==========
Project Code: COLO0021
Project Name: Fall 2026 Survey of Colorado
Prepared for: Anand Edward Sokhey, University of Colorado - Boulder
Interviews: 800
Field Period: October 09, 2026 - October 20, 2026
Project Manager: Alexis Essa, alexis.essa@yougov.com
==========
How the data were processed and procedures to ensure data quality:

Panelists eligible for participation in our surveys have been members of the YouGov panel for at least 15 days and have passed a series of quality checks. In addition to the original screening, the survey included a set of items meant to ensure respondents were paying attention. Open-ended questions were reviewed to ensure that respondents were on task as well. Respondents were also evaluated on the basis of the time it took them to complete the survey, with those who responded too quickly excluded from the final data. Ultimately, out of the 1761 respondents who started the survey, 664 did not complete the survey, 68 were screened out for eligibility purposes and 0 were terminated for failing to pass an initial attention check. Of the remaining 1029 complete cases, 172 were removed for data quality reasons. An additional 57 cases were removed in our matching process, resulting in a final sample size of 800.

How the data were weighted:

The respondents were matched to a sampling frame on gender, age, race, and education. The sampling frame was constructed by stratified sampling from subsetted sample of the 2024 Current Population Survey (CPS) 1-year on Colorado Residents with selection within strata by weighted sampling with replacements (using the person weights on the public use file).

The matched cases were weighted to the sampling frame using propensity scores. The matched cases and the frame were combined and a logistic regression was estimated for inclusion in the frame. The propensity score function included age, gender, race/ethnicity, years of education, and home ownership. The propensity scores were grouped into deciles of the estimated propensity score in the frame and post-stratified according to these deciles.

The weights were then post-stratified on 2024 presidential vote choice as well as a four-way stratification of gender, age (4-categories), race (2-categories), and education (4-categories), and a single post-stratification on home ownership to produce the final weight.

The weighted Gen Pop sample was then subsetted on registered voters and Likely Voters and trimmed and recentered to create a Likely Voter weight.

Sample size: 800 with a credible interval of +/-4.23 percentage points. This survey has an estimated design effect of 1.22 and the Likely Voter population had a

credible interval of +/-4.48.
