

9/21/18 - GoPIG meeting at Talking Books

- Attendees: Kate Tallman, Ron Koch, Samantha Hager, Yessa Hargono, Phil Wrede, George Machovec, Naomi Lederer, McKinley Sielaff, Jennifer Leffler, Debbi MacLeod, Erik Beck, Dawn Combe, Kelly McCusker, Nick Harrell, Carole Griffin, Nicole Becwar
- Started at 10:03 AM with reading and discussion of 11th amendment
- Next meetings: November 2nd at CU-Boulder, December 7th at Regis, February [TBD] @ Auraria
- FDLP modernization legislation discussion (chance of bill surviving/getting resubmitted in next congressional session)
- Alliance director's meeting (CAL) conversation about diversity working group - involve GoPIG in somehow? (via McKinley, more from George) -> Debbi relays information about implicit bias workshop @ CAL (workshop will be presented to State Library staff in November). Debbi will follow-up with the implicit bias group and inquire about hosting a training session at the Regis GoPIG meeting
- George Machovec presentation on Gold Rush tool (CARL)
 - "Analytics Tool" originally developed for Alliance Shared Print Trust – Catalog Comparison
 - Effective management of legacy print collections (overlapping collections, independently managing collections and discarding materials without knowing who has what)
 - "Preserve intellectual record w/ local emphasis"
 - Similarities to FDLP needs and offers policies
 - bit.ly/2ti5Wfv
 - "Make informed de-selection decisions"
 - It's easy to declare intent to retain a title (stuff in PASCAL, collections important to institution, committed collections etc...) -> make it easier for everyone else to see what you're keeping
 - Gold Rush dates back to 2003 (eventually built to include a content comparison system for journal subscriptions)
 - Matching algorithm doesn't rely on OCLC numbers or ISBN/ISSN
 - grcompare.coalliance.org
 - Match key with MARC record (see handout)
 - can create facets for more specific searching; this now includes SuDoc's
 - Can add/update records by uploading through secure FTP
 - Tables & charts for comparisons in reporting function
 - 583 fields for retention commitment notes
 - Sample use cases include: space analysis, comparing holdings for campus program resources, holdings analytics (purchasing info?),
 - Questions from CARL
 - How deep do we index sudocs? (speed vs useful depth)
 - Mismatches (due to spacing, RDA vs non-RDA, etc)
 - "Erring on the side of differentiation" vis-a-vis items in different formats
 - Adding SuDoc stems to facet data
 - Alliance/Prospector member library records are loaded for no cost
 - others are loaded at a cost 1K/1 million records
 - Demo
 - 15-20 seconds to log in from the get-go (working on it)

- Limit to “colorado_wyoming” collection to look at material in our area
 - “view indexing history”
 - “export records”
 - (via Kate & Naomi – questions about shipping list date vs. publication date for potential discards)
 - “save search”
 - Handout containing log-in info
 - Gold Rush can be used as a database rather than a comparison tool (see who has what in which ranges of numbers)
 - To limit results to specific publishers, you have to search by publisher name (within quotes) -> there are too many publishers to have a facet for them
 - everything hotlinked in the search results can be exported
 - Are you interested in single item lookups? Use Prospector
- Preservation steward facet for gov docs? It depends on what 583 subfield is used.
- Kate as point of contact to communicate GoPIG ideas and needs from Gold Rush
- Feedback for Gold Rush @ next meeting
- What about docs w/ multiple SuDocs (via Carole)? Promise to look into answer
- Debbi MacLeod
 - Marrakesh Treaty (going through ratification, US signed on in 2013 but hasn’t ratified)
 - Approved by Senate, has to go through House (stalled at the moment)
 - Debbi forwarded a message to cogopub
 - Concerns, among other things, reproductions of books for print-disabled people, sharing of those reproductions across national borders
 - Talking Book Library: should significantly expand foreign language collection available to patrons, when it’s finally in effect in USA
 - GoPIG coming out in support of passing & ratifying the treaty?
- dlc/fdlp meeting attendees (Naomi, Kate, Erik)
 - meetings online
- FDLP eXchange update
 - Kate’s approval odyssey (“regional review” apparently means asking the regional if they want the offer)
 - return to review policy & timelines
 - experiment with the offer from UNC (decline/accept/going to selective review)
- library updates
 - CU-Boulder: new dean continues settling in (hasn’t met with Gov Info yet); Yessa started Monday, Kate accepted her permanent position; new mentee from other department in Norlin; Carole working to revamp item conversion process; space study; Info-Motion around the election
 - UCCS: stable staffing(!); Ron got a new gov docs student employee to work on eXchange spreadsheets
 - 10th circuit: new permanent director; need to take a serious look at the collection; library is open to the public for research
 - Auraria: new director (meeting w/ everyone, including student workers); resource management head interviews; looking to hire digital/special collections head; maps might be heading to PASCAL
 - CC: new library webpage; straightening out document stacks; various student projects; looking for new ILS, open positions: systems/digital scholarship, digital archivist
 - UNC: digging into docs; new university president; everything is currently frozen

- CSU: speeding up new doc processing (legal compliance!); open searches: head of digital unit, science librarian, data, serials librarian; Constitution Day displays
- CU Law: Session Laws collection in beta (now with full text search!); House & Senate journals up, too (keyword search); director on sabbatical
- State Publications: search for new state library director; expect to see a revised version of classification schedule in October; search for technical services specialist
- URLs in OCLC records for ERIC docs weren't working (via Ron) - ERIC changed URLs sometime back & discontinued the automatic redirect recently. Check your records (https now, no www.)!
