

HOW TO USE THESE AAC MULTIMEDIA TRAINING MODULES

01

Consider a client/family member/patient/student

Whether you will use these modules individually or with a group/team, consider a client/family member/patient/student who cannot rely on natural speech for daily communication. Most likely, they could benefit from an AAC assessment and/or intervention. There will be 5 modules total. Start with module 1 for the introduction and overview.

02

Watch videos provided in the modules

The videos included in each AAC multimedia module are a starting point. Brief explanations and examples of how to implement the evidence based AAC assessment and intervention strategies are included in these videos.

03

Read through the PDF Documents

The PDF documents are numbered in the order that they are mentioned in each video. The PDF documents that begin with “Xtra” are extra resources that may be beneficial as they are related to the topic of the module in which they are saved.

04

Implement, Celebrate Progress, and/or Problem Solve

Implement the AAC assessment and/or intervention strategies with your client/family member/ patient/student. Collect data on outcomes. Celebrate progress and/or make adjustments as needed. Show appreciation for any positive changes that result from the work you have done. A growth mindset will be helpful!
