54 pp. (Out of print.)
12. *Deglacial Chronology and Uplift History: Northeastern Sector, Laurentide Ice Sheet*. By A.S. Dyke. 1974. 113 pp. (Out of print.)
- †13. *Development of Methodology for Evaluation and Prediction of Avalanche Hazard in the San Juan Mountains of Southwestern Colorado*. By R.L. Armstrong, E.R. LaChapelle, M.J. Bovis, and J.D. Ives. 1975. 141 pp. \$4.75.
- †14. *Quality Skiing at Aspen, Colorado: A Study in Recreational Carrying Capacity*. By C. Crum London. 1975. 134 pp. 3 plates. \$5.50.
- †15. *Palynological and Paleoclimatic Study of the Late Quaternary Displacements of the Boreal Forest-Tundra Ecotone in Keewatin and Mackenzie, N.W.T., Canada*. By H. Nichols. 1975. x + 87 pp. \$4.00.
- †16. *Computer Techniques for the Presentation of Palynological and Paleoenvironmental Data*. By M. Nichols, M. Eccles, and H. Nichols. 1976 (in press).
- †17. *Avalanche Atlas: San Juan County, Colorado*. By L. Miller, B.R. Armstrong, and R.L. Armstrong. 1976. 260 pp. 60 plates. \$4.25.
- †18. *Century of Struggle Against Snow: A History of Avalanche Hazard in San Juan County, Colorado*. By B.R. Armstrong. 1976 (in press).
- †19. *Avalanche Release and Snow Characteristics, San Juan Mountains, Colorado*. Edited by R.L. Armstrong and J.D. Ives. 1976 (in press).
- †20. *Landslides Near Aspen, Colorado*. C.P. Harden. 1976 (in press).

†Order from INSTAAR, University of Colorado, Boulder, Colorado 80309. Orders by mail add 65 cents.

*Occasional Papers* are a miscellaneous collection of reports and papers on work performed by INSTAAR personnel and associates. Generally, these papers are too long for publication as journal articles, or they contain large amounts of supporting data that are normally difficult to publish in the standard literature.
