Project Code: COL00013
Project Name: Fall 2024 Survey of Colorado
Prepared for: Anand Sokhey, University of Colorado Boulder
Interviews: 800
Field Period: October 18, 2024 – October 30, 2024
Project Manager: Alexis Essa alexis.essa@yougov.com

=====

YouGov interviewed 862 respondents from Colorado who were then matched down to a sample of 800 to produce the final dataset. The respondents were matched to a sampling frame on gender, age, race, and education. The sampling frame is a Colorado subset of politically representative "modeled frame" of US adults, based upon the American Community Survey (ACS) public use microdata file, public voter file records, the 2020 Current Population Survey (CPS) Voting and Registration supplements, the 2020 National Election Pool (NEP) exit poll, and the 2020 CES surveys, including demographics and 2020 presidential vote.

The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, 2020 presidential vote choice, years of education, and home ownership. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The weights were then post-stratified on 2020 presidential vote choice and political interest and then raked (iterative proportional fitting) on gender, age (4-categories), race (4-categories), and education (4-categories), to produce the Gen Pop weight.

The weighted Gen Pop sample was then subset on Likely Voters and trimmed and recentered to create a Likely Voter weight.
