[**Corrections:** Headers for current state of race relations (Table A38) by race of respondent were flipped but have been updated to reflect the accurate headers. Observations for the generic congressional ballot (Table A46) by Urban/Rural/Suburban were updated to the correct count.]

About the Study:

American Politics Research Lab

The American Politics Research Lab (APRL) is housed in the Department of Political Science at the University of Colorado Boulder. APRL is a non-partisan academic unit that supports basic research, educational activities, and public engagement on issues related to American politics. Lab faculty, student fellows, and affiliates pursue scholarly activities over a broad range of topics, utilizing a wide variety of research methodologies and analysis. Current lab projects include research on political behavior, state and local politics, and political agendas and recurring legislation in the U.S. Congress. The Lab is also home to the annual Colorado Political Climate survey. APRL hosts a seminar series that includes talks by lab associates as well as distinguished scholars doing work related to the study of American politics.

Colorado Political Climate Survey

In November 2017, the American Politics Research Lab (APRL) conducted the second annual Colorado Political Climate (CPC) survey. The CPC is a survey of the political and policy attitudes of Coloradans. The study is designed to gauge the public's political and partisan leanings, their opinions on a number of key issues facing the state, their attitudes toward major statewide and national political figures, and the outlook for the coming 2018 election season.

Methodology

The sample is representative of the Colorado population. It consists of 800 individual responses and has an overall margin of error of +/- 3.5%. The margin of error for subgroups is larger due to smaller sample sizes.

The survey instrument was developed by APRL in the fall of 2017; it was administered online to a panel of Coloradans by the company YouGov between November 9-15, 2017. To generalize to the state of Colorado, YouGov employed a matching weighting procedure – 950 panelists initially completed the online survey. These 950 individuals were then weighted to match Colorado on demographic characteristics, leaving a slightly smaller sample of 800 (weighted) responses for analysis. We use YouGov's weights for all analysis. The average time it took a respondent to complete the survey was 10 minutes, 11 seconds. The sampling methodology employed by YouGov for the 2017 CPC survey can be found:

https://www.colorado.edu/lab/aprl/sites/default/files/attached-files/2017_cpc_yougov_samplingmethodology.pdf

In the sections that follow, we report some basic analysis, comparing responses to questions repeated across 2016 and 2017. Please note that some caution is warranted in making comparisons between the 2016 and 2017 studies due to differences in sampling/survey methodology. More information on the 2016 study can be found at: https://www.colorado.edu/lab/aprl/sites/default/files/attached-files/colorado_political_climate_topline_report_2016.pdf

Acknowledgements: We would like to acknowledge the undergraduate students in the Survey Design and Analysis class at the University of Colorado Boulder who provided valuable assistance in the development and execution of this survey. We also wish to thank the CU Boulder College of Arts and Sciences, Undergraduate Education Development Program for its financial support.

Summary: Partisan Politics as Usual

At the end of 2017 we saw a Colorado largely in-line with national opinion, and with familiar narratives concerning division and partisanship. Residents of the Centennial State firmly disapprove of Trump, overwhelmingly dislike Congress, and give a sizable edge to Democrats in a generic congressional election ballot as we look to November 2018.

At the same time, whether examining state-specific or national matters, on everything from approval of elected officials to opinions on marijuana policy and climate change, we see substantial differences between Democrats and Republicans. A notable exception is belief in the integrity of elections, where a majority of Democrats and Republicans both report confidence that votes are counted fairly.

Colorado Political Landscape

1. General Impressions and National Political Figures

In both years of the survey, the number of Coloradans identifying as Democrats outpaced the number identifying as Republicans (Table A1). While it remains to be seen whether Colorado is truly shifting from “purple” to “blue” in the longer term, our numbers from the past two years would seem to be consistent with such a trend.

Approval of the U.S. Congress by Coloradans is quite low and reflects similar national sentiment (Table A11). Only 14% of respondents approved of the job performance of Congress, and this is down from what was already a low approval rating for the U.S. Congress among Coloradans in 2016. We see few differences by partisanship when it comes to disapproval of the legislative body on Capitol Hill (Table A12).

There was a much more dramatic shift in Coloradans’ assessment of presidential job performance (Table A2). Whereas a majority (57%) of state residents either approved or strongly approved of Obama’s job performance in 2016, that number dropped to 34% approval for Trump in our 2017 study. Those strongly disapproving nearly doubled from 26% to 51%. As we might expect, large differences emerge if we break this out by partisanship – almost every Democrat disapproved of Trump’s job performance (95%), while a strong majority of Colorado Republicans approved of Trump’s first year in office (79%; Table A3). There is some suggestion of a gender gap in support for Trump, with more men expressing approval or strong approval than women (38% vs. 32%; Table A4).

Despite 2016's narratives concerning voting fraud and election tampering, a clear majority (59%) of Coloradans feel their votes are counted fairly always or most of the time, and there is no discernable difference in this opinion between Democrats and Republicans (Table A9). Interestingly, those Coloradans most approving of Trump's presidential performance are also very confident that their votes are counted correctly (Table A10).

2. Colorado Political Figures

Governor John Hickenlooper saw a small dip in his job approval from 2016, but a majority of Coloradans (53%) still approve or strongly approve of his work in office (Table A5). Senator Michael Bennet also saw a drop in his job performance rating from 2016, with less than a majority of his constituents (44%) approving of his work for them (Figure 1; tables A6 & A7).

Figure 1: Approval of United State Senators from Colorado

Source: 2017 Colorado Political Climate Survey % "Not Sure" Not Displayed

Senator Cory Gardner, however, saw the biggest change in job approval among statewide elected officials. Only a quarter of Coloradans approve of his job performance in 2017, a sizable drop from his 43% approval rating in 2016. Not only is Gardner's overall approval ratings very low among Democrats (12%) -- as we might expect -- but he scores quite poorly among Independents (23%) and even lacks majority approval among Republicans (46%; Figures 1 and 2; Table A8).

Figure 2: Approval of Senator Gardner by Political Identification

Source: 2017 Colorado Political Climate Survey. % “Not Sure” Not Displayed

3. Approval of State Government and Trust in Government

Approval of the job performance by the state legislature has fallen somewhat from 2016 (Table A14). Whereas a slim majority (51%) of Coloradans previously approved or strongly approved of the work of state lawmakers, that approval has dropped to 43%. Approval of the state legislature is far greater among Democrats (60%) than it is among Republicans (27%; Table A15).

As gauged by whether people trust government to do what is right “most of the time” or “always,” trust in local and state government saw little change across years (Table A17). Mirroring patterns found elsewhere, Coloradans express the least trust towards the federal government and the most trust towards local government, with support for state government sitting in-between (Table A16). A plurality in 2017 report trusting the state government “most of the time.” Interestingly, trust in the federal government seems to have diminished sizably since 2016. Those who said they trust the federal government always or most of the time dropped from 1-in-4 to 1-in-10.

4. Policy Issues

For the second year, Coloradans in 2017 viewed the economy and health care as the most important issues facing the nation, though in a switch from 2016 a quarter saw health care as most important (Table A20). Rounding out the top four named issues are national defense and immigration. Respondents in more rural areas of Colorado named crime an important national issue at higher rates than did suburban and urban respondents (Table A21).

When asked about the most important issue facing the state of Colorado, crime gets added to the mix of familiar issues by respondents (Table A22). Health care, while still a top issue, does not have the same prominence at the state level as it does when respondents report on national priorities. Looking at responses by location, rural residents see health care as far and away the most important issue facing the state, while in a switch, Coloradans in urban areas see crime as the greatest concern for the state (Table A23).

We also asked Coloradans their specific opinions on a wide array of state and national issues. Here's what they said:

Marijuana

The recent announcement by the Justice Department regarding its approach to state marijuana laws puts Colorado's legalization of recreational pot front and center in coming elections. Notably, for the second year in a row two-thirds of Coloradans favor the current approach to legal marijuana (Table A26). Democrats heavily favor the current pot law, with a notable increase in Democrats who strongly favor the statute (Figure 3; Table A27). Opinion among Republicans remains largely unchanged from 2016.

Figure 3: Support for Colorado's Recreational Marijuana Law by Partisanship

Source: 2017 Colorado Political Climate Survey. "Not Sure" % Not Displayed

Taxpayer's Bill of Rights (TABOR)

On TABOR, support among Coloradans outpaces opposition (45% to 26%; Table A28). Supporters are down about 8% from 2016, though in both years a substantial portion of the public expresses uncertainty about a position (nearly 30% of respondents in 2017). Despite its notoriety, TABOR would appear to remain a "hard" issue for which many are hesitant to offer an opinion.

Health Care

Half of Coloradans support a single payer health care system, which is slightly below the national average (Table A29).¹ Not surprisingly, this gets far more support among Democrats than Republicans (Table A30).

Gun Control

Over 60% of Coloradans favor increased federal gun control measures, which is nearly identical to the national average (Table A31).² As we might expect, there is much higher support for stepped-up regulation among Democrats than Republicans (Table A32).

Immigration

Overall, just under three-quarters of Coloradans (71%) favor allowing “Dreamers” to stay in the country (Table A33). Broken out by partisanship (Figure 4; Table A34), the issue gets sizable support from Democrats and independents. Moreover, even a majority of Republicans (52%) express support for a DACA-type policy, which coincides with the overall popularity of the program.

Figure 4: Support for Dreamers by Partisanship

Source: 2017 Colorado Political Climate Survey. “Not Sure” % Not Displayed

Climate Change

Half of Coloradans reported being concerned or very concerned about climate change – a percentage that is comparable to 2016 (Table A35). As we might expect, the numbers break out quite a bit differently by partisanship, with most Democrats

¹ <http://www.pollingreport.com/health.htm>

² <http://www.pollingreport.com/guns.htm>

expressing concern (72%), but only a minority of Republicans (20%) reporting the same (Table A36).

Race Relations

Three-quarters of Coloradans see race relations being somewhat or really bad (Table A37). Interestingly, the percentage of whites that think its bad (74%) is nearly identical and maybe even higher than the same percentage of minorities (72%; Table A38).

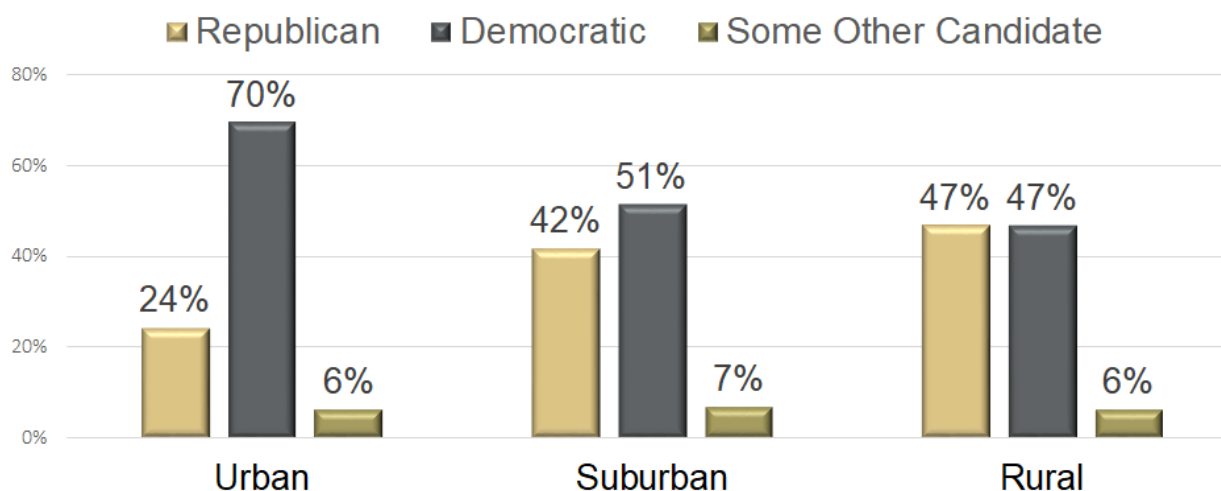

Corporate Tax Incentives

A majority of respondents (56%) express support for tax incentives to entice large companies like Amazon to locate their business in Colorado (Table A39).

5. Elections

Looking toward the 2018 midterm elections, our survey corresponds with other polls in providing Democrats with reason for optimism.

Figure 5: Generic Congressional Ballot Party Support by Area of Colorado

Source: 2017 Colorado Political Climate Survey

Using the “generic” congressional ballot, Coloradans are more likely to support a Democrat than a Republican by nearly twenty percentage points, and that gap has widened considerably since 2016 (Table A45). The 56% support for Democrats in Colorado is also slightly higher than the national average of about 48%.³ While it is not unexpected that there is a wide gulf between Trump supporters and detractors on this question, the depth of that division has grown since 2016. Not surprisingly, Democrats

³ <http://www.pollingreport.com/2018.htm>

fare better in urban and suburban areas of the state, while as of now it's dead-even between the two parties on the generic ballot in rural sections of Colorado (Figure 5; Table A46).

It is still very early, possibly too early, to tell how the gubernatorial primaries will shake out. "Undecided" is clearly the leading candidate, registering majorities in both parties (Table 1). Beyond that, the only candidates receiving even double-digit support are the two with the greatest name recognition in the state: Rep. Jared Polis (24% among those saying they would vote in the Democratic primary), and Former Rep. Tom Tancredo (25% among Republicans).
