A Free Talk
For Parents, Caregivers, and Educators about Attention, Learning, and Behavior Disorders

“When should I be concerned?”

Tuesday, March 19, 2019
6:00 pm – 7:30 pm
Casey Middle School Auditorium
1301 High St, Boulder, CO 80304

❖ One of the most common questions parents, caregivers, and educators have regarding children’s development and behavior is, “Is this typical?”.

❖ Early intervention is key to treatment for many childhood disorders, but with such a wide range of behaviors at different ages, knowing when and where to seek help is challenging.

❖ This talk will summarize the most recent scientific information on attention, learning, and behavior disorders in children from experts in neuroscience, psychology, and child development to provide accurate, up-to-date knowledge about recognizing academic and emotional needs in children. Evidence-based evaluations and treatments will also be discussed.

Presenter Nomita Chhabildas, Ph.D. is a licensed clinical psychologist passionate about serving children and their families. She did her doctorate work at the University of Denver, where she specialized in neuropsychological assessment and emotional support for children with learning differences and medical needs. She has trained at the JFK Center for Developmental Disabilities and has worked with children on the autism spectrum doing specific behavioral treatment.
She was also a staff member in Children’s Hospital Colorado’s Department of Neurotrauma Rehabilitation, specializing in neuropsychological assessment with children with medical disorders and traumatic brain injury, as well as helping these children transition back into school and the community.

Currently, Nomita directs the University of Colorado Attention, Behavior, and Learning Clinic, which provides assessments to children experiencing academic or emotional difficulties. This clinic offers assessment of ADHD, learning disabilities, and other cognitive, emotional, and behavioral difficulties for children and adolescents. Select services are also provided to CU students and other adults. To obtain more information about these assessments, please call our intake line at 303-492-6351.

Her goal in these assessments is to help children learn more about their strengths, needs, and passions in order to help them thrive.

Co-presenter Erik Willcutt, PhD is a professor with the Department of Psychology and Neuroscience and a Fellow of the Institute of Behavioral Genetics, and faculty of the Center for Neuroscience at the University of Colorado Boulder. Erik directs the Developmental Psychopathology Lab and the Eunice Kennedy Shriver National Institute for Child Health and Human Development Colorado Learning Disabilities Research Center.

**Full schedule of 2019 Brain Awareness Week events @**
