Project Code: COLO0008
Project Name: Fall 2021 Survey of Colorado
Prepared for: Anand Edward Sokhey, University of Colorado Boulder
Interviews: 800
Field Period: October 15, 2021 – November 02, 2021
Project Manager: Ashley Grosse – 650.714.0751
================================================================================
```

Colorado General Population Weights

YouGov interviewed 936 Colorado adults who were then matched down to a
sample of 800 to produce the final dataset. 677 of those respondents are
likely voters.

The respondents were matched to a sampling frame on gender, age, race, and
education. The frame was constructed by stratified sampling from the 2019
American Community Survey (ACS) 1–year Colorado sample with selection within
strata by weighted sampling with replacements (using the person weights on the
public use file).

The matched cases were weighted to the sampling frame using propensity
scores. The matched cases and the frame were combined and a logistic
regression was estimated for inclusion in the frame. The propensity
score function included age, gender, race/ethnicity, years of education,
and region. The propensity scores were grouped into deciles of the
estimated propensity score in the frame and post–stratified according to
these deciles.

The weights were then post–stratified on 2016 and 2020 Presidential vote
choice, and a four–way stratification of gender, age (4–categories),
race (4–categories), and education (4–categories), to produce the final weight.

Colorado Likely Voter Weights

The likely voter portion of the sample was weighted to a sampling frame
constructed from the 2020 Current Population Survey (CPS) Voting and
Registration supplement. The likely voters were weighted using propensity
scores. The propensity score function included age, gender, race/ethnicity,
years of education, and region. The propensity scores were grouped into deciles
of the estimated propensity score in the frame and post–stratified according to
these deciles.

The weights were then post–stratified on 2016 and 2020 Presidential vote
choice, and a four–way stratification of gender, age (4–categories),
race (4–categories), and education (4–categories), to produce the final weight.
