

## Clearly Speaking

Clearly Speaking is a comprehensive training program for individuals who speak English as a second language and want to modify their pronunciation of spoken English or improve their ability to be understood by others.

## YACHT Club

Young Adults [with aphasia] Communicating Together (YACHT) Club consists of a group of young adults coping with the language and speech disorders caused by stroke and head injury. The goal of the group is to assist clients in becoming better communicators.

## Hears' to You

Hears to You is a program for people with hearing loss, as well as communication partners of people with hearing loss, to learn about simple, manageable techniques and tools to help improve communication.

## Individual Therapy Services

Adults living with cognitive, language, and/or speech disorders may benefit from individual intervention services. After an assessment, an appropriate intervention plan is designed to incorporate the individual's strengths to meet functional goals identified in consultation with the client and family. Frequency and duration of sessions are determined on an individual basis.

## Adult Language and Cognitive Assessment

This assessment is for individuals with changes in communication or thinking resulting from stroke, brain injury, or degenerative neurological conditions. Assessments are targeted to help guide intervention opportunities for communication and thinking as well as to offer support strategies for conversational partners.

## Adult Speech and Voice Assessment

The speech and voice assessment involves perceptual and instrumental measurements of respiration, phonation (including pitch, loudness and voice quality), resonance, articulation, prosody and speech intelligibility. Assessments typically include stimulability testing (probing of possible therapeutic techniques) to determine response to intervention and recommendations for appropriate treatment.

## Loud Crowd

Loud Crowd is an individual and group therapy program designed to help individuals with motor speech challenges improve speech intelligibility and communication success. Loud Crowd meets once per week for 1.5 hours.

## LSVT (Lee Silverman Voice Treatment)

LSVT LOUD is a clinically-proven program for improving voice and speech in individuals with Parkinson's disease or other neurological conditions. LSVT LOUD improves respiratory, laryngeal and articulatory function to maximize speech intelligibility. Treatment is administered 4 times per week for 4 weeks (16 sessions).
