

# Meet Russ

I'm Russ Andrews, and I've called Colorado home since 1994 when I moved here with my wife of (now) 40 years Lori, and three children. My journey has been one of dedication, diverse experiences, and a commitment to serving our community.

## A Diverse Career

I pursued my Bachelor of Engineering in Marine Engineering (B.E.M.E.) at SUNY Maritime College at Fort Schuyler. I was proud to become the first cadet in three years to achieve a perfect score on a U.S. Coast Guard test, demonstrating my commitment to excellence.

After graduation in 1983, I ventured into the marine technology sector, advising the Navy on vital programs and design processes. Later, I joined

Texaco Marine Services as a Third Engineer on a T2 oil tanker. In 1987, I transitioned to the world of finance, joining Merrill Lynch as a financial adviser. Today, after 36 years, I still passionately serve clients in the financial sector.

## Why I'm Running

I am an engineer by education; we use math, facts, and logic in order to solve problems. Colorado's 3rd Congressional District currently has several math problems that are growing exponentially worse due to the failed leadership from Lauren Boebert. We are at risk of losing this seat to Democrat control. The math shows that she can not win in a general election against Adam Frisch. I am a common-sense conservative focused on actual republican values - God, country, family, and retention of our property rights. I have unique solutions to issues that plague our district, our state, and our nation. Our economy is dismal. I recognize what causes inflation and what stimulates economic growth - I understand that the two are mutually exclusive; I am running to restore the balance. My passion is rural Colorado and I will fight to serve our constituency with drama free solutions.
