================================================================================
Project Code: COLO0006
Project Name: 2020 Survey of Colorado
Prepared for: University of Colorado, Professor Anand Sokhey
Interviews: 800
Field Period:  October 05, 2020 – October 09, 2020
Project Manager: Ashley Grosse – 650.714.0751
================================================================================
```

YouGov interviewed 905 Colorado adults who were then matched down to a
sample of 800 to produce the final dataset. The respondents were
matched to a sampling frame on gender, age, race, and education. The
frame was constructed by stratified sampling from the 2018 American
Community Survey (ACS) 1-year Colorado adult sample with selection within
strata by weighted sampling with replacements (using the person weights on
the public use file).

The matched cases were weighted to the sampling frame using propensity
scores. The matched cases and the frame were combined and a logistic
regression was estimated for inclusion in the frame. The propensity
score function included age, gender, race/ethnicity, years of education,
and region. The propensity scores were grouped into deciles of the
estimated propensity score in the frame and post-stratified according to
these deciles.

The weights were then post-stratified on 2016 Presidential vote choice, 2016
primary vote, bornagain status, and a four-way stratification of gender, age
(4-categories), race (4-categories), and education (4-categories), to
produce the final weight. Benchmarks for born again were obtained from the
2014 Pew Religious Life survey.

In an alternate weight, several likely voter profiles were given a slightly
extra weight while unlikely voters were weighted down.
