

BIOFRONTIERS SEMINAR

Leveraging advances in biomedicine toward the development of the clean meat industry

Thursday
November 29th
3:00 – 4:00 pm
JSCBB B115

- This seminar covers advances and challenges in regenerative medicine, genetic engineering, bioengineering, and large-scale bioprocessing technologies.
- Utilization of stem cells to grow muscle and fat tissues *in vitro* for consumption offers an opportunity to disrupt animal products.
- Clean meat products can be safer, generate health and environmental benefits, taste great and be cost competitive with animal products.
- Life science companies, research universities and start-ups are building this new industry.
- GFI is helping to create centers of excellence at universities and initiated a grant program to support the research this fall.

Elliot Swartz, Ph.D.
