

# Actuarial Studies and Quantitative Finance Certificate Program

## *Application for Admittance to Actuarial Studies Track*

### Provisional Admittance

If you are currently taking your third semester of calculus, you can be admitted provisionally to the Actuarial Studies Track if you have scored a B+ or better in Calculus I and II, and you have a note from your instructor stating that you are currently doing B+ or better work in Calculus III. Provisional admittance will make it easier to enroll for some courses, but you will be dropped from the Actuarial Studies track if you do not actually earn a B+ or better in Calculus III.

### Admittance in Full Standing

To be admitted to the Actuarial Studies Track of the Certificate Program, you must have completed Calculus I, II, and III with a grade of B+ or better in each. If you have been given credit for AP exams in calculus, you must have scored 4 or better on the BC test, or have gotten a 5 on the AB test. If you have transfer credit in calculus, you must have gotten a B+ or better in each transferred course. A student may also be admitted by passing the first examination of the Society of Actuaries. Alternatively, if a student has a GPA of 3.0 or greater in calculus I, II, and III, then they can earn admission by getting a grade of A- or better in linear algebra or mathematical probability.

### Application Process

Complete the form below and take this form, a copy of your transcript and documentation of your advanced placement exam score (if applicable) to meet with a program advisor to map out your required coursework and determine and verify the feasibility of completing the program. Your advisor will then submit the application to the program committee for approval.

In signing this form, you agree to give the program access to your academic records.
